RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterisk* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal

Saturday, June 26, 1869.

Stock Exchange and Money Market.

Money has been in brisk demand, all through the week, especially among the Stock and Gold brokers who have found considerable difficulty in negotiating for accommodation, and who have been generally compelled to pay usurious rates for temporary aid. The extremes on call loans have been from seven per cent. currency to a few of the heaviest dealers in the public funds to as high as an ⅛th of one per cent. per day to the neediest of the street borrowers, which rates prevailed up to the close, impeding speculative operations, and seriously prejudicing the claims of legitimate business enterprises to the favor of lenders. The discount market has been unusually tame and nominal. Only the very choicest selections of commercial paper have been marketable to any considerable amount, and these have been rated at from 8@10, more generally at ten than at eight per cent. per annum. While the Sub Treasury made a further addition of nearly two millions to its coin and currency balances, partly through the excess of income from excises and customs over expenditures on regular accounts, and partly from the unemployed surplus proceeds of the gold sales over the bond purchases, the city banks have shown a further loss of resources, making another unfavorable weekly exhibit, though less decidedly so than hadbeen looked for. The deposits showed a falling off of $7,644,795; and the legal-tender reserve a loss of $1,246,770. The loan averages exhibited a contraction of $6,641,829. A reduction of $28.136 in the specie item, and an increase of $54,039 in the circulation were also noted. The legal tender reserve is now down to less than 50 millions, against nearly 58 millions five weeks since, and full 72½ millions at this date last year. The specie hoard is well maintained. The deposits are now as low, however, as about 186¼ millions, against 203 millions on the 29th of May, and 211½ millions this time a year ago. The loans are now about 265⅜ millions, against 276 millions on the 5th of June; and 274⅛ millions this date in 1868. The circulation shows but little change of moment. The U. S. Sub Treasury has gained about eight millions of coin and currency, chiefly the latter, since the beginning of June. Washington advices now place the aggregate currency reserve of the Treasury Department above thirty millions, showing a very rapid accumulation, in this form, since the 1st inst. On Tuesday it was formally announced that after the 1st of the coming month of July, the Secretary of the Treasury will buy a million U. S. Five-twenties, and sell a million of gold, each alternate week, until further notice, beginning the purchase of a million of Five-twenties on Thursday the 1st of July, and the sale of a million of gold, on Thursday, the 8th of July. The announcement has led to a rather notable revival of confidence in the future of Bond and Stock values, stimulating operations for a rise, though Money continued in quick request for speculative uses at extreme figures.

The specie reserve of the city banks according to the latest return is $19 025,444, against $9,124,830 same time last year. The city bank deposits are now $186,244,110, against $211,484,387 week ending June 20 1868. The legal tender reserve amounts to $49,612,488, against $72,567,582 same time last year. The circulation now stands at $34,198 829, against $24 119,120 same time last year. The loans are now $265,341,906, against $274,117,608 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $139,370,671 a day, against a daily average of $142,667,774 the preceding week, and $127,713,504 the week ending with June 2, 1869. The current week's exchanges average about $126,612 500 a day. The city banks, last week, reported a loss of $28.136 of specie, $7,642,795 of deposits, and $1,246,770 of legal tender notes. They reduced their loans, $6,641,829; and increased their circulation, $54,039.

The city bank exchanges on Wednesday were $124,064,105, and the resulting balances, $3,216,862.

It is confidently believed that the July dividends upon the Stocks of the United States and the Bonds of the Pacific Roads in Gold will be larger than last year, and the Currency Dividends upon Bank Stocks, Railway Bonds and Shares and various other investments will also be in excess of the corresponding Dividend period of 1868.

National Bank notes to the amount of $95,100 were issued last week by the Treasury Depart-

ment, making the total issue to 1,685 banks thus far, amount to $316,020,128, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $16,161,434, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,858,694. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,882,200; and for the public deposits, $27,538 850—making a total of $370,421,050. The Treasury Department last week redeemed and destroyed $294,000 of worn and mutilated fractional currency, and issued $95,100 of new. The outstanding amount of fractional currency on the 1st of June, was $33,452,523 against $35,330,323, on May 1, $36,719,912 on the 1st of April, $36,781,548 on March 1, $35,511,127 on February 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week endin with June 19, were $12,829,095, including $1,942,911 from customs duties; payments, $10,860,103, including $242,414 of coin interest; balance at the close of the week, $84,476,809, against $82,507,817 at the close of the preceding week, showing an increase of $1,968,992. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $4,402,110, including $360,000 from customs; payments, $3,862,162, including $43,019 of coin interest. On Tuesday, receipts, $2,370,692, including $317,000 from customs, and payments $1,357,527, including $23,010 of coin interest. The balance at the close of business on Tuesday stood at $86,029,923, against $85,195,977 a week previous; and $80,506,697 on June 9, 1869. The aggregate receipts of the office in May were $53,236,435, including $10,034,613 from customs, aggregate payments, $00,202,733, including $13,681,439 of coin interest.

The outstanding amount of coin certificates on the 1st of May, was $16,307,200, against $21,672,500, April 1, $28 775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $3,604,000, and retired $1,845,910 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during May, reached $10,606,080.

Government revenues have been quite prolific since our last, in the form of excises, though moderate in the yield of the customs. The excises, last week, yielded about 7 millions; customs at the port of New York, $1,942,911, and at the outports about $650,000 (in coin) more, making the grand total income for the week equal to about $10,565,253 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about $160,000,000, according to the latest Washington advices. The customs yielded, same time, about 174½ millions in gold.

The yield of the excises on the first day of the current week was $1,032,000.

In the Gold speculation, more actively has been noted but at variable rates, the range having been from 136¾ to 138⅛, and the closing quotation on Wednesday 137⅛. The Money pressure has been working severely against the interests and manipulations of the operators for an advance in the premium, yet they have shown remarkable confidence, and have been unexpectedly successful in their efforts to resist, or arrest, the downward tendency of the market. On Monday, the award of the whole million of government gold was made at 136.76 to the Messrs. Marvin Brothers & Co. The aggregate of the bids was $3,870,000, and the range, $136.03@136.76. There has been very little of any export call for gold. The past week's shipments were only $101,102. The *Cimbria* on Tuesday took out $129,000 in specie for Hamburgh. The customs drain has averaged quite moderately, barely equal in their weekly aggregate for this port in the weekly sales of Government coin.

The following is the statement of the New York Gold Exchange Bank for the week ending Saturday, the 19th day of June, 1869:

Average am't of loans and discounts	$1,707,281 71
Average amount of specie	1,046,770 33
Average amount of deposits	1,980,495 37

The Gold Exchange Bank clearances on Wednesday were $118,120,000; and the resulting balances $3,282,235 in coin and $4,565,592 in currency.

The New York Gold Exchange Bank has declared a dividend of eight per cent., payable on July 1.

The customs of the port on Wednesday yielded $416,000. The U. S. Sub-Treasury disbursed $34,781 of coin interest, on that day.

The customs demand for Gold last week, averaged $323 818 a day; thus far, this week, it has averaged $338,500 a day, or equal to a weekly aggregate of $2.031,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $54,764, and since Jan. 1, $8,862,650, against $3,399,931 same time in 1868. The receipts from California, since our last, have been $122.505. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $121,768,718, against $111,129,794 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to June 11th, 1869, $3,216,814, against $3,557,651 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $19,231,237, against $34,742,562 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $15,511,325. The exports of specie, from this port, last week, were $101,102, against $1,850,432 same week last year; total, since July 1, 1868, $35,885,929, against $72,879,605 in 1867–'68 Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $242,414; since July 1, 1868, $86,973,586, against $73,225,637 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to June 11, 1869, were $18,432,307, against $16,696,090 same time in 1868.

Foreign exchange has not been offered very freely, and has been quoted firm most of the week, though inquiry for it has not been remarkably active. Bankers' prime sixty day bills on London closed on Wednesday at 109¼@ 109⅝, and on Paris to 5.22½@5.16¼; sight bills on London to 109⅞@110⅜, and on Paris to 5.16¼c @5.13¾. The offering of produce bills has been again very extensive this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $4,427,531, against $2,670,477 same week last year; total, since July 1, 1868, $166,695.119, against $175,365,706 same time in preceding fiscal year of 1867–'68.

Government securities have not been offered very freely, yet under the stringency in money, prices have further yielded a fraction, though there was a partial rally on Tuesday, on the announcement of the modification of the financial policy of the Secretary of the Treasury for the coming fiscal year. Wednesday's dealings were on a restricted scale, and the market closed barely steady.

The government bought $1,620,000 of 6 per cent. 5 20 bonds on Wednesday at prices as fol- $100,000 1867 coupons at 115.45; $100,000 1867 coupons at 115.44; $100,000 1867 coupons at 115.43; $100,000 1867 coupons at 115.42; $100,000 1867 coupons at 115.41; $250,000 1867 coupons at 115.48; $250,000 1867 coupons at 115.50; $46,000 1867 coupons at 115.53; $20,000 1867 coupons at 115.14; $15,000 1867 coupons at 115.14; $70,000 1862 registered at 115.30; $30,000 1867 coupons at 115.32; $10,000 registered at 115.30; $100,000 1867 coupons at 115.49; $100,000 1867 coupons at 115.50; $100,000 1867 coupons at 115.51; $100,000 1867 coupons at 115.52; $19,000 1867 coupons at 115.53; $10,000 1867 registered at 115.53.

U. S. sixes of 1881 closed here on Wednesday at 121@121¼; U. S. Five-twenties of 1862, ex-coupon, 122@122¼; U. S. Five twenties of 1864 at 116¾@117; U. S. Five-twenties of 1865 at 118@118⅛; U. S. Five-twenties of 1865, consolidated, 119⅛@119⅝; U. S. Five-twenties of 1867, 119⅜@119½; U. S. Five-twenties of 1868, 119¼@119½; U. S. Ten-forties at 108@108⅛; U. S. Six per cent. currency bonds, 105⅞@106¼.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	June 9.	June 16.	June 23.
Consols	92¾	92½	93@93⅛
U. S. 5-20's of 1862	80⅝	80⅞	80¾

Ill. Central	94½	95	95
At. & Great Western.	25	....	..

Under the activity and dearness of Money the railway and miscellaneous share speculation has been quite variable both as regards volume, and values; but the later transactions on Tuesday and Wednesday showed a substantial gain of strength, on a more confident bidding.

Business has been decidedly brisk in Breadstuffs, largely for export at firmer prices; but in most other kinds of Domestic Produce, the movements have been restricted and the general market has been depressed. Middling upland cotton closed heavily on Wednesday at 33 cts. per lb. The stock of cotton now here is estimated at about 26,500 bales. The receipts at the port this week, have averaged about 2,250 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,251,000 bales, against 2,307,000 bales same time in 1867–8; exports, same time 1,395,000 bales, against 1,668,000 bales same time in 1867–'8; stock on hand at latest dates, 110,000 bales, against 112,000 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total export

thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 14,468 pkgs., against 11,379 pkgs., same time last year. From Boston, 4,218 pkgs., against 6,073 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in stock demand, at from 13@16c., per lb.; week's receipts, 7,197. Milch cows, neglected at from $40@$110 each, receipts, 105. Veal calves in less request at from 5@11½c. per lb.; receipts, 2,798. Sheep and lambs less active and depressed at from 4@7½c., per lb.,; receipts, 28,298. Swine in demand but closed weak at from 9@9¾c. per lb.,; receipts, 23,970.

Foreign merchandise has been generally quiet, and weak in price. The total imports of foreign dry goods, last week, were $861,495, and the total amount marketed $849,849. The value of foreign merchandise imported last week, was $5,494,236—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $6,355,731, against $4,465,888 same week last year; total since July 1, 1868, $275,400,449, against $232,028 838 in 1867–'8.

Ocean freights have shown more activity and firmness. For Liverpool we quote flour at 1s. 9d. @2s. by sail, and 2s. @2s. 3d. by steamer, per bbl.; grain at 7@7½d. by sail, and 8d.@8½d. by steamer, per bushel; cotton at $\frac{5}{32}$@$\frac{3}{16}$d by sail, and ¼@$\frac{5}{16}$d. by steamer, per lb.; and heavy goods 17s. 6d.@35s. by sail, and 22s. 6d.@40s. by steamer, per ton. Total number of vessels in port on Wednesday, 476.

The New York exports, exclusive of specie, for the week ending June 22, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week.....	$2,670,477	$4,427,531
Prev. reported.....	80,404,521	79,535,422
Since January 1.....	$83,074,998	$33,962,953

The imports for the week ending June 19, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods.....	$960,023	$861,495
Gen. merchandise.....	3,505,865	5,494,236
Total for the week.....	$4,465,888	$6,355,731
Previously reported....	111,016,220	145,963,584
Since January 1.....	$115,482,108	$152,319,585

The balance in the Sub-Treasury on Wednesday was $86,017,049 31.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—South Carolina 6s new, 71½; Georgia 7s, 96; do., 6s, 83; ; Alabama 8s, 99½; N. Y. State Bounty Loan, reg., 108; do., 6s, 1874, 102; N. Y. City 6s, 1887, 91; Louisiana 6s, 72; do., 6s, Levee bonds, 67; New Jersey Central new bonds, 100; Hannibal and St. Joseph conv. bonds, 123; Am. ☞ EIGHT PER CENT. FIRST MORTGAGE BONDS, GUARANTEED BY THE STATE OF ALABAMA. PRINCIPAL AND INTEREST PAYABLE IN GOLD. The undersigned offer for sale the second installment of

ALABAMA AND CHATTANOOGA RAILROAD BONDS,

and call attention to the following facts:

1. The mortgage is limited to $16,000 per mile, issued only upon road built and equipped.

2. The road develops a section unsurpassingly rich in iron, coal, manufacturing facilities, and cotton, besides shortening the distance between New York and New Orleans 216 miles, and forming the shortest route possible between the two cities.

3. Since our last advertisement a donation of about 2,000,000 acres of land contiguous to the road has been confirmed to the Company by the United States Government, worth more than the entire amount of the first mortgage.

4. In the last month twenty miles of road have been finished, making seventy miles in operation, and the whole is under contract to be completed in twelve months.

5. These bonds are guaranteed by the State of Alabama, whose entire debt is less than $5,000,000, whose interest has always been promptly met, and whose Eight per Cent. Currency Bonds are now selling above par.

6. Both principal and interest are payable in gold.

7. The present price is par and accrued interest, in currency, the right being reserved to advance the price.

8. Ten thousand Five-twenties will purchase twelve of these bonds. The annual interest upon the $10,000 Five-twenties will be $600 gold.

The annual interest upon $12,000 bonds will be $960 gold. We confidently recommend these securities as the best and cheapest investment now on the market.

SOUTTER & CO., No. 53 William st.,
HENRY CLEWS & CO. No. 32 Wall st.

☞ Coupon No. 2, Pittsburg and Connellsville Railroad Company First Mortgage Bonds, will be paid on and after 1st July at the Merchants' National Bank of Baltimore.

From Herapath's Railway Journal.

Railway Economy.--The Locomotive.

Our last article was devoted to a general description of the various improvements which have been introduced since the year 1837 in the boiler, furnace, and apparatus connected with them, with the view of promoting economy in the consumption of fuel by increasing the evaporative power of the boiler, preventing as much as possible waste of heat, and by adapting the furnace to burn coal in place of coke. We there demonstrated that the great advance made had been brought about by shaping the mechanical appliances employed in accordance with theoretical deductions, so that the process of combustion would be conducted as nearly as possible in accordance with the laws Nature has laid down as essential to perfection. The carrying out this principle should be the end and aim of every engineer who seeks to obtain the utmost duty or value out of the means or materials placed at his disposal. It can only be done by a careful study of those laws, and by founding the structure upon first principles; that this has been done as respects the combustion of the fuel and the utilization of the heat produced therefrom in the locomotive engine in a very satisfactory manner, our explanations of the chemical questions involved, and the means adopted of satisfying the theoretical conditions together with the practical results obtained, prove conclusively. The whole theory of combustion and absorption being thus well understood, and the means of applying that theory ascertained, little more remains to be done but by remedying defects which still exist, and carrying out the principles laid down to the greatest extent possible, to approach still nearer to perfection.

While thus bearing testimony to the efficient manner in which philosophical knowledge has been applied to this function of the locomotive engine, we cannot go to the same extent as regards the other, as the means generally employed for using the steam are very defective, and as we stated in our first article, only gives a result of nearly 75 per cent. below the full theoretical duty. This is mainly owing to the fact that first principles have in this instance been to a great extent lost-sight of, not that with the present type of engine we can ever hope for as near an approach to the full theoretical duty in the use of the steam as is now obtained in its production, but at the same time we may expect a very considerable reduction in the present enormous per cen age of loss if suitable means are judiciously applied to effect it.

In order to bring about this we must first clearly understand the nature and causes of this loss, and ascertain what should be the qualities of a theoretically perfect engine. When we have determined this we shall then be in a position to consider how close to it we may reasonably hope to approach, and what means we should adopt with this object.

The reason why there is so enormous a discrepancy between the theoretical effect and the actual duty got out of a given quantity of water converted into steam, are: Firstly, that the expansive power of the steam is wasted in expanding itself in the boiler without doing any work; secondly, in the cylinder in which its expansive power is only utilized to a very limited extent; thirdly, that a large portion is lost in the clearance of the piston and in the steam passages; and fourthly, there is a loss from the back pressure of the atmosphere against the piston, also from radiation, condeneation, and by escape at the safety valve. If the loss from all these causes could be entirely prevented it is demonstrable that we should have a theoretically perfect engine, which, making an allowance for friction, and assuming the combustion and absorption of heat to be theoretically perfect, would, with the consumption of 1lb. of coal, realize the theoretical duty of 10,000,000lb. raised one foot high. The losses by radiation, condensation, the steam passages, and safety valve, are self-evident, and hardly require a line of argument to be devoted to them. Any one can understand that if a certain quantity of steam is passed into the passage of a cylinder where it does no work, and then discharged into the atmosphere, it developes no power, the same with what escapes from the safety valve; and as heat is power, all the heat that escapes by radiation is so much power lost. These are all necessary evils to a certain extent, and all we can expect to do is to diminish them as much as possible; but the chief loss does not occur from these, but from the way the bulk of the steam is used in producing power, in not properly taking advantage of its expansive property. We arrive at a knowledge of what steam is capable of if this principle is fully carried out in this way. It is known that if steam is let into a cylinder it will drive the piston before it; suppose the steam to be shut off when the piston has traveled a certain distance, the steam will then have exerted a power expressed by its pressure multiplied into the area of the piston and by the distance it has traveled; if, now, the steam is allowed to escape either into the atmosphere or a condenser there is an end of it, and no more power is derived from it; if, however, the steam, although shut off from the boiler, is still retained in the cylinder, it will expand and drive the piston further, and continue to do so until its pressure reduced by expansion is balanced by the pressure of the atmosphere on the other side of the piston, and all this power obtained in driving the piston after the steam was shut off from the boiler is so much pure gain over and above the power which was derived from the steam while it was flowing into the cylinder from the boiler.

This gain amounts to something very considerable, depending on the number of times the steam is expanded. Suppose, for instance, we have steam of 100 lbs. pressure per square inch, which is let into a cylinder, and after driving the piston a distance of 1 ft. it is shut off, we may represent the power thus exerted by 100; if now the steam is allowed to expand and drive the piston another foot, it will have exerted an additional power by the time it arrives at the end of the second foot represented by 69, and it continued through a third foot, at the end of it, an additional power represented by 40, which added to that derived from the second foot amount together to an additional power represented by 109; if continued through a fourth foot we should add 28; through a fifth 22, and so on until the pressure of the steam was so reduced that it was incapable of exerting further power. Now see by this that a very great additional power is obtained from the same quantity of steam by taking advantage of this expansive property, and that by even expanding it only three times its original bulk more than twice the power is obtained from the same amount of steam. We also see that the more the steam is expanded the greater is the power developed, that consequently the greater is the economy obtained. It is therefore evident that to attain perfect economy the steam must be expanded to the utmost limit possible, and by following out this view we shall arrive at some idea of a theoretically perfect engine to serve as a model of perfection which it should be our aim to approach as nearly as possible in practice. We have before explained that we can only give steam the number of expansions that will reduce its pressure to nil, consequently the higher the pressure, the greater the number of times it will expand before it arrives at this point; we shall only therefore have a theoretically perfect engine when we begin with the very highest pressure steam is capable of exerting. This pressure will only be obtained when the steam is confined in a vessel of the same capacity as the volume of the water from which it was produced, that is to say, a cubic foot of water would have to be confined in a boiler of the capacity of one cubic foot, and heat applied until that water was converted into steam. It has been estimated that the pressure of such steam would not be less than 2,000 lbs. per square inch. It would have a temperature of about 1,180 deg. Fahrenheit, and supposing an engine could be constructed to use steam of this heat and pressure, and expand it down to zero, and provided the boiler was so constructed that all the heat of the fuel was utilised, such an engine, being also free from the other losses before enumerated, would be theoretically perfect, and with a consumption of 1 lb. of coal would accomplish the theoretical duty of 10,000,000 foot pounds. It must not be supposed from this that we are now advocating the construction of such an engine upon the system now in use, for this would be impossible, not we believe from the greatness of the pressure, but from the high temperature the boiler, cylinders, &c., must necessarily be kept at; this temperature of 1,180 deg. would be about that of a piece of iron at a bright red heat; we should, in fact, have to deal with red-hot steam, if such a thing can be imagined, and at such a temperature, combined with its great pressure, no material we are acquainted with would be suitable for the working parts, nor could any lubricant be applied. If the natural law had been different, and the temperature of the steam at 2,000 lbs. per square inch had only been some 200 or 300 deg., then indeed we might have hoped for a very near approach to a perfect engine, but until some completely new mode of using the steam, to which a high temperature will not be detrimental, is discovered, we must be satisfied to keep a long way off from absolute perfection. If it were the pressure alone that had to be considered this might be provided for without much difficulty, in fact 2,000 lbs. per inch is but a moderate pressure compared to the pressures that have to be controlled in modern artillery, which is estimated by tons per square inch instead of pounds, and is probably twenty times as great as the greatest pressure steam is capable of exerting. Moreover, if vessels can be constructed to bear such enormous pressure, it would be a comparatively easy task to construct them to bear only a pressure of 2,000 lbs.; in fact, this is a pressure that engineers are quite familiar with in hydraulic presses and other similar apparatus.

While, therefore, we must with our present knowledge and means of utilising steam of this temperature, stand at some distance off and view with awe this monster of our imagination--an engine consuming red hot steam, which would indeed be literally a fire engine, a veritable salamander,—we may nevertheless approach him closer than we have done, for if treated with the consideration due to his exalted position, and dealt with according to the laws of Nature, the all powerful master he obeys, we may tame him to our use, and turn him to our advantage—that is to say, while for the present, and until some new kind of engine is devised capable of using red-hot steam, we must be content to postpone this idea—there is no reason why we should not more nearly approach it by using steam a great deal hotter, and consequently at a much higher pressure than we now do, for the greater the pressure, the greater number of times it can be expanded, and the greater the expansion, the greater the economy.

The direction of our future progress is thus clearly indicated; it should be our aim to employ steam at the highest possible pressure that the means known to us will admit of, and we should expand that steam to the utmost practical limit. If we now look back for five and thirty years, and examine what has been done in this direction during that time, we shall find that it amounts to very little. The pressure of steam in the boiler has certainly been increased, perhaps doubled, but this is all we can say, for its use expansively has hardly been approached, much less handled in the masterly way that the subject of combustion and absorption of heat has; for although some attempts to work the steam expansively in the locomotive have been made, they were mostly of a futile character, and founded on a false basis; they have been confined chiefly to improving the mechanical apparatus for working the slide valves so as to admit of the steam being cut off at various parts of the stroke by the ordinary D valve, or at best some arrangement of separate cut-off or expansion valve has been added, which has also been arranged to vary the rate of ex-

pansion, so that in fact the slide valve, under the erroneous notion that it was economising the steam by expanding it, has only been performing the office of the regulator in a somewhat differe t manner, and with little if any more advantage.

We do not hesitate to say that the whole system of variable expansion is one of the greatest fallacies that has ever prevailed among any body of scientific men. The sooner it is exploded, and the matter viewed in its true light, the better.

No doubt the introduction of the variable expansion system arose in the first instance from the fact that the work of the locomotive is constantly varying, according to the weight of the train, the inclination of the gradients, and whether it is ascending or descending,— and no doubt the difference between the two extremes under even ordinary circumstances must be very great,— but then that is no argument in favour of varying the rate of expansion to correspond, for expansion should be applied to promote economy, not to regulate the admission of steam to the load, and increasing the expansion as the load diminishes is the reverse of economical. Suppose, for the sake of argument, that the difference between the greatest and least load is as 5 to 1, and that during its journey the engine is one half the time doing the work represented by 1 and the other half represented by 5, and as the work done indicates the quantity of coal burnt, supposing there was no expansion in either case, the respective consumption of coal would be in the like proportion of 1lb. to 5lbs. Now if the steam were worked expansively, according to the present variable system, when the engine was doing its maximum work and consuming 5lbs. of coal the steam would be worked at full pressure throughout the stroke, and no saving would be effected. but when it was consuming 1 lb. the expansive gear would be brought into action, and then a saving would be effected say of 50 per cent.; which would reduce the consumption to ½ lb.; so that the total consumption during the journey would be 5lbs. for one-half, and ½lb. for the other, or 5½lbs. instead of 6lbs., amounting to a saving in the whole journey of 1-12th of the total fuel consumed.

Let us now suppose that by a suitable arrangement the steam is used expansively while the engine is doing its maximum as well as its minimum duty, and that the same saving of 50 per cent. is effected; this on the 5lbs. would amount to 2½ lb. and on the 1 lb. to ½lb. as before, on 3lbs. on the whole consumption of 6lbs., being 50 per cent. for the whole journey, or one half in the place of the 1-12th saved by the variable system.

We have submitted this comparison to the test of figures in order to illustrate more forcibly the fallacy of the variable expansive system, although its absurdity might be exposed by reasoning generally on the subject. It is only another example of the penny wise and pound foolish system, and amounts to much the same as a man economising his expenditure by saving sixpence out of every shilling while he throws away ten shillings out of every pound; in fact, it must be self-evident to any one that the same percentage of saving on a large sum must in the aggregate be proportionately greater than on a small one, and therefore if true economy in the use of the steam is to be introduced in the locomotive, the general arrangement of the engine must be so modified as to admit of the steam being used expansively, and that to a much greater degree than hitherto attempted during all times of the working of the engine, but especially when the engine is working up to its maximum power and consuming the greatest quantity of fuel. The sooner therefore this principle is admitted by locomotive engineers, and they set themselves to work to solve the problem, the sooner may we hope to see another important reduction in the consumption of fuel, and a corresponding increase in railway dividends.

We have shown that the higher the pressure of the steam we can employ the greater may be the expansion, and the greater consequently will be the economy. It is of no use therefore to creep up to this by degrees; we may as well at once determine what is the very highest pressure that can be used, or rather what is the highest temperature that can be dealt with in engines as at present constructed, and adopt the pressure corresponding to that temperature as the one we should aim at constructing the boiler and engine to utilize. As to the strength of the boiler and engine we ought not to be under any apprehension. It is as easy to construct these to bear one pressure as another, provided proper means are adopted, but we cannot with safety heat the metals employed above a certain temperature, and moreover it is requisite that the working parts be lubricated, and probably this will determine the limit, as the heat must be kept below the evaporating temperature of the lubricant.

The temperature of steam at 500 lb. per square inch would be about 460 deg. Fahrenheit; this is well below the temperature at which any kind of oil or grease would evaporate or become decomposed, neither would it injuriously affect the strength of cast or wrought iron or gun metal, and steam of this pressure could be expanded 30 times, and the power derived from the same quantity of steam used in this way would be more than 3½ times as great as if used expansively, or on the present variable expansive system.

The use of steam of 500lbs. pressure is after all no novelty. Mr. Perkins, many years ago, constructed a boiler which generated steam of this pressure with perfect security, and he applied it to drive a small engine as well as in his steam gun, but the chief advantage to be derived from steam of this pressure by admitting of a larger degree of expansion he hardly appears to have appreciated, yet in this after all lies its chief advantage, and probably on this account his ideas, which were to a certain extent correct, did not become sufficiently developed to be turned to a useful account.

We are sure, however, this is the road that future improvement in the locomotive as well as in other engines must take, and we submit this as a simple problem to our locomotive engineers to work out. We give them the hint as to what is required to be done, but we must leave to their ingenuity and practical skill to provide the means of doing it, and if the same amount of ability is evinced in working out this question, as in the other, we hope to see as great a saving on the present consumption of fuel effected in the next three years as has been during the last thirty.

Sale of the Western Union Railroad.

The Western Union Railroad, from Racine to Port Byron on the Mississippi River, a distance of 180 miles, has passed into the hands of Alexander Mitchell, of Milwaukee, and his associates, by purchase. Of course the management will go with the ownership.

It has always been a mystery that this road, running as it does through a region of unsurpassed productiveness, has fallen so far behind our Prairie du Chien Railway or the Chicago and Rock Island. We believe it has been the least productive of any road connecting the lake with the river. Under the management of such men as have managed Milwaukee roads, or Chicago roads, the Western Union ought to have made Racine a city of twenty-five thousand people. Instead of this she has been content to be used as a tail to the Chicago kite.

When the new owners assume the management of the road, we can assure our neighbors that there will be a change in policy that will enable the Western Union to rank with the other great thoroughfares from Lake Michigan to the Mississippi River.

The towns along the line of the Western Union, as well as Racine, will find cause for self-congratulation in the change about to be made. With the ample means which Mr. Mitchell can command, he will be able to add to the stock, equipment, and station accommodations to meet all the demands of the public. Mr. Mitchell is a director in the Northwestern Railroad, which crosses the Racine road at two points, and will be able to make the most satisfactory connections.

In every point of view it seems to us that the change will be a good one; good not only for Racine but for Milwaukee.—*Mil. Wis.*

The South Street (Philadelphia) Bridge.

The Philadelphia *Ledger* says that the plans of Chief Engineer Kneass for an iron bridge over the Schuylkill at South street, Philadelphia, have been adopted. It is proposed to construct a Murphy's truss bridge, with two draws in the centre 77 feet wide each. On each side of the draws are to be two spans of 185 feet each. The centre and river piles will be of iron, sunk by pneumatic process; and on this principle will the draws be worked. The length of the bridge will be 2,188 feet, and the clear height 32 feet above high water. Proposals for its construction have been invited, but none as yet have been received.

☞ The State Treasurer of South Carolina gives notice that the interest on the bonds of the State of South Carolina, since July 1, 1867—up to which date the accrued interest was funded—will be paid on and after July 1, at the banking house of H. H. Kimpton, in New York, and at the State Treasury office in Columbia. The interest on the registered stock of the State, accrued since July 1, 1867, will be paid at the same time, but in Columbia only.

☞ The first regular passenger train on the first division of the Dutchess and Columbia Railroad, from Hopewell Junction to Fishkill Landing, was run on the 21st inst. The road is leased for ninety-nine years to the Boston, Hartford and Erie Railroad Company, by whom it will be operated.

☞ We give in our advertising columns the names of 14 Contractors to whom 51 Sections of the Pittsburg and Connellsville Railroad have recently been let. The remaining 35 Sections having been previously contracted for, the whole line of 86 miles between Connellsville and Cumberland is now under contract, and there will be constant employment for labor thereon during this year and the next.

☞ The Treasurer of Indiana proposes to pay off $800,000 of the State debt on the 1st of July, if the holders of the State bonds will relinquish them to that extent. If this sum can be paid it will leave the State debt at about $1,800,000, whereas it was fully $7,000,000 but five years ago.

☞ A dispatch dated Memphis, Tenn., June 23d, says: A. L. Mitchell, President of the Mississippi River Railroad, advertises for grading the same from Memphis to Covington, Ky. Indications are that the work will be pushed forward at an early day.

☞ The new railroad to connect Newark with New York has been completed as far as Railroad avenue, Newark, so that there can be now no doubt the road will be in working order before the 1st of July.

☞ The St. Louis and Iron Mountain Railroad was opened to Fredericktown, 105 miles from St. Louis, on the 22d inst.

☞ The preliminary survey of the Des Moines and McGregor Railroad has been commenced,

Journal of Railroad Law.

RAILROAD COMPANY—WHEN NEGLIGENCE OF A THIRD PARTY WILL NOT EXCUSE A CORPORATION FOR INJURY TO A PERSON NOT HIMSELF GUILTY OF NEGLIGENCE.

The facts of the recent case of Webster *vs.* The Hudson River Railroad Company (38 N. Y. 260), are fully and clearly stated in the following opinion by

HUNT, CH. J.—The plaintiff was properly in the cars of the Hudson and Boston Railroad Company, on his way to Chatham. It is not pretended that he was guilty of any personal negligence, or that it was in his power, by any means, or in any degree, to have prevented the collision by which he was injured. Like every passenger in a train of cars propelled by steam, he was passive in the hands of the railroad company; unable to aid, if aid was useful, unable to delay or to hasten a train, incompetent, and not permitted, to regulate or examine its machinery. His personal safety was exclusively under the control of others. Of the company, to whose care he had intrusted himself, he was entitled to ask the very highest degree of care and attention. Of all others, that ordinary care which all prudent people are bound to bestow in the management of their affairs. The jury have found, that the defendants were deficient in the use of such care, and I see no reason why they should not respond in damages. The "imputation" to the plaintiff of the negligence of another is based upon no sound principle. The fact that the Boston road was also guilty of negligence, furnishes, in law or morals, no excuse for the negligence of the Hudson River Company, and no reason why they should not respond in damages. (Sheridan *vs.* Brooklyn and H. R. R. Co., N. Y. 39.)

In Chapman *vs.* The New Haven R. R. Co., (19 N. Y. 341), and in Colegrove *vs.* The Harlem and N. H. R. R. Co., (20 id. 592,) the question now before us was distinctly presented, and in each case was decided in favor of the plaintiff. In the case of Brown *vs.* N. Y. C. R. R. Co. (23 N. Y. 597), the question was somewhat discussed, but it did not exist in the case. There, the justice at the circuit had charged, that the plaintiff was responsible for the negligence of the driver of the stage in which she was riding, and the jury had found that there was no negligence on the part of the driver. The question of imputed negligence could not, therefore, have been decided in that case. The case of Thoroughgood *vs.* Bryan (8 Com. B. 115) was cited in several of the above cases. The facts in that case show a clear question of personal negligence to be submitted to the jury. Instead of waiting for the driver of the omnibus in which he was riding to draw up to the sidewalk, and there permit him to alight, as he had a right to require, the plaintiff got out in the crowded street, and was at once, or soon, struck by an approaching omnibus. If there was negligence, the plaintiff was the negligent party, although the driver of his omnibus may have been negligent also in not stopping at once, or in not driving to the sidewalk. This case is no authority for the decision of a case like the present.

Upon principle and authority, this case was rightly decided below, and the judgment should be affirmed.

Judgment affirmed.

Illinois Central Railroad.

The statement of this Company for the month ending May 31, 1869, is as follows:

LAND DEPARTMENT.

Acres Construction Lands Sold	6,408.76 for	$61,393 01
Acres Int. Fund Lands sold	40.00 for	501 60
Acres Free Lands sold	840.00 for	13,573 80
Total sales during month of May, 1869	7,288.76 for	$75,468 41
To which add Town Lot Sales		1,892 00
Total of all	7,288.76 for	$77,360 41
Cash collected in May		$166,142 22

TRAFFIC DEPARTMENT.

Receipts from Freight		$325,848 00
do. Passengers		124,132 10
do. Mails		6,358 33
do. Rent of Road		4,000 00
do. Other Sources		90,000 00
Total Receipts in May, 1869		$550,338 43
Total Receipts in May, 1868		$486,041 22
Estimated earnings in the month of May, on the D. & S. C. R. R., not included above		$104,708 55
Corresponding month of 1868		$82,891 43

Kansas Pacific Railroad.

At the close of 1868 this company had 440¼ miles of road in operation, of which 405 miles, (extending from the Missouri State Line to Sheridan, Kansas,) were Main Line, and 35¼ miles branches. Of this, 70 miles were opened during the year, viz: from old Coyote Station to Monument, 50 miles, on the 14th of June, and from Monument to Sheridan, 20 miles, on the 16th of August—making the average length of road operated during the year 403.36 miles, against an average of 228.45 miles in 1867. The branches are: Leavenworth branch, 31.8 miles; Wyandotte spur, 1.75 miles; State Line to Kansas City, 1.70 miles. The following is a comparative statement of the earnings and expenses during the year ending December 31,

Earnings:	1867.	1868.
Commercial business	$1,071,883 44	$1,263,165 53
Government business	511,369 04	487,920 18
Conductor's freight	250,968 14	145,384 73
Miscellaneous	49,633 14	13,691 39
Total	$1,883,853 76	$1,910,161 83

The expenses of 1868 were as follows:

Conducting transporta'n	$276,759 80	
Motive power	416,207 20	
Maintenance of cars	63,012 56	
Maintenance of way	221,029 44	
General expenses	59,485 23	
		1,036,494 20
Net earnings		$873,667 63

In 1867 the operating expenses were $1,277,618 69, and the net earnings $606,235 07. The per centage of expenses to earnings in 1868, was 54.26; in 1867, 66.04. The earnings per mile in 1868 were $4,735 63; the expenses per mile, $2,569 65—and the net earnings per mile, $2,165 98.

The company have over 6,000,000 acres of unsold land between Kansas City and Denver, lying in alternate sections within 20 miles of the road on each side. About one-half of this lies along the road thus far completed, and there is no incumbrance on any land of the company, except on about 1,000,000 acres between the 140th and 240th mile posts, on which there are Land Grant Bonds outstanding to the amount of $361,000. The proceeds of sales during 1868 have equaled more than one-half the amount of these outstanding bonds, and by the close of 1869 will undoubtedly be sufficient to extinguish the lien. The entire landed estate of the company will then be practically clear of encumbrance. The number of acres of land sold during the year amounted to $111,271; cash received therefor, $77,678 26, notes, $201,084 06—total, $278,762 32. The expenses attending the sales were $24,477 95, and the net proceeds, $254,284 37.

The equipment of the road consists of 29 locomotives, 21 passenger, 10 baggage, mail and express, 242 box freight, 108 stock and 422 platform cars. Miles run by passenger trains, 232,121; by freight trains, 439 932; by other trains, 94,148—total miles run, 766,201. Number of passengers carried, 109,332 (of whom 10,094 were emigrants); 59,713 were carried west, and 49,619 east. Passengers carried one mile, 6,752,750. Tons of freight moved, 124,377; do., moved one mile, 20,251,545.

GENERAL ACCOUNT, March, 31, 1869.

Cost of construction and equipment, 438 miles, including surveys to the Pacific, right of way, and real estate purchased		$22,692,217 34
Interest on funded debt, and amount paid for discount and interest, since December 31, 1868		90,234 41
Due from government for transportation		177,160 91
Bills receivable (chiefly Land Notes)		274,843 76
Due from other companies		14,335 01
Due from individuals, including amounts advanced on audited accounts		25,084 73
Agents' balances		68,480 96
Value of supplies on hand		227,908 30
Sundry investments		60 457 34
Cash and securities on hand		55,774 65
Profit and loss		7 320 67
		$23,693,818 08
Capital stock		$5,072,500 00
Income bonds	$4,275,350	
First mortgage bonds	6,240,000	
Leavenworth Br. bonds	600,000	
Land Grant bonds	361,000	
		11,476,350 00
Government subsidy	$6,303,900 00	
Less amount credited by U. S. Treasurer for transportation	413,458 02	
		5,889,541 88
Bills and accounts payable, unclaimed coupons, wages, &c		711.569 16
Miscellaneous liabilities		40,979 47
Net earnings for January and February, 1869		41,925 69
Net receipts from sales of lands January and February, 1869		108,423 77
Receipts from agents and conductors, for account of month of March, 1869		75,081 78
Balance of income, Dec. 31, 1868		277,446 23
		$23,693,818 08

☞ Messrs. Willis, Phelps & Company, of Springfield, Mass., have contracted to build the Monadnock Railroad from Winchendon to Peterborough, N. H.

☞ The Chicago, Cincinnati and Louisville Railroad, entending from La Porte to Peru, Indiana, is completed, and through passenger trains will commence running on the 27th inst.

The Car Builders' Convention.

The Master Car Builder's Association held its fourth annual convention at the Tremont House, Chicago, on Wednesday and Thursday of last week. Twenty-six old members of the Association—mostly from Eastern roads—were present the first day, and fifteen new members joined it. I. W. Van Houten, of the Pennsylvania Railroad, was re-elected President for the ensuing year, and Hugh Grey, of the Chicago and Northwestern, was chosen Vice President; J. W. Davis, of the Pennsylvania, Secretary; and A. Steinbach, of the Philadelphia and Reading, Secretary. Invitations to accept excursions over various railroads were received, and some time was spent in examining various improvements exhibited by the inventors or their agents.

In the discussion on car building the following were the decisions by votes after debate:

That the draw bars of freight cars be fixed at two feet eight inches, and those of passenger cars at three feet.

That the bodies of box cars consist of two sills and four stringers; the sills to be four and a half by eight inches, and the stringers three by seven and a half, dressed, all of Southern yellow pine. Several members believed it impossible to determine upon a uniform size.

That six-wheel trucks for the largest size of passenger coaches and sleeping cars are the safest, and, all things considered the best for railroads to use.

That for heavy passenger cars the size of the axle should be four and a half inches in diameter on the wheel seat, and three and seven-eighths in the centre, with journals three and a quarter inches in diameter and six and a half long.

A committee which examined drawings, models and specifications for the construction of freight and passenger cars and trucks reported that the best four-wheel passenger truck was that presented by Mr. Van Houten, of Philadelphia; the best iron freight car, the design of Mr. Waddington, of Fort Wayne; and the best six-wheel passenger truck, also Mr. Waddington's design.

A committee, of which E. R. Brown, of the Lehigh Valley, and Leander Garey, of the New York and Harlem, are members, was appointed to prepare business for the next meeting of the Association. Mr. Brown's address is Mauch Chunk, Pa., and Mr. Garey's, New York City.

The next meeting of the Association will be held in New York on the second Wednesday of June, 1870.

Agents' General Depot for Maps and Charts,
16 Beekman-st., N. Y.

TO RAILROAD CONTRACTORS.

Memphis, El Paso and Pacific RAILROAD COMPANY.

Office of the Chief Engineer,
Memphis, El Paso and Pacific Railroad Company,
66 Exchange Place,
NEW YORK, June 8th, 1869.

SEALED PROPOSALS will be received at the above Office, until **September 1st, 1869**, when Contracts will be awarded, for the GRUBBING and CLEARING, GRADING, MASONRY, BRIDGING, BALLASTING, CROSS TIES and TRACKLAYING of the following portions of said Railroad:

FIRST—The last Fifteen miles on the First Division of One Hundred and Fifty Miles, between Jefferson and Paris, Texas, commencing Eight miles east and extending Seven miles west of the town of Clarksville, in Red River County.

SECOND—One Hundred and Fifty miles, embracing the Second Division, commencing at Paris and extending westward, to Palo Pinto County.

Specifications, Profiles, Maps and Plans can be examined after the FIFTEENTH OF AUGUST, 1869, at the ENGINEER'S OFFICE, in NEW YORK or JEFFERSON.

Proposals must conform to the specification which will be furnished upon application at either of the above places after August 1st, 1869.

Evidence of ability to complete contracts will be required and a percentage retained of estimates until each section of five miles is finished.

Work upon the First Division must be completed by March 1st, 1870.

The Second Division must be finished by October 1st, 1870.

Every facility will be furnished those wishing to inspect the ground on the line of the road, by application in person at the Engineer's Office in Jefferson.

J. M. DANIEL, Engineer in Chief,
Memphis, El Paso and Pacific R. R. Comp'y.

ROME, WATERTOWN AND OGDENSBURG RAILROAD.—VICE PRESIDENT'S OFFICE, No. 12 College Place, New York, June 12th, 1869—This Company will pay a semi-annual dividend of FIVE (5) per cent., free, on and after the 15th July, to stockholders of record at this date. Transfer books will remain closed from date till the 1st July. Stock registered in New York will be paid at the Mercantile Bank for 60 days. All other at Watertown.

3125 J. A. LAWYER, Treasurer.

FOR SALE OR HIRE.

4 SECOND HAND PASSENGER CARS, 4 feet 8½ inch gauge. Two seat 60; two 48 persons.

JACKSON & SHARP,
Delaware Car Works,

ROLLING STOCK & SUPPLIES.

Old Rails Re-Rolled & Exchanged for New.

☞ Special attention paid to the Purchase and Sale of Old Railroad and Scrap Iron

CONSIGNMENTS SOLICITED.

Pittsburg and Connellsville Railroad.

ENGINEER'S OFFICE PITTSBURG & CONNELLSVILLE R.R. Co., Pittsburg, June 3d, 1869.

THE GRADUATION, MASONRY and BALLAST, upon the following Sections of the PITTSBURG AND CONNELLSVILLE RAILROAD, have been allotted, by the President and Directors of the Company, to the parties named below in connection with the same—viz:

To RALPH JONES & CO.—Sections, 67, 68, 69, 70, 71, 72, 75, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105.
To JOHN DONAGHUE & BROTHERS—Sections 107, 143, 144.
To MEYER, BRODHEAD & CO.—Sections, 115, 119, 120, 121, 122, 123, 124, 125, 126, 127.
To DEWEES & CLARK—Sections 118, 119.
To PATRICK KEATING—Section 118.
To JOHN WILHELM—Section 109.
To EDWARD KERNS & BROTHER—Sections 131, 132, 137.
To BRACKEN & FITZPATRICK—Section 133.
To B. B. GONDER—Sections 134, 135.
To ALEXANDER B. BUCHANAN—Section 136.
To P. R. HOWLEY—Section 138.
To GEORGE W. HARRISON—Section 139.
To NATHAN SHIPLEY—Sections 141, 142.
To MANFULL & ROSS—Sections 77, 78, 79.

The remaining 35 Sections between Connellsville and Cumberland having been contracted for previously, the whole line of 86 miles between those points is now under contract to responsible parties, and there will be ample and steady employment for labor thereon during this year and the next.

BENJ. H. LATROBE, Chief Engineer.

Proposals for $2,767,000 Tax Relief Bonds of the City of New York.

SEALED PROPOSALS will be received at the Comptroller's office, until TUESDAY, June 29, 1869, at 2 o'clock P. M., when the same will be publicly opened, for the whole or any part of the sum of $2,767,000, of "Tax Relief Bonds of the City of New York," authorized by Sec. 2 of Chap. 876, Laws of 1869.

Said bonds are to be issued for the purpose of providing means to redeem the Family Aid Fund Bonds of the City of New York, due Nov. 1; that portion of the county debt, due Nov. 1, and the quota of the State tax to be levied on account of State debt chargeable to the County of New York during the present year.

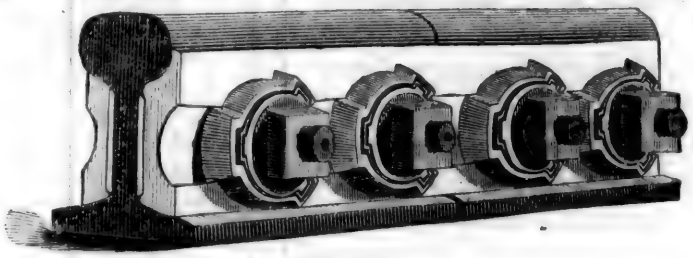
The bonds will bear interest at the rate of seven per cent. per annum, payable semi-annually, on the 1st day of May and November in each year, and the principal will be redeemed on the 1st day of July, in the year 1879.

The proposals will state the amount of bonds desired, and the price per $100 thereof; and the persons whose proposals are accepted, will thereupon be required to deposit with the Chamberlain the sums awarded to them respectively, together with any premium thereon.

The "Family Aid Fund Bonds, No. 5," of the City of New York, due Nov. 1, 1869; the Bonds of the County of New York, entitled "New York County Bonds for the repayment of Taxes," due Nov. 1, 1869; and the "Revenue Bonds of the City and County of New York, of 1869," will be accepted at their par value and accrued interest, in payment, on account of any proposals made for the aforesaid Tax Relief Bonds of the City of New York, which may be accepted; and in such cases the adjustment will be made at this office and the new bonds issued.

On presenting to the Comptroller the receipts of the Chamberlain for deposits made with him on account of the aforesaid loan, the parties will be entitled to receive bonds for equal amounts of the par value of the sums awarded to them, bearing interest from the dates of payment.

This loan, without increasing the debt of the City, offers an investment to companies and individuals unrivaled in security and for a period of years.



Each proposal should be sealed and indorsed, "Proposals for Tax Relief Bonds of the City of New York," and inclosed in a second envelope addressed to the Comptroller.

The right is reserved, on the part of the Comptroller, to reject any or all of the bids if, in his judgment, the interests of the Corporation require it.

RICHARD B. CONNOLLY, Comptroller.

City of New York, Department of Finance, Comptroller's Office June 19, 1869.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

From the Pittsburg Chronicle June 25.

Pittsburg, Fort Wayne and Chicago Railway Lease.

Yesterday we gave a brief record of the proceedings of the adjourned meeting of the annual meeting of the stock and bondholders of the Pittsburg, Fort Wayne and Chicago Railway. The stock vote, which was in progress at the time we went to press, was called on the following resolutions:

Resolved, That we, the stock and bondholders of the Pittsburg, Fort Wayne and Chicago Railway Company, hereby assent to and approve of the lease of the railways of said company to the Pennsylvania Railroad Company for the period of nine hundred and ninety-nine years, upon the terms and conditions, and for the annual rental reserved and mentioned in a certain Indenture of Lease thereof, bearing date on the 7th day of June, 1869, executed by or on behalf of the said Pennsylvania Railroad Company and now submitted to us; and that we hereby assent to and approve of the execution and delivery of such lease on behalf of the said Pittsburg, Fort Wayne and Chicago Railway Company: *Provided, however*, That this assent and approval shall not be construed to waive, alter or impair the existing liens of the respective deeds of trust or mortgage by which the payment of the respective bonds are secured; but that this assent and approval is expressly declared and is given upon the condition that the said lease shall be and shall ever be deemed and taken to be subordinate to the aforesaid liens.

Resolved, That the assent of the stockholders is hereby given to the making, by the Board of Directors of this company, of such contract, as is contemplated in article thirteenth of the lease this day submitted, upon the terms and conditions, and upon the approval and assumption by the lease, as in the said article contemplated.

Resolved, That inasmuch as in and by the provisions of the lease of the railway of this company to the Pennsylvania Railroad Company, after satisfying the liabilities of the company for interest and sinking funds, a perpetual dividend fund is provided adequate to pay twelve per cent. upon the existing stock of this company, free and clear of all taxes which may operate as a deduction from the said dividends, it is expedient that a guaranteed stock entitled to dividends at the rate of seven per cent. per annum, payable quarterly in such form and with such guarantee as the Board of Directors may prescribe, and of such aggregate amount as the annual rental $1,300,000 shall suffice to pay dividends upon, at the aforesaid rate of seven per cent. per annum, shall be created, and that the same shall be issued in substitution of the now existing stock, in such manner and on such terms as the Board of Directors and such committee or officers as they may designate are hereby vested with all powers which the stockholders can confer, and which may be necessary or proper to carry the substitution into complete effect.

A motion was made and carried to vote by ballot on the three propositions severally.

The voting was not concluded until a late hour in the afternoon, when the meeting adjourned to assemble this morning at 10 o'clock to receive the report of the tellers.

It is supposed that about $15,000,000 of share and bond capital voted at the meeting yesterday of which over $14,000,000 voted in favor of the lease, and less than $1,000 000 against it, the larger portion of the latter sum being voted, it is said, by the President.

This morning, at 10 o'clock, according to adjournment, the tellers assembled and made their report.

The vote stood as follows:

On the first resolution, 179,701 for, and 7,217 against.

Second resolution, 186,918 for, and none against.

Third resolution, 162,636 for, and none against.

In the meeting of the first and second bondholders, the vote stood about in the same proportion.

At the meeting of the Directors of the road, the usual quarterly dividend of two and a half per cent. was declared, anticipatory of the 16th of July.

We presume that, under the terms of the lease, the active operations of the road will fall into the hands of the lessees, the Pennsylvania Railroad Company, on the 1st of July, General Cass still retaining his position as President of the Pittsburg, Fort Wayne and Chicago Railway, in which capacity he has so long been identified with the interests of that corporation and the business history of Pittsburg.

In this connection, we may state that the Grand Rapids and Indiana Railroad is being pushed forward with great energy on the part of Mr. Cass, the President, northward from Fort Wayne to the Upper Lake country. His energy, as President, joined with that of Mr. J. L. Williams, of Fort Wayne, as Receiver, has built within the last three months twenty miles toward Grand Rapids, and placed twenty miles more under graduation, to be completed within the next three months. This whole route toward Grand Rapids will be completed this year, and will form another great link of transportation and traffic with the Pittsburg, Fort Wayne and Chicago Railway at Fort Wayne.

Grand Rapids and Indiana Railroad.

The Kalamazoo *Telegraph* says that the Pennsylvania Railroad Company has agreed to indorse the bonds of the Grand Rapids and Indiana Railroad Company, and is confident that the speedy completion of the railroad is assured by this endorsement. It would be valuable to the Pennsylvania as a feeder to its lines east of Fort Wayne. The last Michigan Legislature gave the company a land grant, on condition that it should complete 20 miles of the road north of Cedar Springs, which itself is 20 miles eorth of Grand Rapids, by the 1st of July this year. On the 22d ult. this section was completed and a train ran over it. Work on the next section is to be commenced immediately.

☞ Gen. E. M. Law has been appointed Superintendent of the Charlotte and Augusta Railroad.

Canadian Railway Returns.

The earnings of the Railways of Canada for the month of May, 1868 and 1869, were as follows:

	1869.	1868.
Great Western	$294,658	$280,992
Grand Trunk	736,917	646,824
London and Port Stanley	3,371	3,642
Welland	9 201	10,793
Northern	81 906	74,671
Brockville and Ottawa	19,344	16,556
St. Lawrence and Ottawa	14,688	10,263

New Brunswick and Canada.	12,324	11,273
European & North American	17,190	14,746

Toledo, Wabash and Western Railway.

The gross income of this company for the fiscal years ending December 31, 1867 and 1868, was as follows:

	1867.	1868.
From passengers	$1,213 525 43	$1,224,681 51
" freight	2,364,225 40	2,542,742 91
" mail	52,000 00	70,412 49
" express	148,385 52	89,163 97
" miscellaneous	31,217 23	86,207 10
	$3,809,353 58	$4,013,207 98
Expenses, viz:		
Renewal of iron and superstructure	$264,912 93	$287,064 04
Maintenance of roadway and structures	633,491 20	624,579 41
Maintenance of cars, engines, etc.	449,469 34	489,389 66
General transportat'n expenses	1,439,008 85	1,488,586 68
	$2,786,882 32	$2,889,619 79
Leaving a net income of	$1,022,471 26	$1,123,588 19

Compared with the previous year, the gross earnings of 1868 show an increase of $203,854 40; with an increase in expenses of $102,737 47—making the increase of net earnings, $101,116 93.

The receipts and expenditures during the year were as follows:

Receipts.	
Gross income, as above	$4,013,207 98
From consolidated mortgage bonds.	615,000 00
Bills payable	1,308 00
Materials and supplies, less than 1867	24,546 80
Fuel, less than 1867	6,848 42
Cash, (balance of 1867)	151,171 98
Wabash elevator stock, (sold)	10,000 00
From Connecting roads (balance of 1867)	35,000 11
Total	$4,857,083 29
Expenditures, &c.	
Operating expenses, as above	$2,889,619 79
Equipment	19,300 83
Construction	284,180 88
Interest less unpaid coupons	1,181,330 03
Jacksonville Depot Company	1,765 48
Quincy Railway Bridge Co	1,800 00

Hannibal and Naples R. R. Co	3,669 00
Bills payable of 1867, paid	15,420 00
Coupons of past year paid	16 030 00
Cash on deposit	108,077 43
269 sinking fund bonds paid off	269,000 00
Due from connecting roads, individuals, &c	22,759 22
Due from U. S. Post Office &c	28,945 73
Total, as above	$4,857,083 29

The earnings of the road, for the current year, show a very gratifying increase of $203.854 40 over the earnings of the preceding year, and are largely in excess of any corresponding period in the history of the company. However, owing to causes that were extraneous and beyond our own control, the results of the year have hardly been commensurate with the vast amount of actual service performed. The prevalence of a most vicious competition at all principal cities at the East during a large portion of the year, for the through traffic, and carried to an extent as to involve a positive loss upon the business done, has seriously depressed the aggregate earnings of our own line, as I dare say it has that of all others. It is to be much regretted that harmony and community of interest between the various lines, furnishing outlets to common points or markets, cannot be more permanently established in these matters, so that these frequent and disastrous conflicts for business might be avoided.

Another source of depression to our earnings is found in the failure of Eastern lines to receive and forward with promptness and despatch, our eastward-bound freight, the neglect of which has caused damaging blockades at Toledo, and consequent stagnation and paralysis of business all along the line of our road. The losses and injury entailed upon Western lines from this cause, are of a very serious character indeed, but no doubt will have to be borne until the managers of Eastern roads shall come to understand and appreciate, the ever-increasing demand for transportation facilities, created by the vast and constantly increasing agricultural productions of the West, and when so apprehended, shall promptly and adequately meet these demands.

Our prospects for a large and prosperous traffic for the incoming year, are singularly bright and encouraging. It is believed there was never before so large an area of our country in wheat at this season, as now, and all agree that the wheat sowed last Autumn, is looking remarkably thrifty and promising. Unless some disastrous blight shall yet be experienced, we shall harvest more wheat in 1869 than in any former year. The larger portion of the corn crop of last season, confessedly an abundant one, still remains in the hands of the producers, and fully one-half of the wheat crop is likewise held in reserve, and to come forward. We have also the usual accumulations of beef, pork and other miscellaneous freight upon the line, sufficient to swell the business of our road beyond that of any previous year.

The local traffic of our road, in all its various branches, indicates a constant and gratifying increase with each returning season, and its continued increase will be fully assured, as the rich and fertile country contiguous to it, becomes more populous and its resources more fully developed. It is in view of this, that we are inspired with confidence as to the future success of our line, since it may be assumed as an axiom of universal experience, that the profitableness of a railway actually depends upon the volume and character of its strictly local traffic.

During the present year a contract was entered into between this company and the Hannibal and Naples R. R. Co., the Hannibal and Central Missouri R. R. Co., and the North Missouri R. R. Co., whereby it was agreed in consideration of the covenants of these companies, that on the completion of the lines connecting Naples with Moberly, on the North Missouri Railroad, and the several companies uniting in forming a continuous through line to Kansas City, mutually co-operative and on a *pro-rata* basis, that this company would procure a certain amount of pecuniary aid for building the line, and assist in the construction of a bridge to Hannibal, and also on the completion of the road as far West as Hannibal, would furnish equipment and operate the same under a lease or division of the gross earnings.

The Hannibal and Naples Division of the line is now rapidly approaching completion; more than one-third of the iron has already been laid, and it is confidently expected that during the month of July next, the road will be ready for the running of trains over its whole length, from Naples to Hannibal.

The line from Hannibal to Moberly is also under contract, and though work has been delayed by the unfavorable weather of the winter, so large a force has now been distributed over the whole distance, as to make it certain that the grading can be completed within the year. The iron, equipment, &c., for this portion of the road is now being secured and will be delivered as soon as required. The completion of this work insures to our road, a line to Kansas City and Leavenworth, forty-three miles shorter than *via* Quincy, forty-five miles than *via* Saint Louis, and the shortest and most eligible route from New York, Boston, Philadelphia and Eastern cities, to Northern Missouri, Kansas, and the principal towns upon the Upper Missouri River. The importance of this connection to our road cannot be over-estimated.

Another equally important arrangement for our company has recently been concluded, having for its object the building of a direct line of railway, connecting with our road at the city of Decatur, and running thence to the city of Saint Louis. The means required for this undertaking have already been provided, and upon the consummation of some preliminary contracts with several counties and towns immediately interested, the work will be commenced and prosecuted to completion with the utmost degree of energy. As soon as the completion of this road is accomplished, it is to be operated by our company, and in fact is to be incorporated into our own line, in virtue of an agreement of consolidation already executed. The line of this proposed road passes through one of the richest and most productive portions of Illinois, and with Saint Louis as its terminal and objective point, we have every reason to expect from it, an accession to all branches of our traffic, far beyond and surpassing anything hitherto experienced upon our road.

We have also additional grounds for confidence in the future business of our road, by the building of a railway bridge across the Mississippi River at Keokuk, and which is now, already in process of construction. By the construction of this bridge, we are brought into immediate connection with the Des Moines Valley Railroad, and thence to the extensive grain and stock growing regions of Central and Southern Iowa, a source from which we are now deriving a valuable traffic, and which will be very materially increased when the expense, detentions and other inconveniences incident to transfers by ferry, are surmounted.

The advantages attainable to our road by the construction of the Attica and Rockville Railway, were referred to in a former annual report, and the subject continues to be invested with much importance. The company in charge of this enterprise are still making exertions to secure means sufficient to build the line, and with the progress thus far made, they feel encouraged of ultimate success.

The year has been marked by an unusual exemption of accidents, and trains have been run with signal promptitude and regularity, which affords gratifying evidence of diligent care on the part of those immediately in charge of the road and trains.

Our capital stock, both general and preferred, is unchanged since the late annual report. The funded debt is changed by the payment and cancellation of the outstanding $269,000 of sinking fund bonds.

We close our fiscal year without any floating debt whatever, and with a liberal balance of cash on hand.

The length of road operated is as follows: in Ohio, 75.5 miles; in Indiana, 166.9 miles; Main road in Illinois, 212.4 miles; Keokuk branch, 41.2 miles; Naples branch, 4 miles; Camp Point to Quincy, (leased) 22 miles—total length of road operated, 522 miles. Three passenger coaches, 60 box freight, 6 mail and baggage and 35 other cars have been built at the shops of the company during the year; and there have been entirely rebuilt, or received general repairs, 20 passenger, 4 sleeping, 19 baggage and mail, 213 box freight, 26 stock, 29 flat, and 85 other cars. The equipment now comprises 105 locomotives, 48 passenger, 4 smoking, 29 mail and baggage, 1,077 box freight, 404 stock, 243 platform, 148 coal, 44 caboose, and 30 dumping cars. During the year 87 miles of new iron have been put in the track,

and 50 miles of iron taken out, repaired and replaced. Four miles of new steel rails have been put in the track; 8½ miles new side tracks built; 148,919 new cross-ties; 4 new passenger and 4 new freight buildings; 36 miles of fences; 1,000 feet truss bridges; 1,200 feet stringer bridges; and 2,780 feet bridges covered. The number of miles run by locomotives has been 1,133,321.

European and North American Railway.

The Annual Meeting of the stockholders of the European and North American Railway for extension westward from St. John, was held at St. John, N. B., on the 16th ult. The meeting was organized with Wm. Parks, Esq., President in the chair, and T. B. Robinson, as Secretary. After disposing of the minutes of last annual meeting, it was on motion of Dr. Botsford, decided by a *viva voce* vote to proceed with reading the directors report. This was then read, and is as follows:

Report of the President and Directors of the European and North American Railway Company for extension from St. John westward for the year ending 16th June, 1869:

To the stockholders of the said company:

GENTLEMEN—The President and Directors of the European and North American Railway Company for extension from St. John Westward have great pleasure in submitting for the information of the stockholders of the said company a report of their proceedings during the past year, in which time the works and operations of constructing the whole line of this road from the city of St. John to the Eastern boundary line of the State of Maine has been pushed forward with great vigor and success, in proof of which we beg to lay before you the following facts and figures. The total length of the road from the west bank of the River St. John at the Suspension Bridge to the State of Maine is about eighty-eight miles; nearly the whole of this distance is graded and ready to receive the rails as soon as they arrive from England. On the 31st May last, thirty-three and a half miles of track had been laid continuously from Brundage's Point, and at the present time a train can be run from the latter place up to the junction of the Fredericton Branch Railway. Tracklaying from Brundage's Point towards St. John and from the stations at Fairville towards Brundage's Point has also been commenced, and the directors believe that by the end of July or early in August the track will be laid so that a train can proceed from the Station at Fairville to the Junction of the Fredericton Branch Railway.

Sleepers sufficient for laying track on the whole line have been delivered and forty-one and three quarter miles of double fencing has been put up.

The rails for the whole length of the road have been purchased, and it is calculated that it will require about nine thousand tons; of this quantity about four thousand and twenty-one tons were received during the season of 1868, about eighteen hundred and thirty tons have already arrived this spring, and the balance about three thousand two hundred and five tons are reported afloat.

Three locomotives and fifty flat cars for ballasting and other purposes have been procured, and are kept constantly occupied in the construction of the road.

Temporary bridges have been constructed, or are in course of construction over all the large streams, and will be used only until the permanent superstructures can be brought from the United States; all bridges over forty feet span are to have iron superstructures.

At a special meeting of the stockholders of this company held on the 2d day of November, 1867, the directors of the company were authorized and empowered to execute a mortgage on the road and to procure and issue first mortgage sterling bonds, by the sale of which bonds they would procure means to complete the road. The bonds were to be like the form submitted and an issue of about two million dollars was ordered. The mortgage was duly executed and two thousand and fifty five first mortgage sterling bonds, of two hundred pounds each, amounting in all to four hundred and eleven thousand pounds sterling were prepared.

On the third day of December, 1867, William G. Case, Esq., of Columbia, Pennsylvania, U. S., was appointed the agent of this company to proceed to England and negotiate and sell these bonds. On the sixth day of May following he concluded an agreement with Messrs. J. S. Morgan & Co., Bankers, London, to introduce these bonds in the London Stock Market, and under this arrangement Messrs. J. S. Morgan & Co., disposed of £38,800 for the net sum of £26,431 15s. 1d., and £41,000 were subsequently sold by Mr. Case for £27,913 6s. 2d. stg. On the 12th December last, the directors of this company sold and transferred to the International Railway Construction and Transportation Company, an association organized in the United States, one hundred and eighty thousand pounds of these bonds, at seventy-one per cent. of their par value, for which this company were to receive forty thousand pounds sterling in cash by monthly instalments, five thousand tons of railroad iron, and the balance is to be paid by them in two years from the date of the sale.

Eleven thousand four hundred pounds of these bonds have been used in procuring rolling stock, and six thousand six hundred pounds of them have been paid on account of the Station Buildings on the road. Of the whole amount of bonds authorized, only £278,200 have been issued, which leaves £132,800 still under the control of the directors.

By the provisions of the Act of Assembly, 27th Victoria, Cap. 3, entitled "An Act to aid in the construction of railways," a subsidy of ten thousand dollars per mile is granted to assist in constructing this line of railway. The whole length of this road is about eighty-eight miles, so that the total amount arising from this source is about eight hundred and eighty thousand dollars. Twenty instalments, or five hundred thousand dollars of this amount, has been called for, which leaves a balance of three hundred and eighty thousand dollars still available.

The total amount of stock subscribed for, and owned by individuals principally resident in St. John is $193,750. Of this amount $116 760 55 has been collected, leaving a balance of $76,989 45 due and unpaid. The Treasurer's accounts showing the total cash receipts of the company up to the 31st May last, to be $1,131,517 88, and the total expenditure up to the same period to be $1,130,476 15, and also a general balance sheet of the company's accounts are submitted.

WM. PARKS, President.
A. JARDINE,
WM B. ROBINSON, } Directors.
LEWIS CARVELL,

Retired bonds	1,000 00
Purchases on account loss by fire at shops, N. H	27,452 03
Materials for coming season	258,735 00
Cash on hand April 1, 1869	114,676 91
Total, as above	$1,795,811 36

From the foregoing accounts it will be seen that the gross receipts of the road for the last fiscal year were about $54,000 less than for the preceding year. This has grown out of the withdrawal of the through Boston Express Freight Train, which was run during the whole of the previous year for the accommodation of the Adams' and Merchants' Union Express Companies, but was discontinued by said companies on the 1st of April, 1868. The withdrawal of this train has reduced the express receipts for the year by the amount of $111,661. There has however been a fair increase in freight and passenger receipts for the year.

Your directors have commenced to carry out the improvements to the road, suggested in their last annual report. About twenty-eight miles of the track were relaid last year with steel rails. Large purchases of real estate were made at New York and New Haven, and points upon the line of the road. A new double track bridge with iron draw and permanent stone piers was erected at Bridgeport; new draws erected at Housatonic and Westport Bridges. A large portion of the road was thoroughly ballasted with good gravel. New passenger cars were purchased and old ones rebuilt.

The construction of new shops at New Haven was commenced during the last winter, and will be carried forward with all possible despatch. About 2,800 tons of steel rails have been ordered for renewal of track the present season. When these are all placed in the track, about one-half of the entire road will be laid with steel. The steel rails thus far have given great satisfaction, and will no doubt result in a considerable saving in the repairs of road, as well as in increased safety to the traveling public. During the past year the condition of the road and its equipment has been greatly improved, and it is the purpose of your directors to continue these improvements until the promise of last year, to make your road the best in the country, is fulfilled.

The Legislature of Connecticut at its May session, 1868, passed an amendment to the charter of the company, authorizing an increase of the capital stock by the amount of $3,000,000, thus making the total capital stock $9,000,000. This $3,000,000 of additional stock has been issued to the stockholders pro rata, and twenty five per cent. thereof called in. Scrip certificates will be issued for the amount actually paid in, and the remaining seventy-five per cent. will be called in from time to time as may be necessary to meet the expenses of the permanent improvements and additions to the road and its equipment. Your directors have the fullest confidence that these improvements will result in increased net receipts, sufficient to give a reasonable return to the stockholders for the additional capital invested; while the facilities offered to the traveling public will be greatly promoted.

The lease of the Canal road will terminate upon the 1st of July next, after which time it will be operated by the New Haven and Northampton Company. The contract with the Hartford and New Haven Railroad Company, will terminate at the same time. Your directors, however, have effected a new arrangement with the latter company for a continuance of connections, running of through trains, and use of our tracks and passenger depot in New Haven, upon just and equitable terms, which arrangement can be terminated by either party upon six months' notice.

The company have 37 engines—28 in good order, 6 in fair running condition, 1 in shop for repairs, and 2 awaiting repairs. During the year 1 old engine has been sold, and 1 new engine purchased of the Rogers Locomotive and Machine Works, Paterson, N. J. One new one is now under contract to be delivered in July.

The company have also 75 passenger, 18 mail and baggage and 44 freight cars, besides 74-234ths of 26 passenger, 12 baggage, 13 freight, 2 postal, 1 compartment and 7 sleeping cars, which belong to the New York and Boston Express Line, and 74 232ds of 4 passenger and 2 baggage cars belonging to the New York and Boston Shore Line. There were also building (to be delivered in May,) 10 first class passenger cars for the New York and Boston Express Line, *via* Springfield, 4 of which are Drawing Room Cars, also 4 first class passenger cars for the New York and Boston Shore Line, making the number of passenger cars now in use, including those owned in common with the two lines to Boston, 127.

There were burnt in a car house at Boston last October, 3 passenger, 1 compartment, 1 baggage, and 1 postal car belonging to the New York and Boston Express Line (*via* Springfield.) All new cars which have been built for the line, as well as the large outlay for repairs of the old cars, some of which have been made equal to new, have been charged to repairs of passenger cars which causes the item "Repairs of Cars" to be so large.

There were put in the track during the past year 53,438 ties and 2,700 tons steel rails. These, with the large quantity of gravel used for ballasting (having run a construction train about eight months,) caused the track to be in excellent condition during the winter just past.

The company have on hand about 60,000 ties and intend to work the gravel train the coming season in ballasting the track. These, with the 2,750 tons of steel rails under contract for delivery this season, will be about sufficient to relay one-half the entire road with steel, and go far towards fulfilling the promise of the company to make their track the best in the country.

The repairs of bridges during the past year have been very heavy, having constructed 2,050 feet of new pile bridge at West Haven, a new double track bridge with iron draw, over Bridgeport Harbor, new draws at Westport and Housatonic River, besides a large expenditure on Westport, Norwalk and Housatonic Bridges, and also the necessary repairs to all other bridges. All the bridges are now considered in a good and safe condition.

The buildings are all in a very satisfactory condition.

Number of miles run by passenger trains, 610,836; by freight trains, 204,551; by construction trains, 22,786—total, 838,173 miles; being 10,650 miles more than the previous year, at a cost of 9⅝ cents per mile for repairs, and 11 1-5th cents per mile for fuel.

Number of passengers carried, 2,256,589½;

do., carried one mile, 69,247,430. Tons of freight moved, 124,955; do., moved one mile, 6,736,230, Average distance traveled by each passenger, 30,71 miles. Gross earnings from passengers per mile, $24,029 90. Average amount received from each passenger, 78.82 cents. Do., for each mile moved, 2.56 cents.

There have passed over the road during the year, 9,158 passenger, and 1,674 freight trains. During the past thirteen years, 18,571,087 passengers have been transported over the New York and New Haven Railroad without an accident to any train, while on that road, that caused the loss of a single life or limb to any passenger so transported.

President.—WM. D. BISHOP.

Directors.—Wm. D. Bishop, Bridgeport; George B. Carhart, George N. Miller, Abraham R. Van Nest, James J. Roosevelt, Wilson G. Hunt, New York; William W. Boardman, Ezekiel H. Trowbridge, New Haven; Jonathan Godfrey, Southport; Nathan A. Baldwin, Milford.

Treasurer.—JOHN T. SHELTON.

Secretary.—EDWARD I. SANFORD.

Superintendent.—JAMES H. HOYT.

Burlington, Cedar Rapids and Minnesota Railroad.

This road is graded from Burlington to Wapello, in Louisa county. From that point to the Iowa River the grading is about half done; thence to West Branch, Cedar county, about seven-tenths of the grading is completed. Throughout the distance of twenty-one miles from Burlington the piles are driven and capped for each bridge and culvert. Five thousand tons of the best T rail have been purchased already, and three thousand tons more are contracted for. Two thousand seven hundred and thirty-five tons have been delivered at Burlington. The capital stock has all been subscribed, and the bonds of the company which were negotiated in the purchase of the iron above mentioned find ready sale in New York at ninety-six cents on the dollar. The New York agent of the company telegraphs assurance of continued financial backing, and says 'Go on with your road.' And 'Go ahead' is the word all along the line, so that by the first day of November next the cars will be running from Burlington to West Liberty, only thirty-nine miles west of Davenport.—*Davenport Gazette, June* 19.

Classification of Directors.

The following is a copy of an Act passed by the Legislature of Wisconsin, entitled an Act to amend the articles of Association of the Milwaukee and St. Paul Railway Company, so as to elect one-third of the Directors each year for three years, and authorizing the bondholders to vote for the election of Directors:

The People of the State of Wisconsin, represented in Senate and Assembly, do enact as follows:

SECTION 1. The articles of Association of the Milwaukee and St. Paul Railway Company are hereby, with the consent of the stockholders as herein-below named, so amended as that at the next annual meeting of the stockholders, they may elect the directors of said railway company as follows: One-third of said directors, as near as may be, to hold office for three years, one-third for two years, and one-third for one year, and thereafter at each annual meeting they shall elect one-third of their board of directors, as near as may be, each year, to hold office for three years.

SECTION 2. The holders of all classes of bonds issued by said company, upon complying with such reasonable terms and proper regulations as shall be established by the company for the registration of their bonds, in the office of the company, may thereafter have and give one vote for the election of directors on each one hundred dollars of the principal of their bonds.

SECTION 3. No action shall be taken under the provisions of this act, until the Secretary of the Milwaukee and St. Paul Railway Company shall have filed with the Secretary of State, a certificate under the seal of the company, certifying that the stockholders of said company have by a majority vote accepted of said act, or of one or the other sections thereof; and in the event of said stockholders accepting one section thereof, and not the other, then no action shall be had under the section not so accepted. The Secretary of the Milwaukee and St. Paul Railway Company, shall certify to and file with the Secretary of State the action of said stockholders thereon.

Safety of Railroad Passengers.

The following is the law passed by the late Legislature of Ohio "To protect more effectually the lives of railroad passengers from casualties by fire:

SECTION 1. Be it enacted by the General Assembly of the State of Ohio, That each railroad company in this State shall, when necessary to heat any of its cars, do so by heating apparatus so constructed that the fire in it will be immediately extinguished whenever the cars are thrown from the track and over turned; and it shall be unlawful for any railroad company in this State to allow any other railroad company, or person, or persons, to run any cars upon its roads unless the heating apparatus in such cars conforms to the requirements herein prescribed.

SEC. 2. It shall be unlawful for any railroad company to light or illuminate any of its cars except with candles properly protected; or to allow any other railroad company, or person, or persons, to run any car upon its roads, unless the manner of lightning or illuminating such cars conform to the requirements herein prescribed.

SEC. 3. Whenever any heating apparatus contemplated by this act shall be offered for sale, and the price cannot be agreed upon between the railroad company desiring to purchase and the seller, an arbitrament concerning such price may be made by the selection of three disinterested citizens of Ohio, one by the seller, one by the purchaser, and one by the two referees thus selected, whose award shall be binding upon the parties. The expense of such arbitrament, if any, shall be borne in equal proportions by the buyer and seller.

SEC. 4. Every railroad company violating the provisions of this act shall be liable to a forfeiture of not more than $500, nor less $100, to be recovered in an action for debt, upon the complaint of any person before a justice of the peace in any country in which such violation may occur, one-half the penalty shall go to complainant, and the other half to the State of Ohio for the benefit of common schools.

SEC. 5. This act shall take effect on the first day of November next. F. W. THORNHILL,
Speaker of the House of Representatives.
J. C. LEE,
President of the Senate.

Passed May 4, 1869.

Iowa Falls and Sioux City Railroad.

A distance of twenty-seven miles of the Iowa Falls and Sioux City Railroad, hence from this place, is ready for the putting down of the iron. By the middle of July forty miles will be ready.

A construction train will be put to work here within ten days. The iron for thirty-three miles of road has been shipped to this point. The iron for the entire distance has been purchased and can be put upon the ground as fast as it is needed. There are 100,000 ties in readiness at this end of the road and an equal number at Fort Dodge.

The laying of track from Fort Dodge west will commence about the 1st of August. The bridge over the Des Moines River at that place will be completed by the 10th of August. The grading between Fort Dodge and Storm Lake will be finished before the ground freezes this fall. In this distance is embraced all the heavy work.

The Constructing Company has resolved to complete the road before the 1st of January, 1870, if it can possibly be done. Unless winter should set in early and with severity there is every probability of the success of the company's purpose.—*Sioux City Journal.*

Granite Railway.

This company is a branch of the corporation bearing the same name at Quincy, Mass. It operates a quarry at Rattlesnake Hill, in which, and in the cutting sheds, over 100 hands are employed. The annual product of the company is 35,000 to 40,000 feet of finished granite. This company has just finished the new block of the Equitable Life Insurance Company, in New York, the stone work of which cost over $100,000. O. E. Sheldon is agent of the company, and J. G. Sargent, Superintendent.

☞ The West Amesbury Branch Railroad is to be changed. It was designed to connect West Amesbury with the Boston and Maine road at Newton, N. H. Now it is proposed to run it across the Merrimac River at East Haverhill, through West Newbury to Groveland, and there connect.

☞ Work was to have commenced on the Mississippi, Ouachita and Red River Railroad at Eunice, on the 10th ult., under the superintendence of Mr. Sickles, the contractor. This step will do much to re-establish confidence in the fidelity of the managers of the road to the interests of the stockholders.

☞ It is stated that the Illinois Central Railroad Company has leased the St. Louis, Vandalia and Terre Haute Railroad for a term of years, and it will not for the present be extended beyond Effingham.

☞ The Des Moine Valley Railroad has been completed to Perry, a point 35 miles northwest of Des Moines, and within fifteen miles of the Northwestern, which is to be crossed by the 10th of August.

☞ The time in which the Cairo and Vincennes Railroad is to be completed through Wabash county, Ill., has been extended to March 1, 1870.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, July 3, 1869.

Stock Exchange and Money Market.

There has been extraordinary activity in the call loan market, since our last, especially among the Stock and Gold firms, who have been compelled to pay exceptionally high prices for accommodation, ranging from 7 per cent. gold premium to the legal rate per annum with the addition of as much as ⅝ of one per cent. per day of a commission, for the use of money from day to day. The pressure has been due in great part to the manipulations of bear operators, who have been endeavoring to break down financial values, but thus far without any very encouraging measure of success. The leading holders of Stocks have been remarkably firm in their views, notwithstanding the severity of the Money pinch, and have not been marketing their property with unusual eagerness, as they have been confidently looking forward to a relaxation in the loan business, and to consequent buoyancy in values, which would compensate them for all their trouble and expense, in carrying their burdens, through the monetary stringency, and against the very adverse influences of an unprecedentedly dear money market, for the bulk of the speculative borrowers. There has been very little movement in the discount line. Strictly choice selections of mercantile paper have been in some request at from 8½ @10 per cent. per annum. Other grades have met with little favor. The city banks have again lost heavily in their deposit, and legal tender lines, the decrease in the former having been 4½ millions, and in the latter nearly 1½ millions. Their specie réserve has been enlarged about 1¼ millions. They have been forced to cut down their loans nearly five millions; while adding a little to their circulation. The U. S. Sub Treasury gained nearly 3½ millions of currency last week, but has been reducing its reserves this week. On Tuesday, it paid out nearly 7½ millions, against receipts of less than three millions, cutting down its balances (of coin and currency,) to about 82⅝ millions, 87⅞ millions on the preceding Saturday. While the city banks made so poor a return last Saturday, a comparison of their averages of assets to liabilities, showed that they held nearly 14½ millions of a legal tender reserve (coin and greenbacks,) more than the 25 per cent. required by the banking act. The call loan quotations at the very close of business on Wednesday went suddenly back to the legal interest in currency and gold on bond and stock collaterals.

The specie reserve of the city banks according to the latest return is $20,257,140, against $7,753,300 same time last year. The city bank deposits are now $181,774 695, against $214,302,206 week ending June 27. 1868. The legal tender reserve amounts to $48,163,920, against $73,853,303 same time last year. The circulation now stands at $34,214,785, against $24 048,721 same time last year. The loans are now $260,431,732, against $276,504 036 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $127,028,457 a day, against a daily average of $139,370,671 the preceding week, and $142,667,771 the week ending with June 9, 1869. The current week's exchanges average about $119 500 000 a day. The city banks, last week, reported a gain of $1.231,696 of specie, with a further loss of $1.469,415 of deposits, and $1,448,568 of legal tender notes. They reduced their loans, $4,910,174; and increased their circulation, $15,956.

The city bank exchanges on Wednesday were $140,923,219, and the resulting balances, $3,420,080.

National Bank notes to the amount of $124,000 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $316,144,128, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $16,348,683, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,795,445. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,892,600; and for the public deposits, $26,144,350—making a total of $369,036,950. The Treasury Department last week redeemed and destroyed $114,000 of worn and mutilated fractional currency, and issued $423,000 of new. The outstanding amount of fractional currency on the 1st of June, was $33,452,523 against $35,330,323, on May 1,

$36,719,912 on the 1st of April, $36,781,548 on March 1, $35,511,127 on February 1, and $34,215,716 on the 1st of January.

The abstract of the report of the National Banks of the City of New York at the close of business, June 12, shows the resources and liabilities to be nearly $453,000,000; including loans and discounts, $17,500,000; specie, upward $15,500,000; legal tender notes, $16,000,000, and three per cent. certificates, $30,500,000.

The U. S. Sub-Treasury receipts, week ending with June 26, were $13,838,425, including $1,850,877 from customs duties; payments, $10,506,125, including $904,451 of coin interest; balance at the close of the week, $87,809,109, against $84,476,809 at the close of the preceding week, showing an increase of $3,332,300. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $2,057,237, including $270,476 from customs; payments, $2,642,896, including $13,529 of coin interest. On Tuesday, receipts, $2,819,855, including $290,860 from customs, and payments $7,374,977, including $87,283 of coin interest. The balance at the close of business on Tuesday stood at $82,668,328, against $86,029,923 a week previous; and $85,195,977 on June 16, 1869. The aggregate receipts of the office in June were $55,052,216, including $8,847,210 from customs, aggregate payments, $47,347,878, including $3,131,675 of coin interest.

The outstanding amount of coin certificates on the 1st of May, was $16,307,200, against $21,672,500, April 1, $28 775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $2,734,000, and retired $1,750 877 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during June, reached $13,593,420.

The U. S. Assistant Treasurer at this port for the past four years, Hon. H. H. Van Dyck tendered his resignation as far back as April 10th, but was induced to retain the office up to the close of the fiscal year, by the urgent solicitations of Secretary Boutwell, who in finally relieving him, pays him a very handsome tribute for the ability, uprightness, and urbanity with which has discharged his unusually onerous duties to the Government and the business public. From July 4th, 1865, the day of his appointment, up to April 10, 1869, when he tendered his resignation, over one thousand millions of dollars in temporary obligations of the Government were paid or converted into funded debt, chiefly through the instrumentality of Mr. Van Dyck's office—while the receipts and disbursements during the three completed years, from July, 1865, to July, 1868, were as follows: 1865–'66, receipts, $617,951,902, payments, $725,412,705; 1866–'67, receipts, $794,173,985, payments, $742,820,794; 1867–'68, receipts, $822,754,361, payments, $867,693,743. Two-thirds of the interest on the entire public debt has also been paid in this office. The record is a most honorable one for the retiring Assistant Treasurer. General Daniel Butterfield succeeded him on the 1st of July, as U. S. Assistant Treasurer at New York. The first purchase of United States 5-20s, $1,000,000 for the Sinking Fund, was made at noon on that day. The first sale of Gold, $1,000,000, will be made at noon on the following Thursday, July 8.

Government revenues have been more than usually prolific, since our last, enabling the Secretary of the Treasury to make a further material reduction of the public indebtedness, as the result of the Treasury business in June. The excises, last week, yielded about 6¼ millions; customs at the port of New York, $1,850,887, and at the outports about $617,000 (in coin) more, making the grand total income for the week equal to about $9,893,345 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, during the fiscal year, ending with June 30, 1869, were $158,287,177. The customs yielded, same time, about 182 millions in gold. The miscellaneous revenues of the fiscal year yielded about thirty millions, making a grand total income for the year of about 370 millions.

Gold has not varied remarkably in price, the activity in Money having checked speculative dealings, and lessened the interest of many operators in the market. The extremes of the week have been 136½@137¾, and the closing quotation on Wednesday was 137¼. A million of Government Gold was marketed on Monday at from 137.45¼@135.54¼. The aggregate of the bids was $2,550,000. The customs call has been moderate. The export inquiry has been somewhat brisker. On Tuesday, the shipments were $683,000 for Hamburg. The Cleopatra brought this amount hither from Vera Cruz recently. On Wednesday, the Cunard steamer for Liverpool took out $53,500. The Government coin interest disbursements are increasing again. On Tuesday, they were $87,283; on Wednesday, $336,767.

The following is the statement of the New York Gold Exchange Bank for the week ending Saturday, the 26th day of June, 1869:

Average am't of loans and discounts	$1,674,673
Average amount of specie	866,206
Average amount of deposits	1,780,840

The Gold Exchange Bank clearances on Wednesday were $82,584,000; and the resulting balances $2,813,472 in coin and $3,104,101 in currency.

The customs of the port on Wednesday yielded $365,000. The U. S. Sub-Treasury disbursed $336,767 of coin interest, on that day.

The customs demand for Gold last week, averaged $308,479 a day; thus far, this week, it has averaged $280,668 a day, or equal to a weekly aggregate of $1,683,998. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $41,490, and since Jan. 1, $8,904,140, against $3,754,046 same time in 1868. The receipts from California, since our last, have been $67,537. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $124,264,458, against $113,129,794 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to June 18th, 1869, $3,391,393, against $3,699,865 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $19,353,741, against $35,923,720 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $16,569,979. The exports of specie, from this port, last week, were $540,767, against $2,530,144 same week last year; total, since July 1, 1868, $36,426,696, against $75,409,749 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $904,451; since July 1, 1868, $87,878,047, against $74,106,000 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to June 18, 1869, were $18,423,308, against $18,939,431 same time in 1868.

Foreign exchange has been quoted rather firmer, and lighter offering, but the dealings have been on a restricted scale. Bankers' prime sixty day bills on London closed on Wednesday at 109⅜@109¾, and on Paris to 5.21¼@5.15; sight bills on London to 110@110½, and on Paris to 5.15c.@5.12½. The offering of produce bills has been quite liberal this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $3,634,936, against $3,113,799 same week last year; total, since July 1, 1868, $168,388,694, against $176,632,551 same time in preceding fiscal year of 1867–'68.

Government securities have been moderately sought after, through the week, yet though the Money pressure has been against a strong market, prices have had their own remarkably well, closing firmly and inclined to buoyancy late on Wednesday.

U. S. sixes of 1881 closed here on Wednesday at 120½@121⅛; U. S. Five-twenties of 1862, ex-coupon, 121⅝@121¾; U.S. Five twenties of 1864 at 116⅞@118; U. S. Five-twenties of 1865 at 117½@118; U. S. Five-twenties of 1865, consolidated, 119⅛@119⅝; U. S. Five-twenties of 1867, 119⅜@119⅝; U. S. Five-twenties of 1868, 119⅜@119⅝; U. S. Ten-forties at 107⅝@107¾ U. S. Six per cent. currency bonds, 105¼@106.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	June 16.	June 23.	June 30.
Consols	92½	93@93⅛	92⅞@93
U. S. 5-20's of 1862	80⅞	80¾	80¾
Erie	19¾	20¾	19½
Ill. Central	95	95	95

Railway and miscellaneous stocks have held their ground well, in the face of the Money pressure, on a moderate volume of dealings, closing briskly and buoyantly on Wednesday, in view of the sudden relaxation in Money.

Business in domestic produce has been moderately active, but at unsettled prices, especially for Breadstuffs and Petroleum, which closed weak as a rule. Middling upland cotton closed buoyantly on Wednesday at 34¼@34½ cts. per lb. The stock of cotton now here is estimated at about 25,000 bales. The receipts at the port this week, have averaged about 1,050 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,271,000 bales, against 2,316,500 bales same time in 1867–8; exports, same time 1,403,000 bales, against 1,691,000 bales same time in 1867–'8; stock on hand at latest dates, 91,000 bales, against 102,000 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 14,714 pkgs., against 11,432 pkgs., same time last year. From Boston, 4,267 pkgs., against 6,110 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves

have been in rather more demand, at from 12½@16c., per lb.; week's receipts, 6,027 Milch cows, at from $40@$110 each, receipts, very dull. Veal calves in slack request at from 5@11½c. per lb.; receipts, 3,597. Sheep and lambs fairly active and rather firmer at from 4@7½c., and 8½@11c. per lb.,; receipts, 23,717. Swine in limited demand at from 9@9¾c. per lb.; receipts, 36,172.

A very moderate trade has been noted in foreign goods, though no important changes have been reported in prices. The total imports of foreign dry goods, last week, were $1,197,486, and the total amount marketed $903,282. The value of foreign merchandise imported last week, was $4,007,448—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $5,204,934, against $5,363,829 same week last year; total since July 1, 1868, $280,-605,388, against $237,392,667 in 1867-'8.

Ocean freights have been less active but quoted firmer. For Liverpool we quote flour at 2s. by sail, and 2s. 3d.@2s. 6d. by steamer, per bbl.; grain at 7½@8d. by sail, and 8d.@8½d. by steamer, per bushel; cotton at $\frac{5}{32}$@$\frac{3}{16}$d by sail, and ¼@$\frac{5}{16}$d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 25s.@40s. by steamer, per ton. Total number of vessels in port on Wednesday, 478.

The New York exports, exclusive of specie, for the week ending June 29, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week.....	$3,113,799	$3,634,936
Prev. reported.....	83,074,998	83,962,953
Since January 1.....	$86,188,797	$87,597,889

The imports for the week ending June 26, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,123,989	$1,197,486
Gen. merchandise.....	4,139,840	4,007,448
Total for the week.....	$5,263,829	$5,204,934
Previously reported....	115,482,108	152,319,585
Since January 1.....	$120,745,937	$157,524,519

The Miller Improvement.

The Miller Coupler, Platform and Buffer has received many commendations from competent judges, but none more flattering than the following letter to the inventor from Robert Harris General Superintendent of the Chicago, Burlington and Quincy Railroad. It is dated May 12, 1869:

"We were unfortunate in having a collision on a curve between one of our passenger trains and a wild engine, neither looking for the other—the wild engine being entirely out of its place—causing an utter wreck of both engines, but not materially damaging the cars and injuring none of the passengers, thanks to the Miller Platform. A few days ago there was a collision between two trains running in opposite directions on the Hannibal and St. Joe, with about the same results. Mr. Mead attributed their comparative freedom from loss to the Platform.

"No improvement that I remember to have adopted has paid as well as this."

Louisville, New Albany and Chicago R. R.

This company has been re-organized, with a capital of $300,000. The following gentlemen have been elected directors: Geo. F. Talman, Moses Taylor, Frederick Schuchardt, James H. Banker, Edward Minturn, Charles P. Leverich, James F. Joy, Geo. L. Schuyler, John Jacob Astor, Wm. H. Bradford, Jonathan T. Wells and Edward Jones. The officers are: George L. Schuyler, of New York, President; William H. Lewis, of New Albany, Secretary and Treasurer; and M. Sloat, of New York, General Superintendent.

☞ According to the Treasurer's Statement for July, the public debt has been reduced during the month of June, $16,410,132 54, and since the 1st of March, $36,460,779 43. The total debt now stands at $2,645,170,294 16. The amount of cash and sinking fund in the Treasury is $156,-167,813 58, leaving the net amount, July 1, 1869, $2,489,002,480 58.

☞ The stock of the new proposed bridge across the Delaware, between Philadelphia and Camden, it is said, has been taken to the amount of $2,000,000, ten per cent. of which has already been paid in. The projectors are sanguine of the commencement of the work at an early day.

☞ The recent payment, by the Cumberland Valley Railroad Company, of the amount agreed upon for right of way between Hagerstown and Williamsport, is regarded as deciding finally their determination to extend the road to the canal.

☞ The earnings of the Albany and Susquehanna Railroad from October 1, 1868, to May 31, 1869, (eight months,) were $430,620 68; and for the corresponding period of the previous year, $328,704 99—an increase of $101,915 69.

Important Patent-Office Decision.

In the Matter of the Application of John W. Cochran for Letters Patent for Improvement in Breech-loading Gun.—The question presented for decision in this case is one of great importance. I have considered it with care, for I am advised that there are many cases pending and constantly arising in the office the determination of which may be affected by my decision. Cochran filed his application Jan. 11, 1859. It was rejected Feb. 8, 1859.

On Feb. 20, 1860, he filed the following paper, and received $20 of his original fee:

To the Commissioner of Patents:

SIR: I hereby withdraw my application for a patent for firearms, now in your office, and request that $20 may be refunded to me agreeably to an act of Congress in such cases made and provided.

WASHINGTON, Feb. 20, 1860. J. W. COCHRAN.

Applicant did nothing further until May 6, 1868, or more than eight years afterward, when he filed a new application, using the same model.

This is the application now under consideration.

It contained three claims, all of which were rejected by the primary examiner. Upon appeal to the Board of Examiners-in-Chief the case was remanded to the primary examiner for inquiry and report, as to the number of patents granted after the withdrawal, and before the second application, in which the same invention appeared in other continuations, or as part of the descriptive matter.

Upon his report, it appearing that the devices specified in the first and second claims were found in some eighteen different patents granted within the period named, but that no patent was found showing the devices specified in the third claim, the Board affirmed the decision of the primary examiner in rejecting the first and second claims, and reversed his decision as to the third claim, which they allowed. An appeal has been taken to me from the decision of the Board in refusing to allow the first and second claims. The question before me may be thus stated: Can an inventor withdraw his application, make no effort to renew it for eight years, during which time the subject matter of the invention has been incorporated into the substance of many subsequent inventions, and then file a new application and obtain a patent which, to support the novelty of the invention, shall relate back to the first application. Many conflicting opinions have been entertained upon this question. The practice of the office has not always been consistent. Patents may be found, doubtless, that have been granted under circumstances similar to those of the present application, and similar cases may also be found where patents have been refused. This is, in part, owing to the fact that, of twenty examiners, any one may pass a patent for issue, and the decision, if favorable to the patentee, is not the subject of appeal. The decisions of the appellate Judges and of the Courts upon this subject have not been more uniform than those of the office.

Authorities upon this question, as upon most questions relating to patent law, may readily be obtained upon both sides. *Prima facie*, it would seem that an application, deliberately withdrawn, was abandoned, and could no longer form a foundation for a second application, and that, if such second application was made, it must be entirely independent, and could derive no support from the first. That, if public use intervened between the withdrawal and the second application, and for more than two years before the filing of the latter, the patent, if granted, must be void.

This was the opinion of the Judge who tried the case of Godfrey *vs.* Eames on Circuit. In that case the first application was withdrawn, and the second filed upon the same day. Upon the trial it appeared that the invention had been in public use for more than two years before the second application, but for less than two years before the first. The Court charged the jury that the continuity of the application was broken by the withdrawal, and that the public use must date back from the second application. The Supreme Court (Godfrey *vs* Eames, 1 Wall, 317) held that this was error; but it is important to note the grounds of this decision. The Court says: "In our judgment, if a party choose to withdraw his application for a patent and pay the forfeit, intending at the time of such withdrawal to file a new petition, and he accordingly does so, the two petitions are to be considered as parts of the same transaction, and both as constituting one continuous application, within the meaning of the law. The question of the continuity of the application should have been submitted to the jury."

It is obvious that the Court do not mean to declare that the two petitions constitute one continuous application, no matter what may be the interval between them, and that the fact of the filing of the second petition is evidence that the intention to do so existed when the first was withdrawn; for they say that there is still a question of continuity to be submitted to the jury, and this obviously means that the jury are to judge of the question of the intention of the patentee in withdrawing the first application, and whether the interval is so long between the applications as to destroy the continuity, or to rebut the presumption that upon withdrawing the first application, the patentee intended to file the second.

The case of Godfrey *vs.* Eames was a suit at law.

If it had been in equity the question of intention and of continuity would have been submitted to the Judge to be determined like any other question of fact. On an application for the issue of a patent, it is the duty of the Commissioner to decide all questions both of law and fact, which go to establish the right or the absence of right in the applicant to a patent. (Marcy *vs.* Trotter, Dunlop J., 1860.) The questions of the intention of the applicant and of the continuity of the application are therefore submitted to the Commissioner for his judgment, precisely as they could be submitted to a Court of Equity. The foundation of judgment is, I think, well set forth by Judge Dunlop in Simpson *ex parte*, in 1861. He says: "A rejected applicant who has withdrawn his application may renew it, provided the renewed application is made within a reasonable time after the withdrawal and return of the fee."

Nothing is more common than to submit the question of reasonable time or reasonable diligence as a question of fact for adjudication. The difficulty of coming to a conclusion does not obviate the necessity of a decision, and no Judge is justified in evading the responsibility of deciding any point which properly arises. Among the analogies which might be referred to is the ordinary case of the failure to present a draft for payment within a reasonable time after it becomes due. The drawee fails, and the drawer is discharged from liability. No time is fixed for the presentation of the draft, but the law declares that it must be presented within a reasonable time, and submits to a Court or jury the question as to what is or what is not reasonable. I am satisfied that, in every case like the present, the Commissioner must judge whether or not the application is continuous, or whether the continuity is broken by a failure to file the second petition within a reasonable time after the withdrawal of the first.

As to what constitutes a reasonable time, I am not without the right of authority. In the case of Simpson *ex parte*, above cited, the learned Judge says: "Section 7 of the act of 1839 fixes what is a reasonable time. There is no reason why a renewed application should have more than two years allowed it, computing the time from the date of the withdrawal. Both classes of applications, original and renewed, are applications for patents, and come within the letter and spirit of the statute." This view is enforced by the fact that, by the act of March 3, 1867, the applicant is required to complete and prepare his application, for examination within two years after the filing of the petition; and that, in default of such preparation the application shall be regarded as abandoned. These provisions of the patent law seem to establish a *quasi* statute of limitations, which may safely form a guide for the Commissioner in determining the question of reasonable diligence. It must be remembered that withdrawn applications were those which had been but once rejected. The inventor might have insisted upon a second examination—might have appealed to the Commissioner, and from the Commissioner to one of the Justices of the Circuit Court. He did none of these things. While claiming to have been rejected by the fault of the office, he took no single step to correct the action of which he complained. He withdrew his application, waited eight years, and now applies again. Meanwhile his device has been copied in various forms in no less than eighteen subsequent patents. If his application takes date from the filing of the new petition, he is clearly anticipated by these patents.

If it is to date back to the filing of the first petition, these subsequent patentees will be infringers. It is not a sufficient answer to say that the first rejection was improperly made, and that therefore all evils which may follow the granting of his patent at the present time are the fault of the office and must be charged to the Commissioner. This is a fallacy. If the office was in fault in the original rejection, the law provided a mode of correcting the fault, which it was as much the duty of the applicant to pursue, as it was to file his original application. The law neither points out nor recognizes such a mode of correction as a withdrawal of the application for the purpose of endeavoring, under some new Commissioner, to obtain a reversal of the sentence. If the patentee refuses to adopt the remedy given by the law, and substitutes one of his own making, he does so at his peril; and, when he applies again, it is as much the duty of the Commissioner to protect subsequent *bona fide* inventors and the innocent public against his *laches*, as to protect him against the errors of former examiners. The remarks of Chief Justice Carter, in Goodyear & Bacon *vs.* Hills, 3 Fisher, 134, in commenting upon the Cummings Patent, are strongly in point. It is to be noted that although in this case the second application had been made eight years after the first, yet, that the first had never been withdrawn.

Judge Carter says: "The law-makers have admonished inventors and the public that if before an application they suffer more than two years to elapse in the use of the invention, they shall absolutely forfeit all right and title thereto. It is true the legislative admonition relates to the period preceding the application. But, it appears to me, as far as the Court can be guided by its own judgment, that the inventor is left under the dominion of common law principles, in regard to any laches by which the application may be followed.

Is it the law that because an inventor files his application, which is refused by the office, he may sleep upon his rights indefinitely, and that at any period in his lifetime, or that of his representatives, the application may be received, as against the public? I think not. *Prima facie*, I think he would have to show a reason why he should be so permitted. The judgment of condemnation by the office advertises to the country, at least, that he stands in no better position than before the application was made. The country is advised, by the deliberation of the only tribunal provided by law for the ascertainment, at that stage of the invention, of his right, that he has none. More especially is he himself advised of that fact, for he is a party to the proceedings, and more immediately damnified by the rejection of the application. That rejection would at least be regarded in the logic of equity as a notice to him to proceed with diligence to traverse and reverse the judgment of the office." In Rich & Lippincott, 2 Fisher, 1, Mr. Justice Grier says, in his charge to the jury: "If you find that the application of 1836, renewed in 1837, was for this same subject matter now patented, and if such application was not withdrawn by Fitzgerald, but the delay was caused by the conduct of the Commissioner of Patents in refusing to grant the patent for the same invention since patented, then Fitzgerald should not be considered to have abandoned his invention to the public. On the contrary, if you believe that the applications of 1836 and 1837 were not for the same invention with that patented, and, therefore, was refused by the Commissioner, or was withdrawn and abandoned by the applicant,

and continued so until Enos Wilder got up an application for the present patent, and, in the meanwhile, the invention had gone into public use for more than two years, then you will find this point for the defendants." See also Bell *vs* Daniels, 1 Fisher, 372. Mr. Justice Fisher, who now sits in appeals from this office to the Supreme Court of this District, has in the late case of Rowley *vs.* Mason, made a decision, the reasoning of which logicaly leads to the conclusion which I have arrived at in the present case. If the applicant had been put into interference with one of the 18 inventors who have shown his device in their patents, and had attempted to prove an invention made eight years before and dropped, he would, under the authority of that case, be held to have abandoned his invention. *A fortiori* must this be so, when we find that instead of using diligence to obtain a patent, he deliberately and formally withdrew his application from the office, and gave no sign of life for eight years, while eighteen patents were granted more or less affecting his rights? While it need not be asserted that the present applicant was setting a trap for these subsequent patents, it is obvious that to sustain the present application would be to offer strong inducements to others to set such traps hereafter.

The decision of the Board of Examiners-in-Chief is affirmed.

June 9, 1869. S. S. FISHER, Commissioner.

Journal of Railroad Law.

WHEN RAILROAD COMPANIES ARE RESPONSIBLE FOR INJURY TO PASSENGER IN A CABOOSE ATTACHED TO FREIGHT CARS—EFFECT OF PAYMENT OF FARE.

All the material facts of the case of Edgerton *vs.* The New York and Harlem R. R. Co., (39 N.Y. p. 227,) recently decided in New York are embodied in the following opinion by

GROVER, J.—The only negligence imputed by the defendant to the plaintiff was in riding upon the caboose attached to the freight train, where it is claimed, he was not a rightful passenger. The case shows, that, although the caboose was not properly a passenger car, and was used principally for carrying the employees of the company, yet that passengers were carried thereon, from whom the company received the usual fare. The company, therefore, incurred the same liability to such passengers for their safety as it was under to passengers upon the regular passenger trains. As to the plaintiff's right as a passenger there, the question is, not whether he had a legal right to a passage upon the check he had received on board the other train, but whether the conductor recognized such right instead of payment of fare to him by the plaintiff. The plaintiff had paid his fare to the company for a passage from New York to Albany, and received a ticket as evidence thereof. This ticket had been taken from him and the check given as a substitute therefor. The conductor of the train upon which the plaintiff was injured, at first refused to recognize the right of the plaintiff as a passenger upon his train by virtue of the check, and demanded and received fare from him. This gave the plaintiff clearly all the rights of a passenger, and these were in no wise impaired by the subsequent return of the money received from the plaintiff and the recognition of his rights under the check by the conductor. These acts are within the authority delegated to the conductor by the defendant. There was, therefore, no negligence legally imputable to the plaintiff. The evidence showed, that the car in which the plaintiff was riding in part ran off the track, and was broken, by means of which the plaintiff was injured. This was *prima facie* evidence of negligence of the defendant. The latter not only had the entire control of the vehicle, but also of the track upon which it was run, and it owed a duty to the plaintiff to keep both in a perfect and safe condition for the transportation of passengers with entire safety, so far as human prudence can accomplish these results. Experience proves, that, when the track and machinery are in this condition, and prudently operated, the trains will keep upon the track, and run thereon with entire safety to those on board. Whenever a car or train leaves the track, it proves, that either the track or machinery, or some other portion thereof, is not in a proper condition, or that the machinery is not properly operated and presumptively proves, that the defendant, whose duty it is to keep the track and machinery in the proper condition, and to operate it with the necessary prudence and care, has, in some respect violated this duty. It is true, that a bad state of the track or machinery may have resulted from the wrongful act of persons for whose conduct the defendant is not responsible, and the injury to the passenger may have resulted therefrom, and in such a case, the company is not responsible, but such cases are extraordinary, and those guilty of perpetrating such acts are highly criminal; and, therefore, there is no presumption of the perpetrating of such acts by others, and the company, if excusable upon this ground, must prove the facts establishing such excuse. [Curtiss *vs.* The Rochester and Syracuse Railroad Company, 18 N.Y., 534, and cases there cited.] The defendant owed to its passengers the same duty to keep its track at the Berkshire crossing safe, irrespective of the question, upon which company the duty devolved as between themselves, as it did in respect to any other portion of the track. The complaint contained a general averment, that the injury was received from the negligence of the defendant and its employees, and it is therefore immaterial, whether the proof established the particular negligence specified in the complaint, some negligence being shown. The motions for non-suit were properly denied. The Court charged the jury, that the plaintiff was a passenger, and was not guilty of negligence in being on the freight train, to which the counsel for the defendant excepted. This exception, and also that taken to the charge relative to the Berkshire crossing, have been considered in connection with the exception to the denial of the motion for a non-suit. The Court further charged, that the defendant was bound to show and give some explanation of the cause of the accident. That the burden is upon them to show, that they exercised the prudence and skill in the preparation of their track and their cars, and in the management of them, demanded by the law. Unless they prove themselves free from negligence, they are liable. The defendant's counsel excepted to this portion of the charge. This portion of the charge must be understood in reference to the facts of this case, and as applied as such facts. In this view, it was not erroneous. The facts showed a *prima facie* case of negligence against the company, either in the condition of the track or cars, or in running the train. The charge in substance was, that the defendant must by proof answer and rebut this *prima facie* case against it, and show itself free from the negligence to be presumed from the facts proved by the plaintiff, or it was liable. The charge imports nothing more. It does not at all imply, that, to entitle the plaintiff to a verdict, it was not incumbent upon him to prove that his injury resulted from the negligence of the defendant.

The judgment must be affirmed, with costs. All concur.

Judgment affirmed.

Mississippi River Railroad.

We invite attention to the advertisement of the Mississippi River Railroad Company, which appears in another column. Thirty-six miles of the road from Memphis northward to Covington, Tenn., are to be built immediately, and bids are asked for. The road has been abundantly subsidized by the counties on its line, its route is easily accessible, and cheap transportation by way of the Mississippi River can be had to all points on it, and the job promises to be a long one, for there is a great deal of the road to build.

☞ The Queenstown and Harrington Railroad survey has been completed, its route located, and the grading has been begun at the Harrington end of the road. The route, as laid down, is as follows: Commencing a little below Harrington, at a point in a line with the Junction and Breakwater Railroad from Houston to Harrington, it will be run in a direct line until it nears the river, when a curve will be made so as to cross at the Stakes, and thence on to Broad Creek, on Kent Island, crossing the Maryland and Delaware Railroad between Ridgely and Greensborough, about four miles above Denton.

☞ The Legislature of Massachusetts, during its recent session, chartered twelve railroad corporations as follows, the accompanying figures indicating the capital stock of each: Bedford, $150,000; Taunton and Providence, $600,000; New Bedford and Taunton, $350,000; Taunton and Attleboro', $200,000; Hopkinton Branch, $200,000; Monadnock, $50,000; Athol and Enfield, $500,000; Amesbury, $150,000; Salisbury, $100,000; Essex Branch, $200,000; Massachusetts Central, $3,000,000, with leave to increase to double that amount; Holyoke and Westfield, $200,000 to $350,000.

☞ A railroad meeting was held at Kirksville, Mo., on the 24th ult., and the most practicable route adopted for a new railroad from Quincy, Ills., through Edina and Kirksville, Missouri, thence to a point on the Missouri River opposite Brownsville, Nebraska. A board of directors was chosen, and C. A. Savage, of Quincy, elected President.

☞ C. A. Savage of Quincy, Ills., has been elected President; T. T. Woodruff, Secretary, and Edward Wells, Treasurer of the Quincy, Alton and St. Louis Railroad Company.

☞ The Common Council of Quincy, Illinois, have voted $250,000 to the Quincy and Nebraska Railroad, and private persons have subscribed $100,000.

☞ The Chesapeake and Ohio Railroad was completed to White Sulphur Springs on the 22d ult., and regular passenger trains commenced running to that place on the 30th.

From Herapath's Railway Journal.

Railway Economy.---The Locomotive.

Our previous articles have been devoted to a consideration of the means employed in the locomotive engine to generate the power required to draw the trains. We have endeavored to show how a gradual improvement in economising the cost of producing that power has been effected, and by what means a still further saving may be secured. We have now to treat of the cost of keeping the engine in working order, and providing against the inevitable wear and tear which all moving machines are subject to more or less according to circumstances.

Of all engines or machines the Locomotive is perhaps subjected to a greater amount of wear and tear than any we are acquainted with. There is scarcely any part of the engine that is not constantly undergoing deterioration and the consequent renewal and repair required to make it good. The fire-box is always being burnt away and getting thinner, almost imperceptibly it is true, but still the process is always going on, and after a time the metal becomes so reduced in thickness that at last a new fire-box becomes necessary; the same with the tubes, the destruction of which is even more rapid than the fire-box. This arises from an additional cause beyond the burning away by the heat of the fire, viz., the rubbing or grinding away the metal by the small ashes which are driven through them by the blast with considerable velocity; then the cylinders, pistons, and slides are always wearing, and so are axles, axle and connecting rod brasses, valve gearing, &c., and last, not least, the tyres of the wheels. The only parts of importance which are not actually subjected to wear and tear are the frames of the engine and the wheels, but even these unless made in a very substantial and solid manner, from the constant jar and vibration, after a time become shaky, and require to be renovated.

It is not surprising that the wear and tear of the Locomotive is excessive as compared with other engines, for all the conditions under which it works favor such a result. The combustion of the fuel is more rapid, and the heat of the furnace more intense, than in any other kind of engine. In the boilers of the Cornish pumping engines, which are the extreme representatives of slow consumption, the consumption of coal per hour on each square foot of the fire-grate is not more than 4lbs., and in other ordinary stationary engine boilers it ranges from perhaps 10lbs. to 20lbs. at the outside; but in Locomotive boilers the very lowest consumption is probably 50lbs. and this mounts up in some engines to perhaps 100lbs. of fuel consumed on each square foot of fire-grate per hour, so that the highest rate of consumption in the Locomotive is 25 times as great as the lowest burning Cornish boilers, and the average at least five times as great as in the quickest burning furnaces of ordinary stationary boilers.

Then, again, the speed at which the piston valves, pumps, and gearing of the locomotive are driven is something enormous when compared with the ordinary jog-trot speed of 220ft. per minute originally assigned to the old-fashioned Boulton and Watt engines. The speed of the piston in modern locomotives may be taken at from 500ft. to, perhaps, in fast express engines, 1,000ft. per minute, so that in this also there is a nearly corresponding excess over ordinary stationary engines, and thus, as with horses, "it is the pace that kills." These two causes would of themselves be sufficient to account for the rapid deterioration and wear and tear, but besides this the whole machine, instead of having the advantage, like a stationary engine, of being itself at rest on a solid foundation, is driving itself along and dragging the train behind it at a high velocity, and is in consequence subjected to a variety of concussions, jolts and strains, tending to loosen the parts that are fixed, and to derange those that are working; add to this the dust and grit stirred up from the road, which is for ever insinuating itself between the working parts and grinding them away, to say nothing of the skidding and abrasion of the tyres, and we may form some idea of the difficulties the Locomotive has to encounter in fulfilling its daily task.

While all these causes of wear and tear are incessantly at work to shorten the life of the modern Locomotive, they are at the same time so variable, and are modified to such a large extent by the actual speed of the trains, the nature of the curves and gradients, and the state of the permanent way, that it is one of the most difficult problems to arrive at any correct general data as to either the life of the engine itself or the annual cost of repairs necessary to keep it in good working order.

When Mr. Bidder, some twenty years ago, conceived the idea of letting the working and maintenance of the rolling stock of the North Staffordshire railway by contract, he estimated the life of an engine at 300,000 miles run, and the cost of renewing and keeping the engine in good repair during that time at 1½d. per mile. The contract was taken on this basis to work the line for ten years. Is appears, however, not to have turned out a very profitable one for the contractor, as at the expiration of the time he declined to renew it, and this accords with more recent experience, for both these data are considerably modified, the life of an engine being now estimated at from 150,000 to 500,000 miles, while the cost of maintenance more nearly approaches 3d. per mile than 1½d.

With regard to the first, the term "life of an engine" is at least a vague one, for it is difficult in some old engines to define either their beginning or end, as we believe there are some now in existence which have scarcely a single piece of the same material in them of which they were originally composed, and therefore if all the parts of an engine are constantly renewed as required, there is no reason why its life should not be indefinite; but the fact is, as time passes and improvements are introduced, such important alterations or modifications have to be made in the working parts, that the original model of 12 or 15 years ago no longer satisfies the requirements, and it is abandoned; and as about this time also the most important repairs of all would have to be made, viz., the entire replacing of the whole of the boiler, when this time arrives it is found more desirable for all reasons to supply the place of the old engine by a new one altogether.

The life of a boiler has been found to be about 350,000 train miles, but this may probably on some lines go up to 400,000 or even 500,000 miles, as its wear and tear would depend greatly on local circumstances, and particularly on the chemical qualities of the water employed. Assuming that the life of the engine is determined by the endurance of the boiler, and that if under favorable circumstances it will last the 500,000 miles, then during that time the fire-box will probably require to be renewed at least three times, the tyres of the wheels five or perhaps six times, the crank axles three or four times, and the tubes probably from seven to ten times; and the cost of making these renewals and repairs, together with other minor ones, will amount to from 12 to 13 per cent. of the original cost of the engine, and according to its size from 2½d. to 3½d. per train mile run by it. This cost as compared with the cost of fuel taken at an average price will be found to exceed it in about the proportion of 3 to 2, or in round numbers to be about 50 per cent. greater; unfortunately, however, it does not appear to offer a like field for the exercise of economy as the other, for high speeds are a necessity, and so long as they prevail the wear and tear must be proportionately heavy. This seems to be borne out by the experience of the last thirty years, for while, as we explained in a former article, the cost of fuel has been reduced something like 60 or 70 per cent., the cost of renewals and repairs has scarcely in that time been reduced 25 per cent., although it must be admitted that this reduction has been accompanied with considerable increase in speed; but, on the other hand, it is no doubt principally due to the improved and more economical means introduced of executing the repairs than in a diminution of the actual wear and tear, and this, together with a close attention to the practical details, the selection of the best materials, the use of suitable feed-water, and adapting the engines to run round the sharp curves now in vogue, are the chief means by which economy can be effected. A great advance has been made in the use of steel in the place of iron for the axles and for the tyres of the wheels, by which their durability has been greatly increased. The best iron tyres usually require re-turning after running about 10,000 miles, and are completely worn out by the time they have run about 30,000 miles, but good steel tyres will run about 30,000 miles before they require re-turning, and will complete on an average 90,000 or 100,000 miles before they are worn out.

There is one great source of wear and tear to which the wheels of the tender and break vans are subjected, and for which a remedy should if possible be found, viz., the skidding of the wheels on the rails when the break is applied. This system of pulling up the train is most injurious and unmechanical; not only is the material of both the wheel and the rail rapidly ground away, but the wheel, after great pains have been bestowed upon it to turn it true is ground into a number of flat facets, so that if accurately guaged instead of being circular it would present the figure of a many sided polygon, which at high speeds greatly increases the jolting and concussions, adding to the wear and tear of both rails and rolling stock. It certainly does appear absurd to go through a double process in putting the break into action by first applying the break-block to retard or stop the wheel, and the wheel to the rail to stop the train, and by so doing injuring both the wheel and the rail, when the break-block might just as easily be applied to the rail itself, and both the wheel and the rail saved, and a greater retarding power obtained. Another source of destruction to the tyres is the sharp curves that have to be traversed by engines with long wheel bases, fixed axles, and rigid framing. These evils are beginning to be understood, and a remedy has been proposed by Mr. Fairlie in his twin bogie engine, the working of which has proved very satisfactory, and Mr. Adams with the same view has introduced radial axle boxes which by providing a lateral motion in the axles, allow the wheels to accommodate themselves to any curve they may be passing round. These improvements are all in the right direction, for it is only by assimilating the engine to the work it has to perform, enabling it to go through that work in strict accordance with mechanical principles, that wear and tear will be reduced and economy effected.

☞ The Providence *Journal* says that the Boston, Hartford and Erie Railroad Company have filed their $100,000 bond, with $100,000 in money as collateral security, in the office of the General Treasurer of Rhode Island, conditioned to locate their new railroad from Providence to the State line in Cumberland by the first of January next, and to construct and complete it within two years from that time. The surveys of the whole line in both States have been made.

☞ The Peru, Warsaw and Goshen Railroad Company was recently organized at Warsaw by the election of a board of directors, with Dr. E. W. H. Ellis, as President; Judge J. S. Frazier, Vice-President; C. W. Chapman, Treasurer; and Gen. M. S. Hascall, Secretary. This company proposes to build a southern outlet for the line now in operation from White Pigeon, through Three Rivers, Kalamazoo, and Allegan to Grand Rapids.

☞ The new road between Columbia, S. C., and Augusta, Ga., has been completed. Trains are now run through from Charlotte, N. C., to Augusta, Ga.; running time, 12 hours.

Iowa Railroads.

The gross earnings of the Iowa Railroads for the year 1868, were as follows:

Chicago and Northwestern	$3,371,682
Dubuque and Sioux City	970,696
Dubuque Southwestern	172,427
Cedar Falls and Minnesota	55,465
Sioux City and Pacific	127,000
Des Moines Valley	710,240
Chicago, Rock Island and Pacific	1,051,828
Burlington and Missouri River	841,653
Council Bluffs and St. Joseph	153,854
McGregor Western	498,235
Keokuk and St. Paul	71,846
Dunleith and Dubuque Bridge Co	2,708
Dubuque street Railroad	10,758

☞ The May products of the Lake Superior copper mines were as follows: Hecla, 250 tons; Calumet, 175 tons; Quincy, 115 tons, 768 pounds; Huron, 53 tons; Ridge, 13 tons, 1,515 pounds; Knowlton, 8 tons, 1,492 pounds; Evergreen Bluff, 11 tons, 129 pounds; National, mass, barrel and stamp, 18,464 pounds; Pewabic, mass, barrel and stamp, 50,155 pounds; Franklin, mass, barrel and stamp, 72,387 pounds.

☞ The last rail on the twenty miles of the Grand Rapids and Indiana Railroad, on the completion of which, by the first of July, a valuable land grant depended under the Michigan laws, was laid on Monday, the 21st of June.

Mississippi River R. R.

TO CONTRACTORS.

SEALED PROPOSALS will be received by the undersigned, at the office of the Company, No. 450 Main street, Memphis, Tennessee, until 12 o'clock noon, on the 20th day of July, 1869, for the Clearing, Graduation, Masonry, Bridging and Crossties necessary to complete the above road from Memphis to Covington, about thirty-six miles, ready for the iron rails. A large portion of the work is heavy, and well worthy the attention of contractors. As it is the intention of the Board to place the entire road to Cairo under contract as soon as the surveys are completed.

Proposals may be made for cash, or for county bonds, or for part cash, county bonds and stock.

Plans, profiles and specifications are now ready for inspection at the Company's office, by application to Thos. H. Millington, Chief Engineer, from whom all necessary information may be obtained.

Proposals will be received for the whole work, or in divisions.

The right is reserved to reject any and all bids not deemed satisfactory.

10 RAILROAD CONTRACTORS.

Memphis, El Paso and Pacific RAILROAD COMPANY.

Office of the Chief Engineer,
Memphis, El Paso and Pacific Railroad Company,
66 Exchange Place,
NEW YORK, June 8th, 1869.

SEALED PROPOSALS will be received at the above Office, until **September 1st, 1869,** when Contracts will be awarded, for the GRUBBING and CLEARING, GRADING, MASONRY, BRIDGING, BALLASTING, CROSS TIES and TRACKLAYING of the following portions of said Railroad:

FIRST—The last Fifteen miles on the First Division of One Hundred and Fifty Miles, between Jefferson and Paris, Texas, commencing Eight miles east and extending Seven miles west of the town of Clarksville, in Red River County.

SECOND—One Hundred and Fifty miles, embracing the Second Division, commencing at Paris and extending westward, to Palo Pinto County.

Specifications, Profiles, Maps and Plans can be examined after the FIFTEENTH OF AUGUST, 1869, at the ENGINEER'S OFFICE, in NEW YORK or JEFFERSON.

Proposals must conform to the specification which will be furnished upon application at either of the above places after August 1st, 1869.

Evidence of ability to complete contracts will be required and a percentage retained of estimates until each section of five miles is finished.

Work upon the First Division must be completed by March 1st, 1870.

The Second Division must be finished by October 1st, 1870.

Every facility will be furnished those wishing to inspect the ground on the line of the road, by application in person at the Engineer's Office in Jefferson.

J. M. DANIEL, Engineer in Chief,
Memphis, El Paso and Pacific R. R. Comp'y.

Pittsburg and Connellsville Railroad.

ENGINEER'S OFFICE PITTSBURG & CONNELLSVILLE R.R.
Pittsburg, June 3d, 1869.

THE GRADUATION, MASONRY and BALLAST, upon the following Sections of the PITTSBURG AND CONNELLSVILLE RAILROAD, have been allotted, by the President and Directors of the Company, to the parties named below in connection with the same—viz:

To RALPH JONES & CO.—Sections, 67, 68, 69, 70, 71, 72, 75, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105.
To JOHN DONAGHUE & BROTHERS—Sections 107, 143, 144.
To MEYER, BRODHEAD & CO.—Sections, 113, 114, 120, 121, 122, 123, 124, 125, 126, 127.
To DEWEES & CLARK—Sections 118, 119.
To PATRICK KEATING—Section 108.
To JOHN WILHELM—Section 109
To EDWARD KERNS & BROTHER—Sections 131, 132, 137.
To BRACKEN & FITZPATRICK—Section 133.
To B. B. GONDER—Sections 134, 135.
To ALEXANDER B. BUCHANAN—Section 136.
To P. R. HOWLEY—Section 138.
To GEORGE W. HARRISON—Section 139.
To NATHAN SHIPLEY—Sections 141, 142.
To MANFULL & ROSS—Sections 77, 78, 79.

The remaining 35 Sections between Connellsville and Cumberland having been contracted for previously, the whole line of 86 miles between those points is now under contract to responsible parties, and there will be ample and steady employment for labor thereon during this year and the next.

ROME, WATERTOWN AND OGDENSBURG RAILROAD.—VICE PRESIDENT'S OFFICE, No. 12 College Place, New York, June 12th, 1869.—This Company will pay a semi-annual dividend of FIVE (5) per cent., free, on and after the 15th July, to stockholders of record at this date. Transfer books will remain closed from date till the 1st July. Stock registered in New York will be paid at the Mercantile Bank for 60 days. All other at Watertown.

3125 J. A. LAWYER, Treasurer.

Proposals for $2,767,000
Tax Relief Bonds of the City of New York.

SEALED PROPOSALS will be received at the Comptroller's office, until TUESDAY, June 29, 1869, at 2 o'clock P. M., when the same will be publicly opened, for the whole or any part of the sum of $2,767,000, of "Tax Relief Bonds of the City of New York," authorized by Sec. 2 of Chap. 876, Laws of 1869.

Said bonds are to be issued for the purpose of providing means to redeem the Family Aid Fund Bonds of the City of New York, due Nov. 1; that portion of the county debt, due Nov. 1, and the quota of the State tax to be levied on account of State debt chargeable to the County of New York during the present year.

The bonds will bear interest at the rate of seven per cent. per annum, payable semi-annually, on the 1st day of May and November in each year, and the principal will be redeemed on the 1st day of July, in the year 1879.

The proposals will state the amount of bonds desired, and the price per $100 thereof; and the persons whose proposals are accepted, will thereupon be required to deposit with the Chamberlain the sums awarded to them respectively, together with any premium thereon.

The "Family Aid Fund Bonds, No. 5," of the City of New York, due Nov. 1, 1869; the Bonds of the County of New York, entitled "New York County Bonds for the repayment of Taxes," due Nov. 1, 1869; and the "Revenue Bonds of the City and County of New York, of 1869," will be accepted at their par value and accrued interest, in payment, on account of any proposals made for the aforesaid Tax Relief Bonds of the City of New York, which may be accepted; and in such cases the adjustment will be made at this office and the new bonds issued.

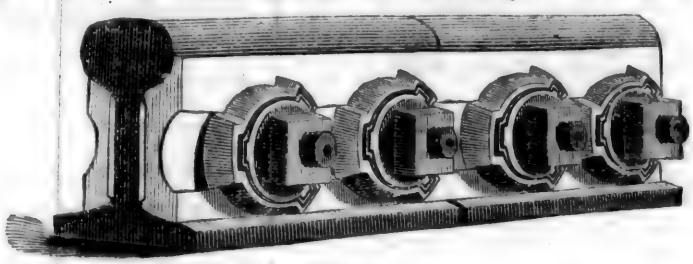
On presenting to the Comptroller the receipts of the Chamberlain for deposits made with him on account of the aforesaid loan, the parties will be entitled to receive bonds for equal amounts of the par value of the sums awarded to them, bearing interest from the dates of payment.

This loan, without increasing the debt of the City, offers an investment to companies and individuals unrivaled in security and for a period of years.

Each proposal should be sealed and indorsed, "Proposals for Tax Relief Bonds of the City of New York," and inclosed in a second envelope addressed to the Comptroller.

The right is reserved, on the part of the Comptroller, to reject any or all of the bids if, in his judgment, the interests of the Corporation require it.

RICHARD B. CONNOLLY, Comptroller.



City of New York, Department of Finance, Comptroller's Office June 19, 1869.

☞ The time for receiving Proposals for the above designated Bonds IS HEREBY EXTENDED to THURSDAY, July 8th, 1869, at the same place and hour.

RICHARD B. CONNOLLY, Comptroller.

Department of Finance,
Comptroller's Office, June 24, 1869.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

Atlantic and Gt. Western Railway.

A meeting of bond and debenture holders, who had deposited their securities with Messrs. Morgan & Co., under the agreement of 15th May last, was held at the London Tavern on Tuesday, to hear a statement as to the present position of the railway in connection with the lease to the Erie, and to appoint an unpaid committee to protect the interests of the bond and debenture holders. Mr. D. Chadwick, M. P., on being called to the chair, explained the position of both companies. He said he hoped, as the committee to be proposed would be an unpaid one, that there would be a greater chance of it working successfully. It would act in the common interest of all concerned, and not for any particular section of holders, and an effort would be made to get the lease with the Erie annulled, so that they might have possession of their own property once more. The object of the Erie seemed to be to get permanent possession of the Atlantic and Great Western. They had introduced a bill into the New York Legislature for consolidating the two railways, and had also instituted certain proceedings. The lease would, no doubt, be beneficial to both parties if honestly carried out. The Rev. Mr. Watkins moved and Mr. G. W. Hastings seconded the following resolution:—"That a committee with power to add to their number, and whose services shall be honorary, be appointed, to select and appoint out of their number an executive committee to take such steps as they may deem desirable or may be advised for the protection and settlement of the claims and interests of the bondholders and debenture-holders of the Atlantic and Great Western, and with power to engage such legal assistance as may be requisite, and that such committee consist, in the first instance, of Mr. D. Chadwick, M. P., Mr. Hastings, Rev. Mr. Watkins, Mr. Brown, Mr. Thomas (Bristol), Mr. T. Matthews, Mr. J. G. Matthews, Rev. Dr. Haycroft, Mr. Curtler, Mr. H. Grierson (Darlington), Mr. Thorpe and Mr. Beckley." A discussion ensued, in the course of which the conduct of the Erie was strongly condemned, and a determination was evinced to use all legal means for determining the lease. The resolution having been carried unanimously, a discussion arose upon the second resolution, which referred to the depositing of bonds, to be transferred from Messrs. Morgan & Co. to trustees on behalf of the committee, and it was explained that a necessity might probably arise for the production of the actual bonds, in order to validate legal proceedings in New York. It was ultimately arranged that the securities should be withdrawn from Messrs. Morgan, and be held by the owners at the call of the committee, if they found it necessary that they should be used in the legal proceedings. In order to provide funds it was further agreed to subscribe 1 per cent. on the nominal value of the various securities, a first payment of 5s. per share to be made at once.—*London Railway Times, June 20.*

Union Pacific Railroad.

REPORT OF THE GOVERNMENT COMMISSIONERS.

The following is the report submitted to the Secretary of the Interior by Gen. G. K. Warren and Hon. James F. Wilson, of Iowa:

WASATCH, Utah, June 9, 1869.

To the Hon. J. D. Cox, Secretary of the Interior:

Sir—In accordance with the instructions of the Department, dated the 18th of May, 1869, the undersigned, Commissioners of the Union Pacific Railroad, have examined the Thirty-ninth Section, extending from the 1000th to the 1020th mile-post west from the initial point on the Missouri River, near Omaha, and forward herewith map, profile and report submitted to us by the Chief Engineer of the road, showing the alignment and grades, and giving a full statement of the kind and conditions of the structures, equipments, &c., which we are satisfied are a correct representation of this Section.

This section is well constructed and ready for immediate service, in accordance with and as required by section 4 of the "Act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military and other purposes," and we therefore recommend its acceptance by the Government.

Respectfully submitted,

(Signed) G. K. WARREN,
Brevet Maj. Gen. U. S. A.

(Signed) JAMES S. WILSON, Com.,
Members of Commission.

The Commissioners of the Union Pacific Railroad, in accordance with the instruction of the Department, dated May 18, 1869, have also examined sections of the road extending from 1020th mile post to the 1085 88-100th mile post west, and report that to complete the unfinished work on the section extending from the 1020th to the 1040th mile post west will require about $58,450.

To complete the unfinished work on the section extending from the 1040th to 1060th mile post west will require about $30,000.

To complete the unfinished work on the section extending from the 1060th to the 1080th mile post west will require about $15,500.

In regard to the section extending from the 1080th to the 1085 88-100 mile post west, the Commissioners say: "Heavy expense has already been incurred by the company in grading this part of the line, and the grades and curves are all within the limit prescribed by law."

"To complete the unfinished work on this section will require about $126,500 in reducing the present grades from 116 to 80 feet per mile, as originally intended, and in filling up places now occupied by temporary trestles. The location adopted is such that the work done is not lost in changing to the lighter grade."

The Commissioners say: "In all other respects the road is well constructed and ready for immediate service, in accordance with and as required by section four of the 'Act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military and other purposes,' and as it has reached that state of completeness provided for in the report of the board convened to determine on a standard for construction of the Pacific Railroad," made to Secretary Harlan, February 21, 1866, approved by him, and furnished to us as a part of our instructions, and as the company is rapidly and in good faith finishing up the incompleted work, we recommend the acceptance of the sections by the Government and the adoption of the same course toward the unfinished work as elsewhere on the Pacific Railroad.

Respectfully submitted,

(Signed) G. K. WARREN,
Brevet Maj. Gen. U. S. A.

(Signed) JAMES F. WILSON, Com.

		2,262,520 29
Leaving a balance of		$445,578 85
Add balance April 1, 1868		1,151,665 17
Total, as in Balance Sheet		$1,597,244 02

There has been expended during the year on account of construction and equipment the following:

Land and land damages	$14,666 62
Equipment	510,813 26
Engineering and contingent construction	341,377 78
Grading	1,551,997 39
Superstructure and bridging	2,030,471 77
Fencing	25,883 43
Station buildings, etc.	69,089 02
New shops Chicago, including machinery and tools	321,211 86
Construction repairs	327,297 90
Total	$1,192,809 08

The leading items of expenditure for renewal of track, during the year, have been:

170,663 ties	$89,598 07
1,271 tons New Iron Rails	108,035 00
1,706 tons Rails re-rolled	64,025 00
1,101 tons New Steel Rails	171,654 96
262,450 lbs. Spike	13,740 38
5,500 lbs. Screw Spike	502 19
246,200 lbs. Fish Bars	10,228 22
75,400 lbs. Bolts for Fish Joints	5,362 80
2,000 Pratt's Patent Fish Joints	4,234 48

During the year, 14.55 miles of track were relaid with new iron; 18 do., with re-rolled iron; 13 do., with steel. The number of rails repaired at company's shops was 21,457, costing $16,901 76—an average for each rail repaired of 78.77 cents. The amount expended for rebuilding bridges over Iowa River and Clear Creek was $32,812 99. The report says:

In the last Annual Report, you were informed that contracts had been made for the completion of your line of road to the Missouri River, there to connect with the Union Pacific Railroad; that the work would be hastened to completion as rapidly as was consistent with proper economy, and a belief expressed that the line would be opened during the year 1869.

At that time this company was laboring under great disadvantage, owing to the action of certain interested parties in Wall street, who had forced the company into litigation, not only in New York, but in Illinois. It will be remembered that in September, 1867, by a unanimous vote of the Executive Committee, the President and Mr. David Dows were appointed a Committee to sell forty-nine thousand shares of the capital stock to raise money to complete the road to the Missouri River; that, in pursuance of that appointment, they proceeded to and did sell the amount authorized, at what was believed to be a very satisfactory price, and very much better for the company than to issue and sell the additional four and half millions of bonds, which were authorized by the terms of the mortgage. Immediately upon the fact being public that such sale had taken place, that the company had provided money to complete the road, in accordance with the expressed wish of the stockholders, as shown by their assent to the articles of consolidation, that the scheme of the parties interested to prevent the construction of the road west of Des Moines was likely to fail, legal proceedings were instituted in the New York Courts against the company, and several of the individual directors.

Injunctions were allowed and enforced, the effect of which was to prevent the company from using its funds for the purpose of building the road, as contemplated, unless the company would pay to certain parties the losses which they alleged they had made by reason of the sale of the forty-nine thousand shares. New York Courts were found who readily allowed such injunctions, and the Directors were placed in an unpleasant situation. Desirous at all times to carry out the wishes and views of the stockholders, as expressed by them in the usual way, and feeling assured that the *bona fide* stockholders, who held the stock as an investment, expected and desired that the road should be completed to the Missouri River, it was determined that all proper and legal defenses to such proceedings should be interposed. Counsel were employed in New York, Illinois, and Iowa, and it should be said here that most faithfully did they severally perform the duties assigned them. In the meantime, the Legislature of Iowa being in session, it was determined to make an application to that body for the passage of a law which would enable the company to go on and build the road, despite the New York Courts, or disappointed parties. The Directors are happy to be able to say to you that, notwithstanding the most violent opposition, most improper means resorted to, and most gross misrepresentations, both the Senate and House of Representatives, by a unanimous vote, passed the bill desired.

Gov. Merrill, who had taken great interest in the matter on account of the benefits which would accrue to the State by the construction of the road, approved the bill, and it became a law. This gave the company a starting point to defeat the scheme concocted against it, and enable it to go forward at once. Upon application, in proper manner, to the Courts of the State of Illinois, the issue and sale of the forty-nine thousand shares, and the proceedings of the company in connection therewith, were by decree duly affirmed and approved. The two parent States, one by its legislative, and the other by its judicial authority, having affirmed the action of the Directors in the matter, the way was opened to complete the road, *if* the funds *tied up* in New York could be made available. These facts were shown to the New York Courts by the counsel of the company in a proper form, and thereupon all injunctions were dissolved, and the company was at last enabled to use its money for the purpose for which the stock was sold.

The work has been steadily prosecuted as rapidly as was consistent with due regard to economy in its cost, and the Directors have the pleasure of reporting to you that on the 11th day of May the last rail was laid, and the road will be opened for business on the 7th day of June, thus making an unbroken line of railway from Chicago to the Missouri River. The new road has been built in the best and most substantial manner, consistent with the materials to be obtained. There is yet much to do in way of ballasting, buildings, shops, fencing, etc., to fully complete it. The connection between the Union Pacific and the Central Pacific Railroads was made at about the same time, and your road forms a part of the great railroad line from ocean to ocean, as predicted many years since.

The unprovoked and unwarranted litigation has cost the company a large sum of money, not only in the amount actually paid out for legal expenses, etc., but in the delay in the construction, and other matters incident thereto; and while it would have been much more pleasant to the Directors to have had the money to improve and equip the property, they believed it to be their duty to carry out the views of the stockholders as expressed, by the extension and completion of the road.

The new shops have been so far completed as to be occupied for business during the past winter, and great benefits experienced by the increased facilities for repairs of both engines and cars.

In October, 1866, several tons of the "John Brown Atlas toughened Steel Rails" were placed in the track in Clark street, where they would have the most severe test, all the trains of the C., R. I. & P. and M. S. & N. I. Railoads passing over the same on single track, and where there is almost constant passing of heavy switching engines and cars. None of these rails have shown any perceptible wear after three and a half years service. The Chief Engineer estimates that the best quality of iron rails would not have lasted to exceed one year in the same situation. In November, 1867, one mile of these rails was laid in the main line between Englewood and Blue Island, none of which show any signs of failure. During the past fall and winter thirteen miles of these rails were laid in the main line from Blue Island West with like result, making fourteen miles of track laid with steel rails now in use, and contracts have been made for the delivery of five hundred tons additional, which will be laid the coming summer. The Chief Engineer is of the opinion after careful considerations based on the foregoing results, that it is true economy to adopt continued use of these rails.

A contract has been entered into between this company and the United States Government for the erection of a bridge over the Mississippi River between Rock Island and Davenport, with a view of changing the location across the island of Rock Island, to accommodate the Government works. The proportion of which this company is to pay is estimated at about $600,000, of which $300,000 will be required this year.

The bonds of the Railroad Bridge Company,

guaranteed by this company, amounting to $400,000, mature January 1, 1870, and the first mortgage bonds of the Chicago and Rock Island R.R. Co., amounting to one million three hundred and ninety-seven thousand dollars, mature July 10th, 1870, all of which must be provided for.

It is estimated by the Chief Engineer that the sum of $770,120 will be required during the present year for freight houses and track facilities to provide for the business of the company in the city of Chicago.

The extension of the road of this company to the Missouri River has added about 140 miles of new track, requiring an addition to the equipment account, and to meet this want eleven new engines have been contracted for, to be delivered 1st August next, and 100 box cars to be delivered 1st July. In addition to the above, there will be required 100 platform cars, 200 box cars, and 50 stock cars, besides the addition of passenger, baggage, and sleeping cars, which are being built at the company's shops. It is estimated that the sum of $581,000 will be required to meet this outlay.

The second track between De Pue and Bureau stations, a distance of four miles, and between Seneca and Marsailles, about the same distance, has been nearly completed.

It is proposed to build ten or fifteen miles additional double track during the present year.

Recapitulation of money required to meet the payments of the company during the next year:

Bonds of the Railroad Bridge Company, due January, 1870, and guaranteed by this company.....	$400,000 00
Bonds of the Chicago and Rock Island R. R. Co., due July, 1870..	1,397,000 09
Proportion of cost of building new bridge over Mississippi River....	300,000 00
Freight, houses and additional track in City of Chicago.....	770,120 00
New equipment.....	581,000 00
Total required during next year...	$3,448,120 00

The company have 107 engines—83 coal burners, and 24 wood burners. Twelve new engines have been purchased during the year, and 13 have been changed from wood to coal burners. The general condition of the engines is much better than the previous year. Five boilers about completed to renew wood burners.

The company own 49 coaches, 23 baggage, mail and express, 287 stock, 1,534 box, 659 flat, 8 drovers', 1 pay, and 40 dump cars. There have been purchased of this number, 124 box, 50 flat and 40 dump cars, and built at the company's shops, 7 new coaches, (6 of which supply old numbers,) and one rebuilt; 105 new box cars added, and 88 to fill old numbers; 67 new stock cars added, and 18 new to fill old numbers; 168 new flats added, and 20 new to fill old numbers. Also built 14 caboose cars, 85 hand cars, 50 rubble cars and 4 sleeping cars for construction men.

The number of miles run by locomotives with passenger trains was 607,649; with freight trains, 1,692,809; with wood and gravel trains, 214,615—total miles run, 2,515,073, at an average cost per mile run for engineers, firemen and wipers, oil, waste, fuel and repairs, of 26.94 cents. Of the mileage run, 146,454 miles were on engines employed in building the road west of Des Moines; the total mileage, less that done on new construction, is 2,368,619.

The whole amount of freight transported during the year was 1,613,575,616 lbs.—an increase over the previous year of 304,705,254 lbs. Number of loaded cars: going eastward, 51,662; do., westward, 53,877—total, 105,539. Average tonnage to each car, 7,1289. Freight carried one mile, 119,974,436.620 tons. Average earnings per ton per mile, 2.98 cents.

The number of passengers transported during the year was 627,595, of which 621,990 were first class, and 5,605 second class; of the total number, 59,798 were through, and 567,797 way; 306,391 going east, and 321,204, west. Passengers carried one mile, 31,339,650. Average rate per mile for transporting passengers, 4.124 cents.

The number of pounds of freight transported over the Mississippi Bridge during the year was 537,740,847—an increase over the previous year of 103,241,977. The number of loaded cars passed over the bridge was 35,630. Number of foot passengers, 80,027. The number of steamers, barges and rafts passing the draw was 1,752.

The new work charged to construction repairs amounted to $369,148 83; of which, $327,279 90 has been charged to construction as "Construction Repairs," and balance to ordinary repairs.

President and Gen'l Sup't.—JOHN F. TRACY.

Directors.—David Dows, Wilson G. Hunt, O. De Forest Grant, Charles R. Marvin, New York; Robt. A. Forsyth, Newburgh, N.Y.; Milton Courtright, Wm. L. Scott, John Hearn, Erie, Pa.; John F. Tracy, Henry H. Porter, Chicago, Ills.; Ebenezer Cook, George L. Davenport, Davenport, Iowa; B. F. Allen, Des Moines, Iowa.

Secretary.—EBENEZER COOK.

Ass't Treasurer.—F. D. SHERMAN.

Register, New York.—E. W. DUNHAM.

Ass't Gen'l Superintendent.—P. A. HALL.

☞ The Albany *Journal* says that the new railroad running from Glen's Falls to Fort Edward, was accepted on Wednesday by the Rensselaer and Saratoga Railroad, who took a lease of the same from the Glen's Falls Railroad for fifty years, at a nominal rent, but with agreements to maintain and operate the same during the existence of the two companies at the same rates of through fare and freight charged on the same distance of the Rensselaer and Saratoga Railroad. Local fare will not exceed six cents per mile.

How Steel-Headed Rails are Made.

The process of making the steel-headed rails for railroads, at the rolling mills, is quite interesting. The old method, almost wholly used at other manufactories of steel-headed rails, is to weld the relative thicknesses of iron and steel in one operation. The method at the rolling mill is to first weld the steel which is to form the head of the rail with a quite thin piece of iron. This is then beaten and rolled down until the iron is very thin and the steel reduced to about half its former bulk. After this operation is completed, the whole quantity of iron requisite to complete the bulk of the rail is added to the bottom of this, and welded to the thin layer of iron. This process doubles the strength of the weld between the iron and the steel, always a difficult operation to perform. The quantity of these rails now being manufactured at the rolling mills is enormous. They are chiefly used on the New York and Erie road, but some are sent to the Hartford and New Haven, Hudson River, and other roads. These rails are superior in many respects to any other made, and will no doubt, in time, supersede all others.—*Trenton Gazette.*

Schuylerville and Upper Hudson Railroad.

Articles of association were filed in the office of the Secretary of State of the State of New York, on the 30th of June, incorporating the Schuylerville and Upper Hudson Railroad Company. The capital stock is fixed at two hundred thousand dollars. The Directors named are Jesse Billings, Jr., Alvina L. Fenne, Daniel A. Bullard, Alanson Welch, Charles H. Payn, Edward Raymond, Sidney Seeley, Charles W. Mayhew, George L. Ames, Samuel Sheldon, Richard English, Lewis Goldsmith and Luther C. Briggs. The road is to be constructed from some convenient point in the village of Mechanicsville, to some point at or near Schuylerville, all in the county of Saratoga.

Utica and Mohawk Street Railroad.

Articles were filed on the 30th of June, in the office of the Secretary of State of the State of New York, incorporating the Utica and Mohawk street Railroad Company. The capital stock is fixed at two hundred and fifty thousand dollars. The directors named are Horatio Seymour, Francis Kernan, John F. Hosch, Philo Remington, John W. Bridenbecker, John J. Francis, Lorenzo M. Taylor, Thomas Richardson, Liberty L. Lowell, Albion E. Culver, Arthur B. Johnson, William Gates and John C. Devereux. The road is to run from Genesee street in the city of Utica, through and along Bleecker and other streets and through the village of Frankfort and Ilion to some point at or near the village of Mohawk, a distance of about thirteen miles.

Little Rock and Fort Smith Railroad.

The Little Rock (Ark.) *Gazette* says that the surveying party have reached a point in Pope County, about eight miles beyond the Illinois bayou. From Carrion Crow Mountain, two lines were run, one *via* Norristown and Dardanelle, on the river, and the other by Russellville. The two lines join about eight miles beyond the Illinois. It is yet to be determined which line will be adopted. The point reached by the surveying party is some miles more than half the distance to Fort Smith.

☞ The Madison *Free Press*, of June 24th, says the track of the Memphis and Little Rock Railroad has been laid to within about a mile of Forrest City, or two and a half miles west of Madison.

Journal of Railroad Law.

HORSE RAILROAD COMPANY—PASSENGERS AFTER GIVING NOTICE TO STOP MAY PREPARE TO LEAVE A CAR IN MOTION WITHOUT BEING GUILTY OF NEGLIGENCE.

The facts of the late case of Nichols *vs.* The Sixth Avenue Railroad Company (38 N. Y. 131) are fully and clearly stated in the following opinion by

MILLER, J.—At the close of the plaintiff's case, the defendant's counsel moved to dismiss the complaint on the ground that the evidence was not sufficient to justify the jury in finding that the disaster was occasioned by negligence on the part of the defendant; also, that the evidence did show that the disaster was occasioned by negligence on the part of the plaintiff; and upon the further ground, that, in any aspect of the case as then presented by the evidence, it was a case of mutual negligence, the negligence of the plaintiff concurring with that of the defendant, to produce the injury, and contributing and conducing to bring it about. The same motion was renewed at the close of the defendant's evidence, upon the same ground, and upon the additional ground that the plaintiff's case was not improved by the testimony given subsequent to the time of resting.

The principles which are applicable to this class of cases, have been frequently adjudicated, and are so well understood, that it is unnecessary to discuss them at length at this time. The negligence alleged against the plaintiff was, that he had left his seat, a place of perfect safety and security, while the car was in motion, and taken position on the step of the car, which exposed him to danger, and was the means of causing the injury. Unexplained of itself, the fact of thus voluntarily assuming a risk of this kind would seem to sanction the ground taken by the defendant, for where a passenger thus places himself in a dangerous and unusual position, and exposes himself to extraordinary hazards, the presumption would be, that he was careless and negligent, and this presumption he would be bound to rebut, in an action to recover damages for injuries sustained. The evidence of the plaintiff, however, shows that the plaintiff desired to get inside of the car, and was prohibited by the driver from doing so, and compelled to take a seat with him outside, in company with two other persons. Before arriving at the corner of Thirteenth street, he asked the driver, with whom he had rode before, and who knew where he usually left the car, to stop as he wanted to get off. At this time the horse was on a trot, and he was brought down to a walk. The plaintiff then got on to the step with both of his feet, having the papers under his arm, and with his left hand on the handle of the driver's platform. He sat next to the driver, and was obliged to pass two persons to get to the steps. He supposed that the driver was going to stop, and, while standing there waiting for the car to stop, requested him again to stop. There was a sudden start of the car, the horse going on a trot, the plaintiff was thrown from the car, struck by the wheel and seriously injured. There was no brake on the car. The facts as established by plaintiff's evidence proved that he notified the driver in due season, and that he had reason to believe that the car was going to stop. He was very near him at the time, and had a right to suppose that the driver heard him when he spoke. More especially was he justified in thus believing from the fact, that the horses were brought to a walk, and the fact that he spoke to him a second time. With these indications I think he had a right to assume that the driver intended to stop, and that he exercised the ordinary care and diligence which the occasion demanded, in preparing to get off. I am not aware of any rule which demands that a passenger on a railroad car in a city should wait and remain in his seat, after indications have thus been made manifest that the car is about to stop, without making any movement whatever to leave. He has a right to assume, from the surrounding circumstances, that a driver of a car, after having been spoken to once or twice, and after making motions to stop the car, will allow him to leave without proceeding further; and, when he acts upon such an assumption, negligence cannot fairly be imputed to him. The passenger has no right to leave the car, to jump from it while in motion, but he has a perfect and unquestionable right to prepare to leave after notice given, and particularly after he has received intimations that his notice is understood. There is no such rule of law which requires him to keep his seat, until the very moment that the car has actually stopped. The plaintiff had a right, then, to start to leave when he had spoken to the driver, and, unless he was careless and negligent in doing so, he did not lose his right to recover damages. Certainly, it is not clear that he was guilty of negligence, and there was no ground for dismissing the complaint for any such reason. The proof as to the defendant's negligence showed, that, although the speed of the car was stopped when the driver was spoken to by the plaintiff, it moved on after he had thus indicated that he intended to make a full stop, and after he had been twice requested to let the plaintiff get off. It was clearly evidence of negligence thus to proceed. The driver had compelled the plaintiff to take a seat outside of the car, and as his testimony afterwards shows, he knew that he usually left the car at this place. Apparently, after being spoken to, he paused, thus luring the plaintiff on to danger, and then allowing the car to be suddenly started and producing the catastrophe which followed. Drivers of street cars have no right to hold out inducements to persons travelling by that mode of conveyance, which may lead them into danger, and it is of no little importance to the thousands who use this means of transportation, that the rule should be settled, that they are bound to be cautious in this respect, and that the employees are liable for the failure to perform a plain duty. There was some evidence of negligence on the part of the defendant's agent in this case, and I am not prepared to say as a question of law, that there was such a failure of proof as authorized the court to take the case from the jury. The original motion to dismiss the complaint was, therefore, properly denied, as none of the grounds taken are maintainable.

The defendant introduced evidence contradicting the plaintiff's testimony as to the main facts, and tending to establish that the plaintiff was in fault. The driver denies that he heard the plaintiff ask him to stop, and it is claimed that the plaintiff attempted to get off. He had no right to leave the car while in motion, and had he done so, the defendant would not have been liable. Whether such was the fact, and which version of the transaction was the true one, was a question of fact for the jury. It is by no means manifest from the defendant's testimony, that the plaintiff was negligent, or the defendant entirely free from it. It only created a conflict in the testimony, which it was eminently proper to submit to the determination of the jury.

It is said that the judge erred in refusing to charge that it was negligence on the part of the plaintiff to attempt to get off the car while in motion, and that the plaintiff was not entitled to recover.

This request of the defendant's counsel assumes that the plaintiff entirely failed to make out a case, and presents the same point which I have discussed in reference to the motion to dismiss the complaint, and the views I have expressed are applicable here. It was clearly a case where the facts, or inferences to be drawn from them, were in some degree doubtful, and the only proper rule under such circumstances is to submit the whole matter to the jury with proper instructions, as is manifest was done by the judge in his charge. He left it for the jury to determine whether the plaintiff was negligent, and no exception was taken to his charge in this particular.

The request to charge, that the plaintiff was negligent in placing himself upon the steps while the car was in motion, comes within the rule last stated, and is covered by the remarks already made. The judge's charge also covered the request to charge, that a passenger had a right to retain his seat until the car stops, and the refusal or neglect of the driver to stop the car when requested does not justify the passenger in attempting to leave the car while in motion, and that, if he makes such attempt, he does it at his own risk, and is guilty of negligence, and cannot recover. The whole question of negligence was submitted to the jury, and I think embraced this proposition. The mere preparation to leave a car while in motion is not of itself negligence, as I think I have shown, if there are indications of its stopping, and the abstract proposition presented by this request would compel a passenger to remain quiet in his seat until there was an entire stop, which I do not think the law demands. Such a rule would require unusual delays in the transportation of passengers by means of city railroad cars, and I think is not necessary in the exercise of a proper degree of care and caution. While passengers have no right to jump off a car while in motion, or to make an attempt to do so, yet, they are authorized to prepare to leave when there is evidence of an intention to stop or any signal given for such a purpose.

The request to charge, that the absence of a brake was immaterial, and did not constitute negligence, was also properly refused, because it was substantially covered by the charge made. The judge charged in substance, that, if the fact was, according to the driver's theory, that he heard no request of the boy to get off, and had no idea of his attempting to do so, then no injury could have resulted from the absence of a brake; while, if it were otherwise, we might suppose the brake would serve to prevent the start, or prevent any jar that would throw the boy, and, under such a state of circumstances, it would be unimportant whether there was or was not a brake, this I think was all

that the case required, and was a proper presentation of the subject, and no exception was taken to this part of the charge.

I have examined the other exceptions to the refusal to charge, and have arrived at the conclusion, that they are not well taken, and demand no discussion. The judgment appealed from should be affirmed.

Judgment affirmed.

Imports of Dry Goods.

The imports of foreign dry goods at New York for the month of June, were:

☞ The Brunswick end of the Macon and Brunswick Railway, Georgia, was completed on the 2d instant, and the entire road, one hundred and ninety miles long, will be open in time to transport the fall cotton crop. By this road there is direct communication between the interior of the State of Georgia and the seaboard.

The Costa Rica Railroad--Grant To New York Parties.

Some time since we published the basis of a contract between the government of Costa Rica and a company of Americans for the construction of a railroad from Limon, on the Atlantic, to the Gulf of Fonseca, on the Pacific. The contract was recently confirmed by Congress, after a good deal of difficulty and in a modified form, and the agent and engineers who were at work in securing it and making surveys of the route, are now on their way to New York with the contract, the plans, maps, &c., in their pocket. The main points of the contract are as follows:—The capital stock is to be $10,000,000, and the headquarters of the company to be in New York, Philadelphia or Boston. The government of Costa Rica issues to the company bonds of the Republic to the amount of $60,000 per geographical mile, payable in United States gold in the city of New York at the expiration of forty years, and bearing interest at the rate of eight per cent. per annum, payable semi-annually in New York. The delivery of these bonds constitutes a mortgage in favor of Costa Rica, and the nett earnings of the road go to that government in re-payment of the interest on the bonds, after deducting a dividend of six per cent. on the capital stock. The government also makes an allowance for harbor improvements, liberates the company from any responsibility for private property taken in the construction of the road, agrees that foreign mails and the company's correspondence need not pass through the post office, stipulates not to interfere in the management of the company's business, and has in every respect made most liberal concessions.

The road will run near the capital, San Jose, passing through the principal coffee districts; it will be about one hundred and forty miles in length from ocean to ocean.

The names of the incorporators are Edward Reilly, Alexander Hay, William H. McCartney and David Vickers.

Port Lemon was surveyed some time ago by the officers of the United States Coast Survey, and were recently by Captain Barrett, of the Royal West India Mail Company's service, and General Spaulding, engineer-in-chief of the road. These reports show the harbor to be a good and safe one, and though small, capable of great enlargement. It has deep water close to the shore, sufficient for large steamers, and is well protected.

Engineering operations have been in progress along the contemplated route for two months past.

The government of Costa Rica seems to be using every exertion to divert the trade from the Pacific to the Atlantic, and is now constructing a cart road from the capital to the Pacuare River within about 30 miles of Limon. An able European engineer has charge of the work on which 250 men are constantly employed. The great object of this road is to enable coffee planters to get their produce to the European markets from an Atlantic port instead of the present roundabout way of taking it to Punta Arenas and thence to the Atlantic by the way of the Isthmus, which it is calculated would effect a saving of some two cents per pound in transportation, and avoid considerable delay. The railroad undertaking is one of considerable magnitude, and if successfully carried out will no doubt prove of the greatest importance to the people of Costa Rica.—*Panama Star, June 23d.*

☞ A dividend of 4 per cent. free of Government tax, will be paid upon the capital stock of of the Lake Shore and Michigan Southern Railway Co., including the capital stock of the late Cleveland, Painesville and Ashtabula, the Cleveland and Toledo, and the Lake Shore Railroad Companies, and the common stock of the late Michigan Southern and Northern Indiana Railroad Company, to the shareholders respectively, at the office of the Company 18 William st., N. Y., on the 2d day of August next.

American Railroad Journal.

Saturday, July 10, 1869.

Stock Exchange and Money Market.

Though there has been probably less urgent need of pecuniary aid felt by the speculative borrowers, through the past week, the demand has been sufficiently brisk, especially from the stock firms, to have enabled lenders to realize exceptionally high rates for temporary accommodation, the extremes on Stock collaterals having been from 7 per cent. currency per annum in rare instances to the legal rate per annum with the addition of as much as ⅛ of one per cent. per day of a commission, for the use of money from day to day. The bulk of the speculative dealings were based on the legal rate per annum with the addition of an ⅛th to ¼ of one per cent. per day, for carrying Railway and Miscellaneous share property, against which the pressure operated quite severely, particularly toward the close of the week under review. The banks were less liberal of help, having further reduced their loans and discounts about two millions, while they reported a loss of nearly the same amount of deposits, and nearly 1½ millions of legal tenders, of which latter they now hold a reserve of only 46¾ millions against about 57⅞ millions on the 22d of May 1869; and 72⅛ millions this date in 1868. They added about 3¼ millions of specie to their hoard, in this form, and now control a specie reserve of about 23½ millions, against 15⅜ millions on the 15th of May 1869, and less than 12 millions on July 3, 1868. The U. S. Sub Treasury, last week, reduced its cash balances nearly 7¾ millions, but had them augmented on Tuesday, of the current week, fully 18¼ millions chiefly by transfers of public money, from other depositories to the Government office here. Its coin and currency reserve on the 6th inst. stood at 98¼ millions against 82⅝ millions the preceding Tuesday. The National Depository Banks held on the 1st inst., according to the reports at that date, about $8,500,000 of the currency balance of $37,000,000 then in the Treasury. But as the receipts during the last three days of June were very large, and as the reports are not yet all in, it is estimated that there was actually $3,000,000 more on deposit with the banks than when the debt statement was made out, so that the actual currency balance in the Treasury on the 1st of July was not less than $40,000,000, though, according to public debt statement of the 1st inst., it was but $37,097,819. The coin balance in the Treasury control on the 1st inst. was $110,203,313, of which the New York office held about five-sixths. The discount market has been very quiet most of the week. Choice grades of commercial paper are quoted at 9@10 per cent. per annum. Among the Government houses, the prevalent quotation for temporary loans was 7 per cent. per annum, currency, but the great dealers were not free borrowers, and comparatively but little business was reported on this basis.

The specie reserve of the city banks according to the latest return is $23,520,267, against $11,954,731 same time last year. The city bank deposits are now $179,929,467, against $221,050,806 week ending July 3, 1868. The legal tender reserve amounts to $46,737,263, against $72,125,939 same time last year. The circulation now stands at $34,217,973, against $34 023,466 same time last year. The loans are now $258,368,471, against $281,945 931 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $141,127,266 a day, against a daily average of $127,028,457 the preceding week, and $139,370,671 the week ending with June 16, 1869. The current week's exchanges average about $141,000,000 a day. The city banks, last week, reported a gain of $3,268,127 of specie, with a further loss of $1,845,228 of deposits, and $1,426,657 of legal tender notes. They reduced their loans, $2,063,261; and increased their circulation, $3,188.

The city bank exchanges on Wednesday were $121,288,303, and the resulting balances, $3,857,467.

National Bank notes to the amount of $120,410 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $316,264,538, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $16,511,933, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,749,605. The United States bonds held by Treasurer Spinner in trust for National Banks as

security for circulating notes amount to $342,918,600; and for the public deposits, $24,907,350—making a total of $367,825,950. The Treasury Department last week redeemed and destroyed $305,380 of worn and mutilated fractional currency, and issued $183,990 of new. The outstanding amount of fractional currency on the 1st of July, was $32,062,528 against $33,452,523 on June 1; $35,330,323, on May 1, $36,719,912 on the 1st of April, $36,781,548 on March 1, $35,511,127 on February 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending with July 3, were $14,356,868, including $1,646,558 from customs duties; payments, $22,119,483, including $7,213,816 of coin interest; balance at the close of the week, $80,046,494, against $87,809,169 at the close of the preceding week, showing a decrease of $7,762,615. The business of the Office on the first business day of the current week, was as follows: On Tuesday, receipts $19,458,739, including $365,484 from customs, and payments $1,274,234, including $806,213 of coin interest. The balance at the close of business on Tuesday stood at $98,230,998, against $82,668,328 a week previous; and $86,029,923 on June 23, 1869. The aggregate receipts of the office in June were $55,052,216, including $8,847,210 from customs, aggregate payments, $47,347,878, including $3,131,675 of coin interest.

The outstanding amount of coin certificates on the 1st of July was $30,489,640 against $23,540,720 on June 1st; $16,307,200 on May 1st; $21,672,500, April 1, $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $6,084,000, and retired $1,567,558 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during June, reached $13,593,420.

A more liberal income has been derived from excises since our last, while the customs have been less prolific. The excises, last week, yielded about 8¼ millions; customs at the port of New York, $1,646,558, and at the outports about $617,000 (in coin) more, making the grand total income for the week equal to about $11,225,352 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, during the fiscal year, ending with June 30, 1869, were $158,287,177. The customs yielded, same time, about 182 millions in gold. The miscellaneous revenues of the fiscal year yielded about thirty millions, making a grand total income for the year ending with June 30, 1869 of about 370 millions. With such liberal revenues available, we are not surprised to find, from a comparative analysis of the debt as it now stands, with the schedule of June 30, 1868, both embracing the accrued interest, a reduction of $42,452,524 in the National obligations for the fiscal year just closed. The whole reduction of the direct Public Debt of the United States for the four years since the War, or since the 31st August, 1865, when the Debt attained its maximum, is shown to be $314,854,401. And even if the bonds bearing currency interest, since loaned to the Pacific Roads be taken into the account, the net reduction of all debt, direct and contingent upon the solvency of the Pacific Roads, is $257,474,081. The net reduction of the debt in June 1869, was $16,410,232, after allowing for the difference in the accrued interest to the close of the month.

The Government revenue from excises on Tuesday reached $1,715,000.

Gold has been much more freely offered, partly on speculative account, and has declined sharply, depressed in part, by the adverse influence of the Monetary activity. The extremes of the week have been 134 and 137¾, and the closing quotation on Wednesday was 135⅝. The coin-interest disbursements have been on a liberal scale, having exceeded 8½ millions; while the customs and export inquiry has been comparatively moderate. On Tuesday of this week, $17,099 were exported, and on Wednesday $64,000.

The following is the statement of the New York Gold Exchange Bank for the week ending Saturday, the 3d day of July, 1869:

Average am't of loans and discounts....	$1,794,317
Average amount of specie....	1,192,446
Average amount of deposits....	2,227,419

The customs of the port on Wednesday yielded $381,000. The U. S. Sub-Treasury disbursed $684,400 of coin interest, on that day.

The customs demand for Gold last week, averaged $274,426 a day; thus far, this week, it has averaged $365,484 a day, or equal to a weekly aggregate of $2,192,904. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $690,538, and since Jan. 1, $9,594,678, against $3,951,234 same time in 1868. The receipts from California, since our last, have been none. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to June 30, 1869 was $124,688,174, against $113,529,891 in the preceding fiscal year. At San Francisco, from Jan. 1, to June 25th, 1869, $3,391,393, against $3,699,865 same time last year.

The total receipts of California gold at this port, during the fiscal year ending with June 30, 1869, were $19,419,278, against $36,726,790 in fiscal year 1867–'68, showing a decrease in the last fiscal year, of $17,307,512. The exports of specie, from this port, last week, were $852,957, against $3,227,532 same week last year; total, year ending July 1, 1869, $37,279,653, against $76,309,866 during the year 1867–'68. Government disbursed last week through the U. S. Sub Treasury here, on account of the coin interest on the public debt $7,213,816; year ending July 1, 1869, $88,325,756, against $73,485,386 during the preceding fiscal year of 1867–'68. The specie exports from San Francisco, from Jan. 1, to June 25, 1869, were $18,423,308, against $18,939,431 same time in 1868.

A somewhat firmer market has been noted for foreign exchange, but without much activity. Bankers' prime sixty day bills on London closed tamely on Wednesday at 109⅝@110, and on Paris to 5.20@5.14½; sight bills on London to 110⅛@110⅜, and on Paris to 5.13¾c.@5.12½. The offering of produce bills has been quite heavy this week, but the stringency in Money has checked their sale. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $4,431,637, against $2,452,598 same week last year; total, since July 1, 1868, $172,815,331, against $179,085,149 same time in preceding fiscal year of 1867–'68.

On Saturday June, 3d, the U. S. Assistant Treasurer at this port purchased $3,000,000 of United States 5-20s, viz: 1867s, $2,621,000; 1868s, $265,000; 1864s, $40,000; 1862s, $74,000; at prices varying from 116.08 to 116.65.

Government securities have been in moderate demand, most of the week, at variable prices. The stringency in Money, and the depression in Gold have operated against active dealings, and have tended to depress values, though the debt exhibit of July 1, favored the interests of holders.

The net liquidation of the past fiscal year is shown to have been fully $42,452,524. The coin bearing portion of the debt is now $2,107,930,600, of which the Five Twenty bonds constitute $1,602,663,800, the six per cents of 1881, $283,677,500, and the Ten Forties, $194,567,300. The currency bearing debt is now down to $66,120,000; and the non-interest bearing debt is $423,672,383.

The six per cents of 1881, and the later Five Twenties are now quoted ex the 1st of July interest.

The later dealings in the Public Funds on Wednesday showed rather more firmness.

U. S. sixes of 1881 closed here on Wednesday at 116¾@117⅛; U. S. Five-twenties of 1862, ex-coupon, 121⅜@121⅝; U.S. Five-twenties of 1864 at 117½@117⅝; U. S. Five-twenties of 1865 at 117½@117⅝; U. S. Five-twenties of 1865, consolidated, 116¼@116⅜; U. S. Five-twenties of 1867, 116¼@116⅜; U. S. Five-twenties of 1868, 116¼@116⅜; U. S. Ten-forties at 107¾@108; U. S. Six per cent. currency bonds, 105⅞@106⅛.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	June 23.	June 30.	July 7.
Consols	93@93⅛	92⅞@93	93⅛
U. S. 5-20's of 1862...	80¾	80¾	81⅝
Erie	20¾	19½	19½
Ill. Central	95	95	95½

Railway and miscellaneous stocks have been active, excited and unusually changeable in value, nearly all through the week. Early on Wednesday the market was greatly depressed, by the very extensive offerings, chiefly on speculation, growing out of the pecuniary necessities and embarrassments of holders, in the face of the continued stringency in the call loan line. Later in the day, the dealings indicated a more confident temper and prices rallied, though rather fitfully.

Business has been partly active in Breadstuffs and Cotton, which closed with considerable buoyancy. Other articles of domestic produce have been rather quiet, and irregular in prices. Middling upland cotton closed firmly on Wednesday at 34½ cts. per lb. The stock of cotton now here is estimated at about 20,500 bales. The receipts at the port this week, have averaged about 860 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,294,000 bales, against 2,321,000 bales same time in 1867–8; exports, same time 1,416,500 bales, against 1,692,500 bales same time in 1867–'8; stock on hand at latest dates, 65,000 bales, against 91,500 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 14,828 pkgs., against 12,050 pkgs., same time last year. From Boston, 4,373 pkgs., against 6,162 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in fair demand, at from 13@16¼c., per lb.; week's receipts, 6,532. Milch cows, dull at from $40@$110 each, receipts, 113. Veal calves in request at from 6@10½c. per lb.; receipts, 3,670. Sheep and lambs brisker and firmer at from 4@7c., and 9@11½c. per lb.,; receipts, 20,373. Swine in moderate demand at from 9@9⅝c. per lb.; receipts, 24.214.

Foreign goods have been less sought after, and weaker in price, as a rule. The total imports of foreign dry goods, last week, were $1,162,777, and the total amount marketed $1,028,116. The value of foreign merchandise imported last week, was $3,679,682—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $4,842,459, against $3,850,662 same week last year; total year ending July 1, 1869, $285,447,842, against $237,712,435 during the preceding year of 1867-'8.

Ocean freights have been moderately active and quoted firmer. For Liverpool we quote flour at 2s. 1½d.@2s 3d. by sail, and 2s. 5d.@2s. 9d. by steamer, per bbl.; grain at 8d. by sail, and 9d. by steamer, per bushel; cotton at $\frac{5}{32}$@$\frac{3}{16}$d by sail, and ¼@$\frac{5}{16}$d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 25s.@40s. by steamer, per ton. Total number of vessels in port on Wednesday, 532.

The New York exports, exclusive of specie, for the week ending July 6, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week.....	$2,452.598	$4,431,637
Prev. reported.....	86,188,797	87,597,889
Since January 1..... ..	$88,641,395	$92,029,526

The imports for the week ending July 3, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$890,851	$1,162.777
Gen. merchandise..... ..	2,959,811	3,679,682
Total for the week.....	$3,850,662	$4.842,459
Previously reported....	120,745,937	157,524,519
Since January 1.....	$124,596,599	$162,366,978

The balance in the Sub-Treasury on Wednesday was $97,830,419 59.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Louisiana 6s, Levee bonds, 67½; do., 8s, Levee bonds, 84; Alabama 5s, 63½; do., 8s, 92; N. Y. State 7s, Bounty Loan, coupon, 108¼; do., reg., 108¼; California 7s, 128; Brooklyn 6s, W. L., 92½; Norwich and Worcester R. R., 104¾; Dubuque and Sioux City R.R., 103; Toledo, Wabash and Western consol. bonds, 83; Central Pacific 6s, gold, 97½; Great Western (Ills.) 1st mort. 1888, 87½; Western Union Telegraph, 37¾; Boston Water Power Co., 15½; Adams' Exp. Co., 59¼; Wells-Fargo Exp., 26¾; Am. Mer. Union Exp., 40½; U. S. Exp., 69½; Consolidated Gregory gold, 1.60; Grass Valley gold, 0.55; Quartz Hill Gold, 0.90; Smith and Parmalee gold, 1.90.

Philadelphia.—Oil Creek and Allegheny River R. R., 42; Ph., Wil. and Balt. R. R., 52; Elmira and Williamsport 5s, 60; Lehigh Nav. conv. Boston, Clinton and Fitchburg Railroad.

At a meeting of the Boards of Directors of the Fitchburg and Worcester, and Boston, Clinton and Fitchburg Railroads, held in this town on the 18th day of June, it was decided to consolidate the two roads according to the provisions of the act of the Legislature of 1863, authorizing such consolidation subject to the ratification of the stockholders of the two corporations. At a special meeting of the stockholders held on Monday last, June 28, the action of their Boards of Directors was ratified by the following vote of the stockholders: Fitchburg and Worcester, for consolidation 1294—against 4; Boston, Clinton and Fitchburg, for consolidation 3233—against 703, being a majority of 3820 in favor of the consolidation, which goes into effect to-day. The new corporation will take the name of the Boston, Clinton and Fitchburg Railroad.—*Fitchburg Reveille, July* 1.

Boston, Barre and Gardner Railroad.

The Boston *Journal* says that there is now a prospect of the speedy construction of this road, which has been chartered for many years. The proposed route is from Worcester through Holden, West Boylston, Sterling, Princeton and Westminster, to the Vermont and Massachusetts Railroad at Gardner. Those who are familiar with the details of the plan express confidence in the success of the enterprise.

☞ The Frederick and Pennsylvania Line Railroad Company has issued $20,000 worth of coupon corporation bonds in sums of $200, $500 and $1000, bearing interest at the rate of 6 per cent. per annum in currency, payable on the 1st of June and December. The company has endorsed these bonds with a gold bearing interest—or its equivalent—of 6 per cent., and they are exempt from corporation and county tax.

☞ Negotiations have been in progress for some time for the purchase of the Southwestern Railroad and branches by the Central Railroad and Banking Company of Georgia. The Savannah *Republican* says that the bargain and transfer have been perfected, the entire interests of the Southwestern road having passed into the possession of the Central Company on the 24th ult.

☞ About two fifths of the route of the Knox and Lincoln Railroad is graded. This road will be one of the most expensive in the State. The cost, per mile, will not be far from $25,000.

☞ Ground was broken at the Debec Station of the New Brunswick and Canada Railroad on the 17th ult., for the Houlton Branch Railroad, Henry Osborn, Esq., is the contractor.

☞ Samuel Sloan has been elected President, and Percy R. Pyne, Vice President of the Morris and Essex Railroad.

☞ The Hanover Branch, Mass., Railroad earned last year (the first of its operation) $10,018 91 above expenses.

The North-West.

BY REV. ÆN. M'D. DAWSON, OTTAWA.

The "North-West territory" is that portion of British North America which is situated between Lake Superior to the east, the Pacific Ocean and the Russian Dominions (now a portion of the United States) to the west. The 49th parallel of north latitude, and the chain of waters from Rainy Lake to the confluence of Pigeon River with Lake Superior form the boundary between this territory and the United States on the south. To the north, with the exception of some portions of Alaska (lately Russian America) it has no other limits than those of the globe itself—the ice, the snow, the perpetually frozen seas and lands of the polar region.

THE PRINCIPAL RIVERS.

North Western America is watered by numerous rivers, the greater of which only need here to be named. The Columbia, rising in the Rocky Mountains, traverses the Blue Mountains and the Cascade Mountain chains. It then, after many windings, sometimes in a southerly, sometimes in a westerly direction, loses itself in the Pacific Ocean at Astoria, three degrees south of the boundary line. The treaty which deprived Great Britain of the better part of the Columbia left to her the right of navigating the noble river in common with the citizens of the United States. The Fraser River also has its source in the Rocky Mountains. After a circuitous course through the Blue Mountains, the Cascade Mountains, and the intervening plains and valleys, it joins the sea at the strait or sound which separates Vancouver Island from the continent of America. This river is celebrated for its sands of gold. Even as to California and Australia, thousands of adventurers have already been attracted to its banks; and their enterprise has been crowned with success unsurpassed as yet in the annals of gold digging.

Of Pelly River there need be little mention, as it half belongs to a foreign power. It is quite possible, however, that arrangements might be made with that power (the United States) for navigating this great river to its junction with the sea.

The Mackenzie River is wholly within British territory. It is one of the greatest rivers in the world, its course being 2,500 miles from its source in the Rocky Mountains to its debouch in the Arctic Ocean. It is navigable for about 1,200 miles, thus affording easy access in the summer months from the Arctic Sea and from the Northern Pacific by Behring's Straits to the interior of the North West territory. It flows through a fertile and finely wooded country, skirted by metalliferous hills. According to the best computation it drains an area of 443,000 geographical square miles.

The Elk and Peace Rivers, although great and beautiful streams, are only tributaries of the Mackenzie.

The Coppermine and the Great Fish River also discharge their waters into the Arctic Ocean. The former abounds in copper ore and galena. On the banks of the latter it is credibly said that there is excellent grazing. Next comes the Churchill River, which flows from the interior of the country, across the Granite belt to Hudson's Bay.

The Saskatchewan, with its two branches rising in the Rocky Mountains, drains an area of 363,000 square miles. The Red River and the Assiniboine, flowing from the heights near the sources of the Missouri and the Mississippi, add immensely to the waters of Lake Winnipeg and thence find their way by the Nelson River to Hudson's Bay.

GENERAL DESCRIPTION.

There is admirable unity in the geological appearances of this vast territory. By nature it has been made one land, however much it may be divided by the policy of man. The great chain of the Rocky Mountains extends from its southern to its northerly boundary, rising at its highest elevation to the height of sixteen thousand feet above the level of the ocean. Parallel with these, to the west, rise the Blue and Cascade Mountains, as if intended for a vanguard towards the waves of the Pacific. From the base of the Rocky Mountains eastward the country is a gently sloping plain for 800 or 900 miles, to the commencement of the great crystalline belt, which, taking a northwesterly direction about the head of Lake Superior, continues in this course and almost parallel with the Rocky Mountains as far as fifteen hundred miles, and with only a slight elevation above the neighboring plain, until reaching the Coppermine River, near the Artic Ocean, it forms hills eight hundred feet in height. Its average breadth is two hundred miles. On the side that looks towards Hudson's Bay, its outline is pretty much the same as that of the shores of this sea, thus verifying what geologists say as to the waters of this region having been confined within their actual limits by the upheaving of these primary formations. Between this belt or plateau and the Bay there is a narrow strip of limestone. From this bed of limestone to the sea the land is low, flat, swampy, and in part alluvial.

LAKES.

On the western edge of the great crystalline plateau are situated the principal lakes of the north western continent—Winnipeg, two hundred and thirty miles in length and forty miles broad; Arthabaska, Great Slave Lake, and the largest of them all, Great Bear Lake, which is intersected towards its north western extremity by the Artic Circle.

To the west of this great chain of waters the country is all habitable, and in a northerly direction as far as the sixty-fifth degree of north latitude. If, indeed, the Mackenzie River should ever be what nature has adapted it for being, the principal channel through which a great portion of the trade of the western world must flow, there may one day be a dense population even so far north as the junction of its waters with the Arctic Ocean.

COUNTRY WEST OF THE CRISTALLINE BELT, ASSINIBOIA, &C.

The portion of the country that may be first considered is the extensive region bordering on Lakes Winnipeg, Manitoba, and Winnipigoos. Its principal rivers are the Assiniboine, which is all within British territory, and the Red River, which only becomes British at Pembina, a small town on the frontier of the United States. The authorities that can be most relied on speak highly of the climate, the soil, and the beauty of this region. It has been officially reported by the Canadian Exploring Expedition of 1857 that "the summer temperature is nearly four degrees warmer than at Toronto, as ascertained by comparison of corresponding observations." Summer begins earlier and with more regularity than in Canada. We are not surprised, therefore, to learn that "the melon grows with the utmost luxuriance, without any artificial aid, and ripens perfectly before the end of August." (Expedition, '57). Wheat crops have often been known to give a return of 50 bushels to the acre, and farms have been proved to be capable of yielding for eighteen successive years without any diminution of their produce. All kinds of garden vegetables as well as oats, barley, Indian corn, hops, flax, hemp, potatoes, and other root crops are easily raised. "The potatoes, cauliflowers, and onions I have not seen surpassed," says Professor Hind, "at any of our provincial fairs."

The character of the soil cannot be exceeded. It is a rich black mould, from ten to twenty inches deep, reposing on a lightish-colored alluvial clay, about four feet deep, which again rests upon lacustrine or drift clay to the level of the water in all the rivers and creeks inspected by the expedition of 1857 and 1858.

It is far from being true, as has been stated, that there is only some arable or cultivable land along the course of the great rivers. "I frequently examined the soil," writes Professor Hind in his official report, "some miles distant from the rivers along my line of route, and I invariably found the prairie country to exhibit a uniform fertility." This rich and beautiful region, which has been described by some travelers as an unbroken level, watered by numerous tributary streams and abounding in elm, oak, ash, maple, and all the varieties of trees known in Canada, is no less than one million five hundred acres in extent. Recent observations also prove that this "paradise of fertility," as it has been called by one of the settlers, is not more than 600 feet above the level of the ocean.

Passing to the west of the valleys of the Assiniboine and Red Rivers, we find a country no less fertile, and even more beautiful, as it possesses the pleasing variety of hill and dale. It is watered by an infinite number of lesser streams, the principal of which are the Swan River and the highest tributaries of the Assiniboine. Teis interesting region was likewise visited by the exploring expedition sent by the Government of Canada in 1857–8. In Mr. S. J. Dawson's official report of this expedition published by order of the Canadian House of Assembly, this extensive portion of the North West territory is described as being eminently adapted for the purposes of agriculture and colonisation. Possessing a milder climate than the more elevated lands to the south of the United States boundary line, all the varieties of cereal crops can be produced without difficulty or risk of failure. Accrrding to this gentleman's description, the whole country has more the appearance of a fine park, beautifully varied with with lawns, woods, gardens, shrubberies, lakes, and streams, than an unreclaimed tract of unbroken wilderness. If the late Governor Simpson, had passed through this country, it would undoubtedly have inspired one of his most eloquent and glowing pictures of woodland, lake, and river scenery.

THE SASKATCHEWAN COUNTRY.

This extensive territory stretches from the borders of the granite plateau already alluded to, and from which it is separated by a chain of waters, consisting of Cedar Lake, a portion of the River Saskatchewan, Fine Island Lake, and Beaver Lake, for a distance of 800 or 900 miles westward to the Rocky Mountains. It is divided into numerous plains and valleys by the River Saskatchewan, its two great branches, and its numerous tributaries, which, rising for the most part in the vast mountain range, rush down the innumerable vales and glens on its eastern slope, giving life, beauty, and fertility to a region which would otherwise be a rugged and forbidding wilderness.

The travellers who have visited this region bear ample witness to the fertility of the soil. The scenery they describe as "magnificent," and the banks of the river on either side as luxuriant beyond description. "Vast forests,"

says Lieutenant Saxon, "cover the hill-tops and fill the valleys. The climate is mild and cattle keep fat in winter as well as in summer on the nutritious grasses."

Sir George Simpson, who had been for thirty years Governor of the Hudson's Bay Company, in his very beautiful and interesting book ("Voyage Round the World,") informs us that "the rankness of the vegetation between the forks of the Saskatchewan savored rather of the torrid zone, with its perennial spring, than of the northern wilds." He speaks of himself and his fellow travelers as "brushing the luxuriant grass with our knees, and the hard ground of the surface was beautifully diversified with a variety of flowers, such as the rose, the hyacinth, and the tiger lily."

"Towards the foot of the Rocky Mountains," says the same impartial writer, "lies a country capable of being rendered the happy home of millions of inhabitants when facilities of communication shall be offered which can lead to it."

Dr. King, in his evidence before the select committee of the House of Commons, 1857, gives a very interesting account of a colony which was endeavoring to establish itself near Cumberland House, between Fine Island Lake and the River Saskatchewan. This colony occupied and had in a high state of cultivation some fifteen hundred acres, on which they raised excellent wheat. When asked by Mr Christy whether the cultivation was successful, Dr. King replied, "Quite successful; the wheat was looking very luxuriant." Were there any other kinds of crops? "There were potatoes and barley, also pigs, cows and horses." In this small settlement each man had his own particular allotment, and everything, according to the evidence of Dr. King, was in the most flourishing condition. The learned witness, however, further states—"When I was going away they said:—'Cannot you help us? You are a Government officer; the company have ordered us to quit, and we shall be ruined.'" Of course agriculture and colonization were not the objects of the company; and, *la raison du plus fort est toujours la meilleure.* What became of this interesting little colony deponent said not. The day may not, perhaps, be far distant when colonization will be undertaken on a greater scale and under more fostering auspices.

But it has been stated that owing to periodical inundations which, every spring, lay the whole country under water, for nearly 200 miles from the junction of the River Saskatchewan with the lakes, cultivation—the raising of crops—settlement are impossible. This objection, if, indeed, it be a serious one, applies only to a very limited section of the country. And could no means be discovered by which these inundations might be prevented or at least regulated and rendered advantageous? There are falls of great magnitude near the point where the Saskatchewan joins Lake Winnipeg; and, although the people at Red River do not think that by removing a certain mill pond in their country an immense swamp which it dams up would be drained, it is nevertheless beyond question that if the wants of man required it, the annual floods of the Saskatchewan might be made to find their way into Lake Winnipeg without first inundating the country. But in a region where it rains so little, the precipitation being in the course of the year only fifteen inches, it might tend more to the raising of abundant crops to regulate and even extend the rush of the spring tide waters. To what does Egypt owe the fertility of its plains, if not to the Nile's inundations? The whole valley through which the great river flows was wont to be overflowed, and often to excess; yet who ever heard of a famine on the banks of the Nile or that Egypt was incapable of being, when occasion required, the granary of the world? In order that no inconvenience might arise from excessive inundations, great and stupendous works were erected by the generosity of the king of Egypt and the ingenuity of her people. Thus were the superfluous waters disposed of and regulated so as to increase to an amazing extent the fertility of the land. Who knows but, when people if not princes have been multiplied on the earth, similar works may be undertaken in the hitherto neglected regions of the North West?—and who dare say that the vast countries there, which have known no sound as yet save the lowing of wild cattle and the war-whoops of the fierce red man, shall not rejoice one day in all the blessings of civilization and become vocal with the glad accents of millions upon millions of happy beings?

SOIL AND CLIMATE OF THE REGIONS WATERED BY THE MACKENZIE RIVER AND ITS TRIBUTARIES, THE ELK, AND PEACE RIVERS.

The valleys of the Elk and Peace Rivers, tributaries of the Mackenzie, although much further north than the countries on the Saskatchewan, being situated between the 55th and 58th degrees of north latitude, enjoy a climate and soil adapted to the growth of all the cereals and all kinds of garden vegetables. Wheat, even, can be raised easily in these valleys, for it grows at Fort Laird, in 60 degs. north lat., on Mountain River, another tributary of the Mackenzie. Although we have no positive evidence before us which decidedly proves that wheat crops may be relied on at Peace River, there is surely ground for believing that, where the spring is so early, grain, which even cold Siberia refuses not to the labor of man, might be successfully cultivated. Sir Alexander Mackenzie, in his journal, of date May 10, 1793, says that "already the buffaloes were seen with their young ones frisking about them." At this time also (10th May,) "the whole country," he writes, "displayed an exuberant verdure. The trees that bear a blossom were advancing fast to that delightful appearance; and the velvet rind of the branches, reflecting the oblique rays of a rising and a setting sun, added a splendid gaiety to the trees which no expressions of mine are qualified to describe."

Between the two rivers—the Elk and the Peace—55—56 N. latitude, "the ground rises to a considerable height, and stretches inwards to a great distance. At every interval or pause in the rise there is a very gently ascending space or lawn, which is alternate with abrupt precipices to the summit of the whole, or at least as far as the eye could distinguish. This magnificent theatre of nature has all the decorations which the trees and animals of the country can afford it. Groves of poplar, in every shape, vary the scene, and their intervals are enlivened with vast herds of elks and buffaloes—the former choosing the steep uplands and the latter preferring the plains.—*Sir Alex. Mackenzie's Journal*, 1793.

EXTREME LIMITS OF CULTIVATION.

At Fort Norman, within a few miles of the 65th parallel of north latitude, barley and potatoes have been raised, although probably wheat could not be cultivated. It is well known, however, that in Europe it grows to perfection as far as latitude 59.

But neither wheat crops nor cereals of any kind are destined to form the resources and the wealth of this portion of the country. The navigation of the Mackenzie will be its treasure. And surely if the enterprising citizens of the United States find it profitable to convey from the seas which receive the waters of this great river shiploads of whale oil and other merchandise, it will be still more so for the future inhabitants of the flowery regions of the Saskatchewan, the Assiniboine, and the Red River to derive like supplies from the Arctic Ocean by means of the Mackenzie, which is navigable during the summer months for more than twelve hundred miles, thus affording access to the very heart of the land, whence, in all directions, there are lakes and rivers capable of bearing on their waters the most richly laden merchant ships. Seven millions of dollars yearly, the sum accruing to the United States from the whale fisheries alone, are surely but an inconsiderable fraction of the priceless treasures that might be fished up from the inexhaustible depths of the great Arctic Sea. And this will be, one day, the rich possession of the numerous people who will find their homes on the eastern slopes of the Rocky Mountains and in the fertile valleys and the prairies which end only where the settled country of Canada begins.

THE WAY TO THE NORTH WEST.

Hitherto it has been too generally believed that access to the beautiful countries of the North West is extremely difficult, if not impossible. This idea may have arisen from the circumstance that the Hudson's Bay Company have been in the habit of travelling thither by long, circuitous, difficult, and even dangerous routes. It seems extraordinary that they should have preferred to convey their stores and merchandise round by the stormy waters of the north, with their only port at York Factory on Hudson's Bay, which is almost always frozen, when a more direct way was at their command by the Canadian lakes and the chain of waters which extend from Lake Superior to the vicinity of their settlement on Red River. This may have led to the belief that there existed no better route. Recent explorations have shown, however, that the journey from Canada to the North West is shorter than has been supposed, and comparatively easy; that, indeed, where there are portages or carrying places, a great highway might be established, only a little longer than the most direct or air line from Fort William, at the head of Lake Superior, to Fort Garry, on the Red River. (Air line with a little road making 377 miles—route by land and water 454 miles.)

Nor does this route pass through a barren and inhospitable wilderness. The height of land separating Lake Superior from the countries to the westward once passed, the rivers and lakes are bordered by prairies and luxuriant woods. Nor are these regions without inhabitants. In addition to the Indian tribes, who are by no means hostile, there are numerous settlers of European origin, and several missions have been in existence for many years. The colonists of Red River, who are most anxious to hold relations with Canada, would prefer this route to the more circuitous, difficult, and dangerous one by Pembina and through the state of Minnesota. They gave proof of this preference by undertaking themselves to make a road ninety miles in length, from that settlement to the Lake of the Woods, which constitutes so large a portion of navigable waters extending to within thirty miles of Lake Superior. The Government of the dominion of Canada, in consideration of the loss of the crops at Red River this year, 1868, have relieved the settlers from this responsibility and are now actually directing the construction of a road from Fort Garry in connection with the navigable waters.

This route will in a short time hence be available for travel and traffic, part of the land from

Thunder bay (Lake Superior) towards the lake region, which lies between Lake Superior and the Red River country, being already constructed, and an appropriation having been made by the Canadian Government for the construction of 90 miles of waggon road from the last of the chain of lakes (the Lake of the Woods) to Fort Garry, the chief place in the Red River settlement.

It is not unreasonable to suppose that, by opening communication with the North-West territories, an important amount of trading will be at once established between those regions and Canada. At present the settlers at Red River are dependent for their supplies on the state of Minnesota. Goods can only be conveyed from St. Paul, the chief city of that state, with considerable difficulty and at great expense. The North-Western people would find a cheaper and equally well supplied market in Canada; and as has just been shown, the cost of carriage would be materially less. The able men who direct the energies of the Hudson's Bay Company would be among the first, undoubtedly, to see the advantages of the new route and to avail themselves of them. Canada cannot fail to recognise her interest in such great public, even national improvements. Trade, to the value of many millions yearly, would be directed to her borders; wealth would flow to her from the gold mines of the Fraser, the coal fields of Vancouver, the inexhaustible fisheries of British Columbia, and the fertile plains of the Saskatchewan, the Red River, and the Assiniboine—waters which, communicating by means of portages, lead all the way to the immediate neighborhood of Lake Superior.

And what if the highway to the distant East—to China and Japan; to the lovely islands of the Pacific, to Borneo, to New Zealand, to golden Australia, and our vast Indian empire—should pass through the beautiful and productive valleys of the North-West?

A railway from Halifax or Quebec to the western coast of the American continent has been spoken of; and, indeed, such a way could be more easily made along the banks of the Saskatchewan and the northern passes than through the more mountainous country some degrees farther south. Nor would the Rocky Mountains be an insurmountable barrier. They could be pierced without any serious engineering difficulties at the sources of the Mackenzie and Frazer Rivers, or at the point where they were traversed by Sir George Simpson, with a long train of horses, waggons, and baggage, at the head waters of the Saskatchewan and Columbia. In the meantime, other kinds of roads and modes of conveyance may be adopted with almost equally great advantage. The more direct way to Red River, by the lakes which already almost connect the Canadian lakes with the settlement at Fort Garry, once established, as it must be in a year or two, the great highway as far as the Rocky Mountains, and within 200 miles of Frazer River, is complete, the rivers and lakes extending westward from Red River, being navigable even for vessels of large tonnage eight hundred miles of the way. At present there is no other route to the rich and populous lands of the eastern hemisphere than by the stormy seas of Asia and Africa, across the Isthmus of Panama, round Cape Horn, or through the dangerous Straits of Magellan, or by what is called "the overland route," through foreign countries. Whether the nations of Europe will continue to prefer these ways, which, however long and difficult and dangerous, have the sanction of antiquity, it is obvious that Canada, as she increases in wealth and population, will find the new way, although all but untrodden as yet, more convenient, perhaps even essential, for the wants of her trade.

☞ The directors of the Connecticut Western Railroad Company have voted to locate the road from Hartford to Collinsville, by the way of Bloomfield, Tariffville notch and North Canton. The road is to follow Brick-Kiln brook from Hartford, through Blue Hills to Bloomfield,

☞ Articles of association were filed on the 25th of June incorporating the Brooklyn, Flatbush and Coney Island Railroad Company. The road is to run from a point in the town of Flatbush to Coney Island, a distance of about six and a half miles. Capital stock two hundred thousand dollars.

The Chinaman as a Railroad Builder.

It is a significant fact that at the laying of the last rail on the Pacific Railroad, John Chinaman occupied a prominent position. He if was who commenced, and it was he who finished, the great work; and but for his skill and industry the Central Pacific Railroad might not now have been carried eastward of the Sierras. The experience of this undertaking has proved that the Chinaman is an admirable railroad builder. His labor is cheap, his temper is good, his disposition is docile, his industry is unflagging, his strength and endurance are wonderful, and his mechanical skill is remarkable. There are Chinamen in the employ of the Central Pacific Company who are more clever in aligning roads than many white men who have been educated to the business, and these Mongols will strike a truer line for a longer distance with the unassisted eye than most white men can with the aid of instruments. A good deal of nonsense has been talked about the Chinaman's want of stamina, and his inferiority to the white laborer in point of strength and capacity for work. The Central Railroad has pretty thoroughly settled that point; for numerous experiments have been made during its construction, with a view to test the respective capabilities of the two races. On one occasion a party of Irishmen and a party of Chinamen were pitted against each other in blasting a hard rock for tunnel. Bets were freely made that the white men would come out winners; but at the end of the day, when the work of each party was measured, it was found that John Chinaman had burrowed further into the rock than his antagonist, and was, moreover, less fatigued.

The bands of Chinamen now organized by the Central Company are as fine railroad builders as can be found anywhere. The officers of the Union Pacific road were amazed at the work these fellows did, and it is by no means improbable that our Eastern friends will endeavor to secure some of these trained gangs for the next railroad enterprise in which they may engage. Many of the Chinese bosses, or heads of gangs on the Pacific Railroad, are very intelligent men, and a few days since we were present when one of these entered a car and engaged in a conversation then going on, speaking good English, and showing an extensive acquaintance with railroad matters. It is well that we should bear in mind the great assistance that the Chinese have afforded to the Pacific Railroad, and that we should remember the difficulties which their presence dissipated. The training they have received on that road has given to California a large body of men peculiarly adapted to this description of work, and it has rendered comparatively easy the carrying out of other enterprises of the same character. They will probably be largely employed in the construction of the California and Oregon Railroad, now about to be entered upon; and, while they do not prevent the engagement of white men, they will facilitate enterprises which might be impracticable, lacking their aid. The Chinaman is a born railroad builder, and as such he is destined to be most useful to California, and, indeed, to the whole Pacific slope.—*San Francisco Times.*

Newark and New York Railroad.

A train, consisting of an engine and one passenger car, passed over the Newark and New York R. R. on the 30th ult., and it is intended to have regular trains running by the 20th inst. The work on this line has been pushed forward with great energy. The President, John McGregor, Chief Engineer Moore, and Francis Mackin, one of the directors, deserve credit for their exertions in carrying out this enterprise. The route to Newark is much shorter than by the other roads, and trains will run in much less time. It is also understood that the rates will be lower than by the other lines.

Eastern Shore Railroad.

The railroad muddle is not likely to be long-lived. The directors held a meeting at Millington on Wednesday of last week, when the contractors gave them every assurance that the contract would be fully complied with. Four hundred tons of iron, enough to complete the road to or below Millington, has been ordered down. If the contractors can stand purchases of this character, receiving their money promptly from the company, little apprehension need be felt of an early completion of the road. The end from Massey's to Townsend is now in running order.—*Centreville Citizen.*

Railroads, Bridges, Explorations.

Particular attention given to the Examination of Public Works for Capitalists seeking Investments.

Novel Rail, Chair and Spike or Fastening, etc., etc.

THIS RAIL IS SUPPORTED IN THE RISE BY quarter circles of iron; on the base with a V making it stronger vertically. The V is let into an opposite shape in the chair and also in the wood of ties—the chairs single or double have inverted conical pin or station pins placed in a straight hole in the frame work of road, filled with tar, etc. The rails are attached to the chair by two one inch pins coming up through the rail with little action, the fastening being in the centre of the rail, and the expansion and contraction of the rail being to and from the ends, the fish plate is entirely superfluous. Every third rail may be pinned in the centre, the join of the ends would be midway on a double chair having pins raised 1¼ inches long by ¾ inch thick, the rail slatted to receive them with short lips over the rail. The spike has flanges on the sides, wider apart at the head than at the point, and side holders so that they will be keyed in by shrinkage and pressure of the wood; the spike now used is a straight bar about ¾ inch, when the tie shrinks from the sides against the bar, the tie opens and splits almost in every case, the ties are bored to take up shrinkage, this spike will prevent it. On hand all sizes of these self-keying spikes and nails, also ordinary chair with the station pin or pins.

For sale by the inventor,

TO CONTRACTORS.

SEALED PROPOSALS will be received by the undersigned, at the office of the Company, No. 450 Main street, Memphis, Tennessee, until 12 o'clock noon, on the 20th day of July, 1869, for the Clearing, Graduation, Masonry, Bridging and Crossties necessary to complete the above road from Memphis to Covington, about thirty-six miles, ready for the iron rails. A large portion of the work is heavy, and well worthy the attention of contractors. As it is the intention of the Board to place the entire road to Cairo under contract as soon as the surveys are completed.

Proposals may be made for cash, or for county bonds, or for part cash, county bonds and stock.

Plans, profiles and specifications are now ready for inspection at the Company's office, by application to Thos. H. Millington, Chief Engineer, from whom all necessary information may be obtained.

Proposals will be received for the whole work, or in divisions.

The right is reserved to reject any and all bids not deemed satisfactory.

(Signed) A. S. MITCHELL,
President Mississippi River Railroad.

Memphis, Tenn. June 23, 1869.

TO RAILROAD CONTRACTORS.

Memphis, El Paso and Pacific RAILROAD COMPANY.

Office of the Chief Engineer,
Memphis, El Paso and Pacific Railroad Company,
66 Exchange Place,
NEW YORK, June 8th, 1869.

SEALED PROPOSALS will be received at the above Office, until **September 1st, 1869,** when Contracts will be awarded, for the GRUBBING and CLEARING, GRADING, MASONRY, BRIDGING, BALLASTING, CROSS TIES and TRACKLAYING of the following portions of said Railroad:

FIRST—The last Fifteen miles on the First Division of One Hundred and Fifty Miles, between Jefferson and Paris, Texas, commencing Eight miles east and extending Seven miles west of the town of Clarksville, in Red River County.

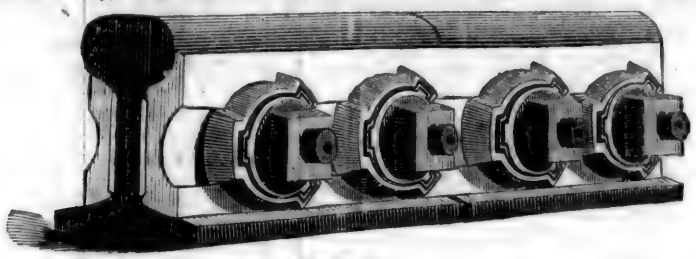
SECOND—One Hundred and Fifty miles, embracing the Second Division, commencing at Paris and extending westward, to Palo Pinto County.

Specifications, Profiles, Maps and Plans can be examined after the FIFTEENTH OF AUGUST, 1869, at the ENGINEER'S OFFICE, in NEW YORK or JEFFERSON.

Proposals must conform to the specification which will be furnished upon application at either of the above places after August 1st, 1869.

Evidence of ability to complete contracts will be required and a percentage retained of estimates until each section of five miles is finished.

Work upon the First Division must be completed by March 1st, 1870.



The Second Division must be finished by October 1st, 1870.

Every facility will be furnished those wishing to inspect the ground on the line of the road, by application in person at the Engineer's Office in Jefferson.

J. M. DANIEL, Engineer in Chief,

Memphis, El Paso and Pacific R. R. Comp'y.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

Bridge over the Missouri River.

The laying of the corner stone of the Cameron and Kansas Railroad Bridge at Kansas City, took place on the 1st of August, 1867. On the 3d of July, 1869, over forty thousand persons assembled at the same place to witness the completion and opening of this the first railroad bridge across the Missouri river. The event was celebrated by a procession and a banquet. After the procession had passed over the bridge, the structure was put to a severe test by placing five locomotives and a train loaded with iron on each span. The result was most satisfactory. The following description of the bridge is from the St. Joseph *Herald:*

The total length of the bridge proper is 1,395 feet; it is supported by seven piers. The spans are:

	Feet.
One shore span on Pacific Railroad of	70
One span reaching to channel of river of	135
One pivot draw span of	360
One main adjoining span of	250
Two spans of 200 feet each	400
One span reaching to north shore	180
Whole length	1,395

The railroad reaches the bridge level on the north side by passing over 2,360 feet of trestle work, the grade raising one foot in the hundred, from an embankment, while upon the south, or Kansas City side, an excavation in the bluff carries the road round a sharp curve to the west into the Kaw River bottom, where a junction is made with the Western and Southern Roads.

The location of the piers is as follows (low water standing):

1st pier, 21 feet of water and 2 feet of land.
2d pier, 25 feet of water and 8 feet of land.
3d pier, 19 feet of water and 23 feet of land.
4th pier, 10 feet of water and 45 feet of land.
5th pier, 5 feet of water and 62 feet of land.
6th pier, 3 feet above water and 83 feet of land.
7th pier, 3 feet above water and 97 feet of land.

On account of the shifting of the sand it was found necessary to go down to the bed rock with the first four piers. To do this in such a current, (averaging six miles an hour,) new devices and inventions were originated.

To convey an adequate idea of the difficulty in securing a foundation for the piers in the water and sand, we give a brief description of the building of Pier No. 4. It will be seen from the above table that forty-five feet of sand had to be driven through in addition to the ten feet of water. The bold and novel plan of driving a pier of masonry bodily to the rock, a distance of fifty-five feet, was adopted. The pier was built upon a caisson, the construction of which required 60,000 feet of oak timber, and 22,000 pounds of wrought iron; it was 70 feet long, 22½ feet wide and 12 feet high, with pointed ends. It was built with double walls, the outer vertical, and the inner inclining inward and upward, the two uniting at the base in a sharp cutting edge, shod with iron. It had three cross walls of similar form. This was built on shore and floated to its place. This case was inclosed by sixty piles; upon the piles were mounted seven trusses, capable of carrying 2,000 tons. Twenty-four suspension screws 26 feet long and 2½ to 3 inches in diameter, were placed in the truss frame above.

The caisson being in position, it was raised by the screws in the trusses, the false bottom removed and lowered upon the sand, the spaces between the double walls were filled with concrete. The dredging machine, worked by an engine of 25-horse power, was now set in motion, working from the well-holes; the descent was regulated by the screws in the truss frame. As fast as the mass of masonry and caisson descended, additional sections were added to the caisson, within which the cut stone blocks of masonry were laid. The endless chain dredges from the well-holes, aided by the immense pressure of masonry, rendered the descent rapid. The first material excavated was a fine mud, then a coarse sand. Gangs of men were kept at work night and day. The work encountered two sunken logs; one of them was removed by the divers, while, the other, fifteen inches through, was broken. The pier came at last to a bearing upon stiff clay; the dredge could do nothing, rock must be reached. A force of eight divers was set at work to finish the excavation, working, in alternate gangs, day and night, in the chambers of the lower section, beneath the masonry, removing the boulders one by one. The stones removed were from pebbles to 250 pounds. At length, on the 10th of March, 1869, the divers brought the pier to a bearing upon the rock. The well-holes were now filled with concrete and the pier finished.

The superstructure fixed is of the double triangular truss; the lower chords, and all others strained in tension, are of wrought iron—the top chords of wood. The draw is entirely of wrought iron, weighing 350 tons, and turns on a pivot. When the draw is open the ends rest on piers built to receive them. The draw will open and shut by steam. It is 60 feet longer than any other draw ever erected—Rock Island bridge being 280 feet, Clinton 300 feet, while this is 360 feet.

The bridge unites the North Missouri, Cameron branch of the Hannibal and St. Joe, and the Missouri Valley Railroads on the north of the river with the Union Pacific, E. D., Missouri Pacific, Kansas City and Fort Scott and the Missouri River Railroads on the south of the river.

This bridge is part of a system long since inaugurated and now accomplished—the connection of the Lakes with the Gulf by rail. It would be unjust to omit the mention of the early movers in this enterprise. We refer particularly to Colonel K. COATS, President of the Gulf Railroad; Dr. J. LYKINS, S. W. BOUTON, JOSEPH C. RANSOM, Esq., and others; but to no one is the project so much indebted as to Hon. R. T. VAN HORN, the member of Congress from the Sixth District. He, in 1856–57, drew the charter of the Kansas City, Galveston and Lake Superior Railroad (now Cameron and Gulf Roads.) The charter provides for bridging the Missouri River and regulating the gauge of the roads. A second bridge charter was obtained in 1863, by Messrs. VAN HORN and others, which right was transferred to the present structure. The consent of Congress had to be obtained. The news was telegraphed to Colonel VAN HORN, then in Congress, that Congressional sanction was vital to the work; in three days a bill to that effect had passed the House, and in ten it was a law.

The bridge was built by a company of which Mr. JAS. F. JOY is the President. Mr. G. CHANUTE is the Engineer-in-Chief. The work is a splendid monument to his genius. It cost about $1,200,000, and has been two and a half years in building.

☞ Mr. S. H. H. Clark has been appointed purchasing agent of the Union Pacific railroad—headquarters at Omaha.

Russian Railways.

The chief inspector of Russian railways has just published an account of the state of the traffic on the railways of the Empire for the last two years. He states that the traffic of 1868 was carried over 664 miles of the Governmental lines, and 3,611 miles of private lines—the last having been traversed by 7,743,538 passengers in 1867, and 8,783,299 in 1868. The amount of the goods forwarded by the private lines in 1867 was 116,050,000 cwt., against 153,900,000 cwt. in 1868. The gross receipts of all the private lines are about £5,423,809 (37,999,465 roubles) for 1867, and about £6,666,522 (46,665,742 roubles) for 1868; showing an increase of £1,237,713. This increase would probably be far greater if all the main lines leading to Moscow and St. Petersburg were provided with double rails. The lines of Moscow-Riazan and Moscow-Koursk are furnished only with single rails, so that the accumulation of goods at different stations is enormous.

Michigan Central Railroad.

The earnings of this road for the years ending May 31, 1868 and 1869, were as follows:

	1868.	1869.
From passengers ...	$1,721,506 97	$1,795,806 11
" freight	2,480,974 16	2,755,200 48
" miscellaneous..	268,398 51	165,286 30
	$4,470,879 64	$4,716,292 89
Expenses, viz:		
Repairs of road.....	$700,636 18	$557,292 25
" buildings ..	120,366 20	200,052 96

Miscellaneous.....	90,024 61	50,008 74
	$2,714,545 64	$2,886,943 39
Net earnings	$1,756,334 00	$1,829,349 50

Compared with the previous year the gross earnings show an increase of $245,413 25; with an increase in expenses of $172,397 75—making the increase in net earnings $73,015 50.

The earnings from passengers show an increase of $74,299 14, and the earnings from freight, $274,226 32, with a decrease in miscellaneous of $103,112 21.

Passenger earnings per mile were $6,323 26; freight, $9,701 41; miscellaneous, $581 99—total, $16,606 66, an increase over the previous year of $3,017 37.

The expenses of operating the road (not including taxes) were $2,782,467 79, or 59 per cent. In 1868, they were 58.38 per cent.; in 1867, 62.81; in 1866, 61; in 1865, 55.8; in 1864, 47.6; in 1863, 40.4; in 1862, 45.1; in 1861, 51; and in 1860, 53.7. The expenses, including taxes, the past year, were 61.21, against 60.71 in 1868, and 65.35 in 1867. The president in his report says:

The expense of operating has been somewhat larger in proportion to earnings, by reason of the increased winter business resulting from the transportation of grain in bulk to the seaboard. This has occurred during the past winter to a very large extent, for the first time in the history of the railroads of the country; and though done at low rates, was to some extent profitable. This transportation of grain by rail, which has heretofore always been by water, has resulted from the establishment of the through line of freight cars, avoiding the necessity of any change or transfer of freight from its starting point in the West to its place of destination in the East. It was a very large business during the winter, and caused considerable increase of the expense of operation. It is a strong indication of the results of the harmonious workings of the various roads constituting the line between ew England and New York and the West co-operating for the general good. It is, however, but a beginning of the valuable results to the country and to the railroads themselves which will accrue from such harmony, coupled with the indispensable improvement of the tracks of the various roads—which is the great duty of railway managers—and the removal of every possible unnecessary charge upon property in its progress from the producer to the consumer.

The gross business of the year in the amount of tonnage transported, has increased nearly 25 per cent. The reduction of rates, however, resulting from competition, has been such that the revenues of the Company have not increased in the same ratio; and, indeed, it is not desirable that they should. In view of the rapid development of the country, and especially of the progressive and rapid settlements of the West, and vast increase of its productions, depending upon cheap transportation for their value, the great aim of railway companies should be to so perfect their roads and appointments as to transact the immense business of the country at the least possible expense, and rely upon the volume of business to be done at reasonable rates rather than upon smaller amounts with higher charges.

The reduction of through passenger fares during the past year, has been one-fifth, and perhaps that of the rates of through freight has been nearly in proportion.

The track of the road and equipments of motive power and rolling stock have been not only kept up to standard, but considerably improved during the year. Additional locomotives have been placed upon the road, though from the increased volume of business there is a necessity for some addition still to its motive power to enable it to meet the requirements of business.

The completion of the railroad from Grand Rapids to Kalamazoo, has created a necessity for some, though not expensive improvements to accommodate it at the latter place.

The Jackson, Lansing and Saginaw road is doing an increasing and healthy business. The Grand River Valley Railroad, from Jackson to Grand Rapids, is drawing near its completion. They all promise to be valuable contributors to the traffic of the road of this company.

It has been found necessary at Jackson to erect a new and additional freight-house to accommodate the enlarged business at that point; and during the past year a substantial one of brick has been built, at a cost of $26,000. Some enlarged accommodations for passengers at that place will also be required. The construction also of another railroad from that point to Fort Wayne, now in a good state of forwardness, renders the improvements all the more indispensable. These roads, taken up and constructed by the enterprising people of that place, bid fair to make it, not only the most important place upon our road, but to place it in the rank of the most important cities of the State.

The reports of the General Superintendent and of the other heads of departments will show more fully the present condition and operation of their departments during the year, to which your attention is called for more detailed information, the general careful management of which the Board takes pleasure in commending.

They also take pleasure in stating that the relations of the Western roads with the Eastern or Trunk lines, as they have sometimes called themselves, have become greatly improved. They have come to realize that they are not independent roads, but are parts only of great lines extending from Chicago to New York and Boston, and that their interest and prosperity are connected with the interests and prosperity of the whole lines. The days of arbitrary rates by the Eastern portions of the lines have passed by. Hereafter it is believed that the competition will be between the various through lines, and that each part of every line will be content to share the burdens and the benefits resulting from their common interest. The management, therefore, will be more in harmony; the difficulties in the way of business will be much less, and the general reaults more satisfactory to all parts of the lines.

It will be seen from the foregoing, that while the net results during the past year have been less than in former years in proportion to the business done, yet on the whole, they have been satisfactory, and the future seems to be full of promise. But those only who are familiar with the West can realize its progress or extent, the vast immigration spreading over it, or the rapidity with which its fertile domains are brought into cultivation, and its towns and cities are springing up, or the speed with which the railway follows, and sometimes outstrips the immigration as it spreads over the great Western prairies. All these things foreshadow long continued and constant increase of business—quite as rapid in the future as in the past—and though in the past many avenues for its accommodation have been opened to the seaboard, they have not really kept pace with the progress and developement of the business of the country. The Board, therefore, cannot but regard the future with strengthened confidence in continued prosperity of the property of the company.

The total number of tons of freight moved has been 802,835; of which 341,286 tons were through, and 461,449 local. Of the through freight, 251,972 tons went east, and 89,744 west. Of the local freight, 241,750 tons went east, and 219,699 west. Total tonnage east, 493,422; do., west, 309,413.

The whole number of passengers carried was 846,452; of whom 698,011 were local, 121,459 through and 26,982 emigrants. Of the local passengers, 344,653 went east and 253,357 west. Of the through passengers, 55,442 went east and 66,017 west. Total passengers east, 400,096; do., west, (including emigrants) 446,356. The superintendent in his report says:

The passenger traffic for the year shows in the aggregate a healthy increase of both local and through.

The arrangement with the roads and lines east of Suspension Bridge and Buffalo taking effect on the first of January last, wherein the earnings on all through traffic, both passenger and freight, are pro rated, has reduced the receipts of this company per passenger on the through business, but it is believed to be compensated for in the removal of troublesome restrictions and arbitrary rates at certain seasons heretofore imposed on our East bound through

freight, as also in securing greater co-operation in the general interests and working of the line for the long traffic.

In addition to the four through daily passenger trains in each direction, a daily train is continued between Detroit and Dexter, which will soon be necessarily extended to Jackson.

Day and night trains are also run between Chicago and Michigan City, connecting thence through to Lafayette, Indianapolis, Cincinnati, Louisville and New Albany, and it has this season been found necessary to run a daily train between Chicago and Kalamazoo, in order to relieve the express passenger trains and better accommodate the growing way travel; this train, as far as practicable, being run between Chicago and Michigan City in connection with the Louisville Express.

The passenger equipment of the road has been materially improved during the year,—constant regard being given to uniformity of cars and trains, and consequent strength and resisting power, thereby securing the greater immunity from accident.

Of the 846,452 passengers carried during the year, no one of them has been injured. And of the 10,120,022 persons carried altogether since the commencement of the road, no passenger has ever been injured inside the first-class cars of this company.

The freight earnings, as anticipated in our last report, show material increase, chiefly owing to the enlarged facilities afforded to the East bound traffic.

Notwithstanding the reduced rates received on the through eastward shipments for three months succeeding 15th February,—being much lower than at any previous period covering the same season,—the larger tonnage carried has materially increased the gross earnings in this direction.

The article of bulk grain, which until the completion of uniform gauge between Detroit and Suspension Bridge, has formed no part of our traffic, has now become its principal item.

From entire through shipments of 1,060,160 bushels during the year ending May 31st, 1868, this business has increased to 3,706,240 bushels during the year now expired; and the tonnage would have been much greater had we been able to provide a sufficient number of cars and proper handling facilities.

The quick transit of grain by rail, as compared with water, the uniform good condition of delivery, and the convenience of quantity as suited to the means of all dealers, is becoming more apparent, and must soon, to a large extent, change the grain carrying trade. Adding to these advantages increased track facilities over the several trunk lines, and a moderate and less expensive rate of speed, there can hardly be a question as to the ultimate movement of the bulk of this trade.

The working of the Through or Blue Line with cars of uniform style of build, continues to give excellent results; particularly in lessening the chances of delay as compared with the use of cars of mixed construction and consequent difficulty of repair while remote from their own roads.

All the Trunk roads in interest are at the present time adding to their quotas of the uniform stock. The completion of the Kalamazoo, Allegan and Grand Rapids Railroad, and the opening of a portion of the Grand River Valley road, with which close business relations are established, as also with the Jackson, Lansing and Saginaw road at Jackson, is increasing the local business of the road largely to and from their points of intersection.

The relative cost of operating the road, as compared with gross receipts, has been six per cent. above the previous year, while the increased tonnage carried has amounted to 25.72 per cent. The outlay for road repairs has been 21 per cent. less than the previous year, when more than ordinary expense was incurred in improving the track. The following materials have been used in the track: 3,419½ tons re-rolled rails, 3,315⅔ tons repaired rails, 2,515 kegs spike. 76,415 ties, and 16,455 new splice joints. The re-rolled rails have laid 35.68 miles; the repaired rails, 34.60 miles; and replaced rails, 30.94 miles—total of entirely renewed track, 101.22 miles, being 35½ per cent. of the entire road. The expense of locomotive repairs show an increase of but 5 per cent, with 15 per cent. increased service.

The passenger coaches are supplied with the Ruttan plan of ventilation, which is successful in the almost entire exclusion of dust and cinders, and the production of an abundant supply of pure air. All the 12-wheeled first-class coaches are of uniform size and style of build; and in renewing care is taken to preserve uniformity in the improvements, consisting of raised roofs, and the application of the Miller Platform Coupling and Buffer, also the Myer's safety train brake.

INCOME ACCOUNT.

Balance from previous year		$582,243 95
Receipts from pass	$1,825,484 82	
" freight	2,762,678 47	
" miscel	164,061 33	
		4,752,224 62
Total		$5,334,468 57
Expenses, including local taxes		$2,886,043 39
Payments towards sinking funds		84,500 00
Interest and exchange account		536,865 98
Dividends July 1, 1868 and January 1, 1869, 5 per cent. each		878,625 00
U. S. tax on dividends		101.187 95
" receipts		46,312 68
Balance to new account		800,033 57
		$5,334,468 57

It will be seen from the above that the total net income of the company, after payment of operating expenses, local and government taxes, interest and exchange, and the annual contribution to the sinking fund, has been $1,096,414 62, against $953,678 73 in 1868—an increase of $142,735 89.

The bonded debt has been decreased by conversion of bonds to stock to the extent of $1,815,500. The capital stock has been increased by that amount, and by amount of stock dividend Jan. 1, 1869, $904,400. The bonded debt now amounts to $5,153,488 89, and the capital stock to $11,197,348—total $16,350,836 89. The sum invested in the sinking funds for the redemption of the bonds amount to $1,351,599 35. The company is free from floating debt. Construction account has been increased $1,037,759 09, the principal part of which is the amount of the stock dividend, representing permanent improvements for a series of years, the cost of which has been previously charged to operating account.

The company have 100 locomotives—22 burning wood and 78 burning coal. Miles run by locomotive passenger trains, 850,803; with freight trains, 1,076,384; working trains, 141,534; switching trains, 326,213—total miles run by locomotives 2,394,934. Cost per mile run for repairs, engineemen, firemen and wiping, fuel, oil, waste and rags, 81.52 cents. Av. miles run to cord of wood, 29.34; to ton of coal, 37.16; to gallon of oil, 121.39. Cost of wood per cord, $4.16; coal, per ton, $4.22; oil per gallon, 78 cents.

The cars are classified as follows: 57 day coaches, 10 sleeping, 8 second class, 14 military. 20 baggage and mail, 33 conductors', 391 stock, 697 merchandise, 155 Blue Line, 234 platform, 140 hand and 156 rubble cars.

President.—JAMES F. JOY.
Vice President.—NATHANIEL THAYER.
Directors.—James F. Jay, John W. Brooks, Nathaniel Thayer, Erastus Corning, J. M. Forbes, George F. Talman, Moses Taylor, Sidney Bartlett, Edward Jones.
Treasurer.—ISAAC LIVERMORE.
Superintendent.—H. E. SARGENT.
Auditor.—WILLIAM BOOTT.

☞ The work of laying the rails on the Wilmington and Reading Railroad was commenced on the 28th ult., at Coatesville, and it is expected that the road will be completed to Springfield, Chester County, by the close of the year. Contracts have been made for rails, sills, &c., for the whole line, also for cars and locomotives.

☞ The following gentlemen have been elected directors the Western Union Railroad Company: Alex. Mitchell, H. Crocker, Russell Sage, Walter S. Gurnee, John S. Gurnee, John S. Mitchell, S. S. Merrill, Henry T. Fuller, William S. Shannon, and D. W. Dame. President, Alexander Mitchell. Vice President, S. S. Merrill.

☞ The Quincy, Missouri and Pacific railroad company was organized at Quincy, Ills., on the 24th ult., by the election of a board of directors with C. A. Savage as President, H. Bull, Treasurer, and G. S. King, Secretary.

☞ Trains are running on the Burlington and Missouri railroad to Corning, in Adams county, 75 miles east of Council Bluffs.

Wooden Railways in Canada.

Messrs. Robertson and M'Govern, of Sherbrooke were recently appointed a committee by their fellow townsmen to visit and report upon the cost, working, &c., of the Clifton Wooden Railway, and have certainly submitted a detailed statement of great importance. The locality, length of the Clifton road, &c., have frequently been, and were originally stated in these columns, and passing over these details we come to the more material portion of the report. The locomotives weigh ten tons without wood or water, have taken from 30 to 40 tons freight a trip, and cost $6,500 each, American currency. They have since been supplemented by engines weighing twenty tons and costing $8,500, which will draw double the weight on the general down grade from the mines to Ogdensburg, over, in some places, an up grade of from 80 to 90 feet to the mile as soon as some portions of the road bed have been strengthened, some of the rails now springing under the immense weight.

The cost of keeping up the track, continues the committee, has been, and will not hereafter, Mr. Hurlbert (engineer of the road) says, exceed the wages of two men for every three miles of road, and these will keep it in good running order and replace the worn out as fast as required. This does not include renewal of trestle or crib work. We notice that from one to two new rails per mile were put in this spring, and this was rendered necessary from the difficulty of obtaining good sound maple when the road was built, and some of the rails had got "warped" before being used, so that they were laid on the ties "heart side" up; they will not last so long that way as if the heart of the rail was laid downwards. We counted 21 track men on the 20 miles we passed over, the track was required to be made ready for the large locomotives as quick as possible. It is estimated that these 20-ton locomotives will take easily 80 tons per trip, and they intend to make two trips daily. It takes 22,000 feet maple to lay a mile of track, and from $80 to $100 States currency will pay for the labor required to place it in position. We may mention that we came down from the mines at the rate of 8 miles an hour, including all stoppages, having about 25 tons freight aboard. Mr. Hurlbert is strongly in favor of the gauge in use generally in the United States for railways, and thinks that a narrower gauge than 4 feet 8½ inches will not be found an improvement, though at the same time he acknowledges that rolling stock can be built much cheaper for a gauge say 3½ or 4 feet than for the other gauge. As regards the difficulty of running these wooden railways in winter, we may remark that there is as much snow at Clifton as in this part of the country. Winter before last there were from 3 to 4 feet of snow for three months, when the railway was in daily use, the trains making almost daily two double trips, and at least one trip was made every day (except Sundays) during the entire winter. Mr. Hurlbert says that the ice on the wooden rail is no worse than an iron one; that they have to use sand occasionally as on an iron road; that they use a snow plough and sand, and find no more difficulty in keeping the track clear and fit for use than on an iron railway, except that where the grades are the "stiffest"—from 200 to 350 feet to the mile—they have to use sand more freely than they do on more level grades in order to overcome the snow and ice. We noticed that where in building an iron railway there would have been "deep fills" that trestle work was used for cheapness; and in some cases for a long distance where, say a mile or more of low wet land had to be crossed, the track was made by placing logs crosswise of the road, with stringers upon these logs, the ties being placed in the usual way upon the longitudinal stringers. This gives a cheap roadway perfectly safe for a number of years. In the meantime the road can be used for traffic and also for filling up such places with earthwork as may be required. When we traveled over the railway the rails were quite wet, and in going up the steepest grades sand had to be used; the cars were loaded with from 15 to 18 tons of castings for the works at the mines. The sharpest curves on the road were of 250 feet radius, which would seem hardly practicable, but it is beyond question that such curves are used in several places to avoid rock cuttings. A 14 ton engine can draw, on these wooden roads on an occasional up grade of 250 feet to the mile, 20 tons of freight easily; and from 100 to 140 feet grade is not considered very objectionable; of course the easier grades the better for any sort of road, and the more level the route can be made, without too great expense, the better. The rails are made of maple, 14 feet long, 6 by 4 inches, laid edgewise. Mr. Hurlbert suggests that rails would be best 7 by 3½ inches. The rim of the wheels are like those used on iron railways, only wider and the flanges a little bevelled, so that the flange in pressing against the rail does not cut it. We did not see a single rail "broomed up" or cut on the inside, and only a few on the outside, where the heart of the rail had been laid uppermost. The "switches" are made in the usual way, the rails being kept together with iron rods when required to be moved. The "keys" are made of maple plank. The rails are sunk into the ties (which are cut into six inches wide and four inches deep) and are kept in place by wedges or keys, twelve inches long by four inches wide and one and a half inch thick at one end, by ¾ of an inch at the other, and driven in on the outside of the rail, keeping it against the shoulder of the tie. The ties are put down without being sided." There has not been a single car off the tracks since the road went into operation. The country through which the Clifton Railway is built is not only broken but even mountainous, and there is no difficulty, in our opinion, in constructing such a railway in almost any part of these townships. From the information obtained as to the cost of labor, materials, &c., in the vicinity of the Clifton road, we are of opinion that the cost of grading, furnishing ties and rails, and laying the same, with a moderate allowance of rolling stock, sufficient for some years, will not exceed, for our railways, $5,000 a mile, exclusive of large bridges—and this to build in a more permanent manner than the Clifton road is built. We are fully convinced of the practicability of wooden railways, where the principal object is a freight traffic, at rates of speed from 8 to 12 miles an hour, and that next to an iron railway, or where the cost of an iron road is too great to be undertaken, that wooden railways can be cheaply built, economically carried on, and a large paying business done by their means.

This satisfactory report sets the whole question of feasibility at rest, winter and summer, and will powerfully contribute, we think, to the construction of cheap wooden railroads all over the country.—*Montreal Gazette.*

Wilmington and Reading R. R.

This road commences at Wilmington, Delaware, intersecting the Pennsylvania Railroad at Coatesville, and the Reading Railroad at Birdsboro', and running to Reading. It is seventy-one miles in length, and passes through one of the most fertile and thickly peopled districts in eastern Pennsylvania and Delaware, and by its geographical position, must become one of the great avenues by which the anthracite and bituminous coal will reach a shipping-point on tide water. The entire road will be completed and equipped and in running order by January, 1870.

From the large and rich manufacturing districts through which this road runs it must prove largely remunerative. It passes within two miles of twenty-five towns and villages, and by the doors of fifty-eight manufacturing establishments, among which are anthracite furnaces, rolling mills, cotton mills, woolen factories, paper mills, founderies, grist mills, and many others.

These villages, towns, and factories, in 1868, consumed 247,468 tons of anthracite coal, 54,800 tons of bituminous coal, and worked up 49,200 tons of crude iron. Upon these articles the consumers will save from 50c. to $1.25 per ton by using this road instead of the most favorable avenues now open to them.—*Reading Eagle, July 2.*

North Eastern (S. C.) Railroad.

The earnings of this road for the years ending February 29, 1868, and February 28, 1869, were as follows:

	1868.	1869.
From passengers	$92,088 76	$84,203 72
" freight	172,648 32	151,844 89
" express	6,723 53	4,366 86
" mails	7,772 14	13,748 92
	$279,232 75	$254,164 39
Expenses, viz:		
Maintenance of road...	$43,265 84	$43,701 49

		97,014 33
Leaving a balance of.....		$11,710 97
Add balance from previous year.....		10,409 14
Total as in Balance Sheet		$22,120 11

Compared with the previous year, the gross earnings show a decrease of $25,068 36; with a decrease in expenses of $28,216 73—making the increase in net earnings, $3,148 37. The report says:

The deficiency which will be observed in our freights, was partially anticipated, and explained at your last meeting, as a probable consequence of the extreme depression which was then characterizing the agricultural interests of the country through which our road passes. It is also to be accounted for, in some measure, by the reductions of our tariffs which were made during the year, in the hope of extending and increasing our business. Their failure to do this can only be ascribed to the absence of other elements equally necessary to the recuperation of these interests, which it was neither in our power or province to supply—and hence the very limited requirements for the facilities we were prepared to extend. In a word, the country both contiguous to and remote from our line, has not afforded us a business proportionate to our capacities. The evidence of this appears in the fact that, during the past year, we should have transported but 18,988 bales of cotton, as against 26,691 bales the previous year, and 58,401 bales in 1860. We are not, however, to suppose that this state of things is to become permanent, or that the improvement which is perceptible in other sections of the State, is not, eventually, to be realized in those of which our road is the natural outlet. It may be gradual, and even slower than elsewhere, but already we are seeing some gratifying evidences of a change for the better. So far as the local and through travel are concerned, we have given ample accommodations to both, without deriving adequate returns from either. In view of the general prostration above alluded to, our local population could not be expected to move with the frequency, and in the numbers which it formerly did. Ex

perience shows that these depend less upon the single item of *fare*, than upon an expansion of its wants with the means of satisfying them, and meeting the incidental expenses connected with a departure from home. Until, therefore, our people become wealthier, these movements will necessarily be restricted to the more pressing demands of business. With the view, however, of encouraging them as far as possible, we have adopted the practice of issuing commutation tickets, to all our way stations, entitling their purchaser to a specific amount of transportation, at one half of our regular rates. That our through travel should not have increased, will occasion no surprise, in consequence of the delayed reconstruction of the Savannah and Charleston road. The break which it has presented in the otherwise continuous Atlantic Coast Line of roads, extending from St. Marks, (Fla.,) to Portland, (Me.,) has, unquestionably, turned from us, and from our city, a large proportion of the travel constantly passing between these extremities.

Our operating expenses have been brought to that point beyond which they could not be further reduced, without detriment to the company's interest, and the serious deterioration of its property. A rigid economy should, of course, be observed, but if carried to that extreme, which provokes accident and loss of property, it would become unwise and even criminal. A certain expenditure is unavoidable—the roadway and rolling stock, iron, bridges, culverts, etc., must all receive the same attention and repair, whether or not our trains carry their full complement of freight, or one, instead of one hundred passengers. It is true a more extended service would somewhat swell our expenses, but the ratio of our profits therefrom, would be greatly increased. From the foregoing review of our receipts and expenditures, the inference would seem correct, that they have touched their lowest level, and if, since the close of the war, they have yielded a net income equal to the annual interest of the company, on its various classes of indebtedness, amounting to some $90,000, there is a reasonable certainty of their doing so in future. The prospect of a dividend is still remote, and so entirely dependent upon the general improvement of the country, and especially the construction of new lines or feeders to extend the sphere of our operations, that any anticipations we might express upon this point would be too problematical to have any value. At present we can only deal with the facts and probabilities looking to that result. By the recent action of our Legislature, all the obstacles to the reconstruction of the Savannah road have been removed, and we are now assured of the determination of the company in charge of it to restore, at the earliest possible date, the valuable connections which it formerly afforded. To us these are of vital importance; indeed, that road may be regarded as an extension of this. We have, also, the pleasure of stating to you the revival of the charter of the South Carolina Central Railroad mainly by the citizens of Sumter and Clarendon, and under which they propose to construct a road about 45 miles long, from Sumter *via* Manning to Gourdin's Station on this road. This will place Sumter *within* 95 *miles of Charleston*, as now against 130 miles *via* Kingville, and 141 miles *via* Florence. As it will bring her nearer to Charleston than to Wilmington *by* 51 *miles*, we may safely assume that nearly all of the business of that interior thriving town and its surrounding country, will then seek our market over this as "the shortest, quickest and cheapest route." Its course through Clarendon, will open to the producers of Naval Stores and lumber an extended and profitable field of labor, and be the means of bringing into active cultivation many valuable, but now neglected plantations. Our present financial condition is not, perhaps, one to warrant our assisting this enterprise to the extent which it deserves, but we should certainly afford it all the aid and encouragement in our power. In passing, we would warmly commend it to the attention of our merchants. We have also to notice an increasing interest in the construction of the Cheraw and Salisbury road, especially among influential parties in North Carolina, which, it is hoped, will result in some active measures for its construction.

The amount of second mortgage bonds, originally issued, was $300,000—of which $145,000 were sold—the remaining $155,000 were subsequently pledged and deposited with Trustees, as a security for a corresponding amount of preferred stock, say $155,000. This preferred stock is then, virtually, a *substitute* for that amount of second mortgage bonds.

The company's first mortgage bonds, amounting $700,000, mature on the 1st September, 1869, while the second mortgage bonds for $300,000 are past due, having matured on the 1st September, 1868. Of the coupons representing the interest on the first, and unpaid up to March 1st, 1867, there are still outstanding about $92,000, and of those representing the interest on the second, and in the same position, there remain about $22,000. These, with our past due bonds, are now held by comparatively few parties, who have submitted to a delay in their settlement, until they could be embraced in the general plan of the company for the readjustment of their entire debt, to take effect in September next. We are also indebted in a balance of $28,000 on certain bonds for real estate in the city, purchased in 1853, and duly secured by a mortgage thereon. The liquidation of this balance, within a reasonable period, was confidently expected, but the financial condition of the company at that time did not permit it, and hence the mortgage upon this small moiety of their property remains, and is, of course, antecedent to those executed in 1855 and 1857, for the security respectively of their first and second mortgage bonds. In the readjustment of our debt, it would, therefore, be expedient and proper to consider these real estate bonds as among our first mortgage bonds, and to be absorbed by them, that the special mortgage thereon may be duly cancelled. We would, then, propose to you to consolidate and renew this whole indebtedness by the issue of 1640 bonds of $500 each, amounting to $820,000 to be dated 1st September, 1869, and payable 1st September, 1899, bearing 7 per cent. interest, payable semi-annually, by coupons attached, to be styled "First Preferred Bonds;" and by another issue of 644 bonds, of the same date, tenor and amount each, as the first, for $322,000, to be styled "Second Preferred Bonds," *both* to be secured by one general mortgage upon the entire property, rights, franchises, etc., of the company, duly expressing the order, and defining the conditions of these preferences, and their relations to each other. The First Preferred Bonds should then be offered in renewal of, or in exchange for our old.

First mortgage bonds for	$700,000
Outstanding interest and interest thereon	92,000
Real estate bonds	28,000
	$820,000
And the Second Preferred Bonds should be applied to our old Second Mortgage bonds for	$300,000
Outstanding coupons and interest thereon	22,000
	$322,000
Making our bonded debt	$1,142,000

The plan we have here indicated is, substantially, the one which has been adopted by other companies, under similar circumstances, and to which, as we conceive, when the extinguishment of the debt is an admitted impossibility, no just exception can be taken. A recourse to legal measures of a coercive character would result in no actual benefit, especially, while the administration of the road is, practically, for the benefit of the bondholder. If it be conceded that all the income is being derived from the property, which it is capable of producing, and that no part thereof is being appropriated by the stockholder, but on the contrary, is being faithfully applied to his obligations to the bondholder, then a reasonable regard on the part of the latter, for the interests of the former, should suggest a prompt acquiescence in the plan we have here indicated. Its details have had our careful attention, and as these have also been approved by eminent legal counsel, it is now submitted for your consideration, in the belief that it will fully meet all the objects in view, and prove acceptable to our creditors.

It affords us pleasure to state to you the generally good condition of the road and its structures. During the past year, considerable attention has been given to the widening of cuts and embankments, and the improved drainage of the road bed. The iron is in very fair condition, indeed, we may say, that there are few if any bars in the track, sufficiently worn or laminated, to require removal.

The company have 12 locomotives, 8 first class and 4 second class passenger cars, 3 baggage, 2 mail and express, 67 box and 43 platform cars. Number of miles run, 180,012. Number of through passengers, 10,754: do., way passengers, 27,908—total, 36,662. Bales of cotton transported, 18,988. Bbls. Naval stores, 40,521. Bushels rice, 16,668. Feet lumber, 3,884,000.

Superintendent.—S. S. SOLOMONS.

Secretary and Treasurer.—C. WILLIMAN.

A New Coal Road.

A new line of railway from Tremont, Schuylkill county, to the Lehigh Valley is soon to be built by the Lehigh Valley, the Morris and Essex, and the New Jersey Central railroad companies, which contribute equal amounts. The Pennsylvania Railroad Company have agreed to connect the Pennsylvania and Lykens Valley roads with it at Tremont. Starting from Tremont the new road will pass New Mines, Forestville, Wolff Creek, Mount Laffee, Wadesville, St. Clair, Windy Harbor, Silver Creek, Kaskawillian, Tuscarora, and Tamaqua, connecting with the Lehigh Valley Railroad at Lehighton. The length of the road will be 36 or 37 miles, and it is proposed to construct and equip it as a first-class coal road. The new route not only shortens the distance some seventy miles to New York, but places the coal region practically, where it is geographically, the nearest coal field to the city of New York, and at the same time gives the coal operator the advantage of both the New York and Philadelphia markets.—*Carbon Democrat.*

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, July 17, 1869.

Stock Exchange and Money Market.

The Money Market has shown much less activity, and more steadiness as to rates, since our last, call loans having fallen back to about 7 per cent. currency as the governing price, and discounts having been more readily conceded at from 8@10 per cent. per annum on strictly prime to very good grades of business paper. The more liberal disbursements of the Treasury Department, partly in payment for 5-20 bonds, bought in, have served to increase the available supply, and to facilitate negotiations, especially in a temporary form. The city banks have made an important addition to their assets, their specie reserve having been increased full 6¾ millions, their legal tender hoard nearly two millions, and their deposit average about 3¼ millions. The Sub-Treasurer has reduced his cash balances materially. The pending heavy purchasers of 5-20s on Treasury account will liberate over 13 millions of currency from the Treasury vaults before the close of July. This circumstance tends to strengthen the public confidence in the working of the loan and discount market in the immediate fixture.

The specie reserve of the city banks according to the latest return is $30,266,912, against $19,235,349 same time last year. The city bank deposits are now $183,197,239, against $224,320,141 week ending July 10, 1868. The legal tender reserve amounts to $48,702,728, against $68,531,542 same time last year. The circulation now stands at $34,277,945, against $24 068,202 same time last year. The loans are now $255,424,942, against $284,147.708 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $135,308,058 a day, against a daily average of $141,127,266 the preceding week, and $127,028,457 the week ending with June 23, 1869. The current week's exchanges average about $107,000,000 a day. The city banks, last week, reported a gain of $6,746,645 of specie, $3,267,772 of deposits, and $1,965,465 of legal tender notes. They reduced their loans, $2,943,529: and increased their circulation, $59,972.

The city bank exchanges on Wednesday were $123,956,875, and the resulting balances, $3,121,038.

National Bank notes to the amount of $132,592 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $316,397,730, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $16,616,635, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,898,931.) an actual circulation at this date, of $299,780,495. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342 871,100; and for the public deposits, $23,764,560—making a total of $366,635,660. The Treasury Department last week redeemed and destroyed $318,600 of worn and mutilated fractional currency, and issued $144,130 of new. The outstanding amount of fractional currency on the 1st of July, was $32,062,528 against $33,452,523 on June 1; $35,330,323, on May 1, $36,719,912 on the 1st of April, $36,781,548 on March 1, $35,511,127 on February 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending with July 10, were $34,957,441, including $2,004,169 from customs duties; payments, $17,794,235, including $3,382,000 of coin interest; balance at the close of the week, $97,209,700, against $80,046,494 at the close of the preceding week, showing an increase of $17,168,206. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $2,663,800, including $418,312 from customs, and payments, $5,087,385, including $697,871 of coin interest. On Tuesday, receipts, $7,497,671, including $416,315 from customs, and payments $7,363,191, including $720,591 of coin interest. The balance at the close of business on Tuesday stood at $94,320,598, against $98,230,998 a week previous; and $82,668,328 on June 30 1869. The aggregate receipts of the office in June were $55,052,216, including $8,847,210 from customs, aggregate payments, $47,347,878, including $3,131,675 of coin interest.

The assets of the United States Sub Treasury as they stood at the close of June, and the administration of the Hon. Henry H. Van Dyck, amounting in all to $102,727,648 29, were all actually counted between the afternoon of Friday,

June 30, and 10 P. M. Saturday, July 10, 1869, and found to correspond precisely with the official returns of the late Sub-Treasurer. Some 30 millions of currency, and over 72 millions of coin and bullion were thus handled. The currency notes and gold pieces were all counted, dollar after dollar, and the gold bars were separately weighed. The result of the count is justly regarded as the most conclusive proof of the exactness, fidelity and uprightness with which the affairs of the Sub-Treasury were administered by Mr. Van Dyck.

The outstanding amount of coin certificates on the 1st of July was $30,489,640 against $23,540,720 on June 1st; $16,307,200 on May 1st; $21,672,500, April 1, $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $2,128,760, and retired $1,919,169 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during June, reached $13,593,420.

Government revenues have been yielding quite liberally, for midsummer, since our last. The excises, last week, yielded about $8,149,715; customs at the port of New York, $2,004,169, and at the outports about $650,000 (in coin) more, making the grand total income for the week equal to about $11,799,197 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, during the fiscal year, ending with June 30, 1869, were $158,287,177. The customs yielded, same time, about 182 millions in gold. The miscellaneous revenues of the fiscal year yielded about thirty millions, making a grand total income for the year ending with June 30, 1869 of about 370 millions. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 14 millions.

Gold has been in more confident speculative demand, and has been decidedly firmer, selling up to 137⅞ on Tuesday, though closing on Wednesday less buoyantly at 137@137⅛. The customs inquiry has been fair, while there has been rather more of an export call. The specie shipments last week reached nearly a million. Thus far, in the current week, the exports exceed half a million. The Sub-Treasury disbursed 3¾ millions of coin interest last week, and about two millions during the first half of the current week.

The following is the statement of the New York Gold Exchange Bank for the week ending Saturday, the 10th day of July, 1869:

Average am't of loans and discounts	$2,050,866
Average amount of specie	1,100,207
Average amount of deposits	2,431,756

The customs of the port on Wednesday yielded $329,000. The U. S. Sub-Treasury disbursed $651,392 of coin interest, on that day.

The customs demand for Gold last week, averaged $400,834 a day; thus far, this week, it has averaged $417,500 a day, or equal to a weekly aggregate of $2,505,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $3,160, and since Jan. 1, $9,597,838, against $3,958,431 same time in 1868. The receipts from California, since our last, have been $27,777. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to June 30, 1869 was $124,688,174, against $113,529,891 in the preceding fiscal year. At San Francisco, from Jan. 1, to June 30th, 1869, $3,391,393, against $3,699,865 same time last year.

The U. S. Treasury receipts from customs at all ports from July 1, to July 10, were about 4¼ millions.

The total receipts of California gold at this port, during the fiscal year ending with June 30, 1869, were $19,419,278, against $36,726,790 in fiscal year 1867-'68, showing a decrease in the last fiscal year, of $17,307,512. The exports of specie, from this port, last week, were $908,734, against $3,947,891 same week last year; total, since Jan. 1, 1869, $16,450,180, against $55,425,178 same time last year; and the total for the fiscal year ending July 1, 1869, $27,279,653, against $76,309,866 during the year 1867-'68. Government disbursed last week through the U. S. Sub Treasury here, on account of the coin interest on the public debt $3,382,000, and since Jan. 1, 1869, $55,770,509, against $54,077,367 same time in 1868; year ending July 1, 1869, $88,325,756, against $73,485,386 during the preceding fiscal year of 1867-'68. The specie exports from San Francisco, from Jan. 1, to June 30, 1869, were $21,046,229, against $19,937,491 same time in 1868.

A fair inquiry prevailed for foreign exchange, which has been held with more confidence. Bankers' prime sixty day bills on London closed tamely on Wednesday at 109⅜@110, and on Paris to 5.18¾@5.12½; sight bills on London to 110¼@110⅝, and on Paris to 5.12½c.@5.10¾. The offering of produce bills has been quite liberal this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $3,713,122, against $2,317,411 same week last year; total, since Jan. 1, 1869, $95,742,648, against $90,958,806 same time in 1868; and for the fiscal year ending with June 30, 1869, $172,815,331, against $179,085,149 in preceding fiscal year of 1867-'68.

Government securities have been more active and have advanced materially in price, especially since early on Monday, when Secretary Boutwell announced through the Sub-Treasury that Government would receive offers of 5-20s to the amount of $3,000,000 each Wednesday to the close of July, in addition to the Sinking Fund purchases. The purchases of U. S. 5-20 bonds for the remainder of the month of July on public account as thus announced will be as follows:

Wednesday, July 21	$3,000,000
Wednesday, July 28	3,000,000
Thursday, July 29	1,000,000
Total	$7,000,000
Previously bought in July	11,000,000
Total for July	$18,000,000

On Friday, July 9th, the Treasury purchased, for the Sinking Fund, $3,000,000 United States 5-20s of the various issues, at rates varying from 116.97@117.50, for the principal of the bonds—the accrued interest in gold since the last dividend being settled in favor of the seller as a separate transaction. The sum total offered was $5,126,000. On Wednesday, 14th, the amount offered aggregated $9,000,000, and purchases were made at 120.05@120.38.

The general market closed strong and buoyant.

U. S. sixes of 1881 closed here on Wednesday at 120⅞@121; U. S. Five-twenties of 1862, ex-coupon, 124@124⅛; U. S. Five twenties of 1864 at 121⅞@122; U. S. Five-twenties of 1865 at 121⅞@122; U. S. Five-twenties of 1865, consolidated, 120⅝@120¾; U. S. Five-twenties of 1867, 120¾@120⅞; U. S. Five-twenties of 1868, 120⅝@120⅞; U. S. Ten-forties at 110½@110¾; U. S. Six per cent. currency bonds, 107⅜@107⅝.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	June 30.	July 7.	July 14.
Consols	92⅞@93	93⅛	93¼
U. S. 5-20's of 1862	80¾	81⅝	81⅞
Erie	19½	19⅛	18¾
Ill. Central	95	95½	95¾

There has been more movement in railway and miscellaneous share property at generally much stronger prices. State bonds have been unusually variable, but close, firm and buoyant.

Business in domestic produce has been fairly active for the season. Breadstuffs close more firmly. Middling upland cotton closed rather heavily on Wednesday at 34¼ cts. per lb. The stock of cotton now here is estimated at about 17,500 bales. The receipts at the port this week, have averaged about 700 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,294,000 bales, against 2,321,000 bales same time in 1867-8; exports, same time 1,428,500 bales, against 1,691,000 bales same time in 1867-'8; stock on hand at latest dates, 50,000 bales, against 82,500 bales same date 1868. Total crops of 1867-'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 14,853 pkgs., against 13,705 pkgs., same time last year. From Boston, 5,757 pkgs., against 6,183 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in good demand, at from 12@16c., per lb.; week's receipts, 6,396. Milch cows, dull at from $40@$110 each, receipts, 93. Veal calves in moderate request at from 6@13c. per lb.; receipts, 2,696. Sheep and lambs at from 4¾@7½c., and 9@11c. per lb.,; receipts, 23,614. Swine in less demand at from 9@9¾c. per lb.; receipts, 33,686.

Foreign merchandise has been in moderate demand. Groceries have been quoted stronger. Dry goods, firm. Metals, depressed. The total imports of foreign dry goods, last week, were $1,110,046, and the total amount marketed $814,973. The value of foreign general merchandise imported last week, was $3,060,166—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $4,170,212, against $4,363,244 same week last year; total, since Jan. 1, 1869, $166,537,190, against $128,959,843 same time in 1868; and fiscal year ending July 1, 1869, $285,447,842, against $237,712,435 during the preceding year of 1867-'8.

Ocean freights have been quite active and generally firm. For Liverpool we quote flour at 2s. 1½d.@2s 3d. by sail, and 2s. 6d.@2s. 9d. by steamer, per bbl.; grain at 8d.@8¼d. by sail, and 9d.@9¼d. by steamer, per bushel; cotton at $\frac{5}{32}$@$\frac{5}{16}$d. by sail, and ¼@$\frac{5}{16}$d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 25s.@40s. by

steamer, per ton. Total number of vessels in port on Wednesday, 458.

The New York exports, exclusive of specie, for the week ending July 13, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$2,317,411	$3,713,122
Prev. reported	88,641,395	92,029,526
Since January 1	$90,958,806	$95,742,648

The imports for the week ending July 10, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,280,470	$1,110,046
Gen. merchandise	3,082,774	3,060,166
Total for the week	$4,363,244	$4,170,212
Previously reported	124,596,599	162,366,978
Since January 1	$128,959,843	$166,537,190

The balance in the Sub-Treasury on Wednesday was $94,311,126 82.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—South Carolina 6s, new, 66⅛; Alabama 8s, 93½; Michigan 7s, W. L., 101; Louisiana 6s, 68½; do., 6s, Levee bonds, 66; do., 8s, Levee bonds, 85; N. Y. State 7s, Bounty Loan, reg., 108; do., coupon, 108; Georgia 6s, 83; do., 7s, 90; Brooklyn 6s, W. L., 93½; do., Park Loan, 91¼; Toledo, Wabash and Western consol. bonds, 82; Ohio and Miss. consol. bonds, 82¾; N. Y. and N. Haven 6s, 96; St. Louis and Iron Mt. 1st mort., 85; New Jersey Central new bonds, 100¼; Toledo, Peoria and Warsaw 1st mort., W. D., 83¾; Central Pacific 6s, 98½; Norwich and Worcester R. ☞ The Baltimore and Ohio Railroad Company have taken charge of the Sandusky, Mansfield and Newark Railroad, and hereafter that road will be known as the Lake Erie division of the Baltimore and Ohio Railroad.

☞ A machine has recently been patented for transferring railroad cars from one track to another without necessitating the running of the car several hundred feet backward or forward, as the case may be, and without the use of switches.

Illinois Central Railroad.

The statement of this Company for the month ending June 30, 1869, is as follows:

LAND DEPARTMENT.

Acres Construction Lands Sold	5,157.51 for	$50,296 34
Acres Int. Fund Lands sold	79.32 for	820 10
Acres Free Lands sold	1,009.52 for	14,172 76
Total sales during month of June, 1869	6,246.35 for	$65,289 20
To which add Town Lot Sales		435 00
Total of all	6,246.35 for	$65,724 20
Cash collected in June		$187,351 18

TRAFFIC DEPARTMENT.

Receipts from Freight		$390,796 00
do. Passengers		134,800 85
do. Mails		6,358 33
do. Rent of Road		4,000 00
do. Other Sources		80,000 00
Total Receipts in June, 1869		$615,955 18
Total Receipts in June, 1868		$543,018 60

Estimated earnings in the month of June, on the D. & S. C. R. R., not included above: $124,993 80
Corresponding month of 1868: $83,271 38

S. A. Martine & Co.

The immense impetus and activity given to the Car building interests during the past year by the wants of the Union Pacific, and the constantly increasing new Railroads which are so rapidly developing the prosperity of the country, have led to great improvements in the interior arrangements of passenger Cars in the varied styles of trimming, etc.; and Car builders, and the Railroad community generally, would do well to notice the advertisement of the old established House of S. A. Martine & Co., in our advertising columns.

This Firm is one of the oldest in their line of business, are favorably known among railroad men, and in their large stock can be found every variety and grade of the standard goods in use in lining and trimming Railway Cars.

Their experience of over 25 years in the importing and selling of Car Linings has given them great facilities for procuring goods to suit the wants of the trade, and their extended business acquaintances enable them to present at all times a stock from which the most extensive purchasers can make a selection at the closest market rates.

☞ The Chestertown (Md.) *News* says that the grading of the Kent County Railroad will soon be completed to Kennedyville, and that the Board of Directors, of which Hon. Geo. Vickers is President, are looking to the early purchase of sufficient iron to lay the road to that point.

☞ At a meeting of the stockholders of the Chicago, Pekin and Southwestern railroad in Washington, Yazewell Co., Ills., on the 29th of June, a board of directors was elected with B. S. Prettyman as President, J. McDonald Secretary, J. W. Dougherty, Treasurer, A. C. Titus Chief Engineer.

☞ At a meeting of the stockholders of the Dubuque, Plattville and Milwaukee railroad company at Plattville, Wis., on 22d ult., a board of directors was chosen with H. Robbins as President; S. Moore, Secretary and Treasurer; Geo. W. Cobb, Superintendent.

Commerce of New York.

The foreign imports at New York for the month of June, 1868 and 1869, are officially stated as follows:

	1868.	1869.
Entered for consumpt'n.	$8,786,471	$10,510,444
Do. for warehousing	10,063,867	12,380,145
Free goods	783,149	1,277,514
Specie and bullion	838,111	914,005
Total entered at port...	$20,471,598	$25,082,108
Withdrawn fr. wareh'use	6,658,943	7,604,230

The foreign imports at New York for the six months from January 1, were:

	1868.	1869.
Entered for consumpt'n.	$58,924,841	$80,655,474
Do. for warehousing	59,723,073	73,110,314
Free goods	4,954,049	7,872,471
Specie and bullion	4,038,900	10,011,260
Total entered at port..	$127,640,863	$171,649,519
Withdrawn fr. wareh'se	51,922,215	52,987,225

The foreign imports at New York for the fiscal year ending June 30, were:

	1868.	1869.
Entered for consumpt'n.	$121,493,242	$149,467,646
Entered for warehouse.	106,408,721	117,994,646
Free goods	10,022,539	14,682,449
Specie and bullion	5,788,543	13,057,749
Total entered at port..	$243,713,045	$295,202,490
Withdrawn fr. wareh'se.	99,210,380	101,101,973

The following is a description of imports for the year ending June 30:

	1868.	1869.
Dry goods	$77,254,182	$88,131,658
Gen. mdse.	160,670,320	194,013,083
Specie and bullion	5,788,543	13,057,749
Total imports	$243,713,045	$295,202,490

The revenue from customs at New York:

	1868.	1869.
In June	$7,678,200 69	$8,411,294 83
Add 5 months	47,772,547 96	55,056,115 11
Six months	$55,450,748 65	$63,467,409 94
Fiscal year	110,182,050 09	121,313,373 91

The exports from New York to foreign ports in the month of June, were:

	1868.	1869.
Domestic produce	$10,634,544	$16,555,107
Foreign free goods	32,946	59,001
Do. dutiable.	641,409	605,608
Specie and bullion.....	11,823,628	2,335,531
Total exports	$23,132,527	$19,555,247
Do. exclusive of specie.	11,308,899	17,219,716

The exports from New York to foreign ports for six months from January 1, were:

	1868.	1869.
Domestic produce.....	$79,101,312	$81,792,169
Foreign free goods	404,249	156,870
Do. dutiable	3,909,473	3,323,094
Specie and bullion.....	49,103,600	15,451,893
Total exports	$132,518,634	$100,724,026
Do. exclusive of specie	83,415,034	85,272,133

The exports from New York to foreign ports for the fiscal year ending June 30, were:

	1868.	1869.
Domestic produce.....	$166,163,863	$158,766,435
Foreign free goods	553,666	353,545
Do., dutiable	7,840,890	6,803,221
Specie and bullion	76,309,886	37,189,892
Total exports	$250,868,305	$203,113,093
Do. exclusive of specie.	174,558,419	165,923,201

☞ Cars commenced running on the Cooperstown railroad between Cooperstown and the junction with the Albany and Susquehanna railroad on the 12th inst.

The Overland Road Through British North America.

Mr. Alfred Waddington has just published, as a supplement to his recent *brochure* on this subject, an interesting sketch in detail of the proposed line according to his views, and by the last mail we received the report of Mr. S. J. Dawson, who has been employed by the Canadian Government to explore the route by which the best line of communication across the continent can be made. With these two papers before us we have the means of arriving at a conclusion in regard to the perfect feasibility of such a communication being opened up.

Mr. Dawson decides that for the present the only means of easy access to the Red River settlement from Canada, within the financial means of the country, must be mainly by water, the connection, however, between the line of navigation and the head of Lake Superior on the one hand and the Red River settlement on the other being made by railway. Thus the route is divided into three different sections, which may thus be stated:

	Miles.
From Lake Superior to the eastern extremity of the waters which are to be made navigable	40
Waters now partially navigable which are to be made navigable throughout their length, extending westward to the north-west angle of the Lake of the Woods	311
From the Lake of the Woods to Fort Garry...	90
	441

The whole may be summed up, therefore, into 130 miles of railway and 331 miles of navigation. The first railway, and the shortest of the two, is that at the eastern end of the route, and on Lake Superior its terminus is intended to be at the head of Thunder Bay. Thence it is to strike the height of land or water-shed between the streams which flow eastward by Lake Superior and the St. Lawrence to the Atlantic, and those which flow westward by Lake Winnipeg into Hudson's Bay. The summit of this plateau is just on the eastern side of a large basin known as Lac Mille Lacs, and seventy miles of broad and deep navigation could be made by connecting the waters of a series of lakes which are found on the plateau. The country between them and Lake Superior over which the railway of 40 miles must pass is very rocky and difficult; but it is believed that an available line has been found by striking the Matawan River and following its valley up to the place where it is proposed to make a dam, so as to raise the waters of one of the lakes of the series already mentioned. The method of adapting these lakes to the purposes of a continuous navigation is discussed at some length, but the subject is entirely technical, and the opinions expressed are, moreover, to a great extent provisional. A gully runs through the ridge of about 50 chains in width, which separates the eastern from the western waters, and this, it is believed, may easily be excavated to sufficient depth to serve as a canal. The passes in the dividing region vary in height from 840 to 1,110 feet above the level of Lake Superior, following the watercourses; but the general elevation of the country is considerably greater, and the summit of the dividing ridge being only forty-five miles from Lake Superior at Pigeon River and seventy from Thunder Bay, the waters have the course so rapid as to make it impossible to fit them for navigation, except at an expense which present circumstances will not warrant—hence the recommendation of a railway. On the western side of the water-shed, on the contrary, the descent of the waters is very gradual; the difference in levels between Lac des Mille Lacs and the western extremity of the Lake of the Woods being only some 450 feet in three hundred miles. Between the height of land and Rainy Lake, the lakes are so numerous and so large as to make it difficult to say whether land or water predominates. Hence the facility for making a good navigation through them. From the foot of Rainy Lake to the western side of the Lake of the Woods there are but two small rapids, easily overcome, to interrupt the navigation. At this northwest angle of the Lake of the Woods it is proposed that the second railway should begin. The country over which it is to run to Fort Garry is said to be low and level, swampy, but at the same time quite practicable for railway purposes. All this work cannot, Mr. Dawson says, be done for many years to come. In the meantime, he would make a good wagon road to the waters of the dividing plateau, improve the navigation as well as it can be rapidly done, and make another wagon road from the Lake of the Woods to Fort Garry. With regard to a future continuous railway from Canada to Fort Garry Mr. Dawson says that there are two necessary conditions which must be kept in mind: First, that it must be carried far enough to the north of Lakes Huron and Superior to keep clear of the rugged country lying on the coast of those lakes, and must also pass north of the Lake of the Woods. But no road answering these conditions could touch Lake Superior at any place west of Nipigon Bay, so that it must be understood that the advantage claimed for the railway which is to start from Thunder Bay has reference only to a connection to be made with the interior navigation. The detour to the north of Lake Superior, which will be necessary in order to place the railway upon practicable ground, is stated at from thirty to fifty miles from the coast. Mr. Dawson speaks of it as very doubtful whether the best method of continuing the route westward from the Red River settlement to the Pacific will be by railway or by water, for which latter course ample facilities are offered by the abundance of lakes and rivers which exist east of the Rocky Mountains. The country, he says, is well adapted for railroads between Red River settlement and the Saskatchewan and Arthabaska Rivers. But after passing the summit of the Rocky Mountains through some of the passes, the country becomes one sea of mountains, though explorers have persevered until they have discovered a possible line of route. But till the country is better known, nothing can be done beyond pointing out the probable course of such a road. If the Arthabaska Pass were adopted, which Mr. Dawson thinks likely, a railway from Edmonton House, on the Saskatchewan, to Bute Inlet, on the Pacific, would be 654 miles in length. From Montreal to Bute Inlet the distances are set down thus:

	Miles.
Montreal to Fort Garry.....	1,367
Fort Garry to Edmonton House over the prairies.....	825
Edmonton House to Bute Inlet	654
	2,846

The course would be by the Ottawa River, and its tributary the Montreal River, to the 82d deg. of western longitude, from thence north west to the outlet of Lake Nipigon, where it would join the line above suggested. The line might be tapped by the extension of the Toronto and Nipissing Railroad.

Mr. Dawson says that there is something grand and vast in the idea of a railway thus crossing the country, and forming a highway for the trade of India and China. But it is proper to count the cost; and for the purpose of showing what that cost may be like, he quotes from Mr. Sandford Fleming substantially as follows:

The construction of 2,000 miles of railway implies the performance of laborers' work sufficient to give employment to 10,000 men for five or six years, the delivery of 5,000,000 cross ties and over 200,000 tons of iron rails for the permanent way, the erection of 50,000 poles hung with 1,000 tons of wire for the telegraph, the creation of motive power equivalent to over 50,000 horses, concentrated in 400 locomotives. It involves the production of from 5,000 to 6,000 cars of all kinds, which, coupled with the locomotives, would make a single train over 30 miles in length. And it implies a gross expenditure of not less than $100,000,000.

For operating the line, the fuel required each year would exceed 200,000 cords of wood. For

keeping the road in repair, a regiment of 2,000 trackmen would be employed; there would on an average be annually required 600,000 new cross ties, as well as nearly 30,000 tons of new or re rolled iron rails. The annual repairs of rolling stock would not cost less than one million of dollars. Over 5,000 employees of all kinds would be under pay and not far short of 20,000 souls subsisting by the operation of the road. The aggregate amount of wages in each year would swell out to nearly $2,000,000, while the gross expenditure would annually exceed $8,000,000.

If to the last sum be added the interest on first cost, it becomes evident that unless he gross earnings of the railway in each year come up to the enormous sum of $14,000,000, it could not pay interest on the capital.

By combination of railway and water communication, navigation might be made continuous from Fort Garry by way of Lake Winnipeg and Saskatchewan, a distance of 1,060 miles to Edmonton House, which is only 500 miles from the Pacific, which distance might be surmounted by a railway 654 miles long, or, using the Upper Fraser River, by a railway of 532 miles, and 309 miles of water. This method, which is quite practicable, would give an uninterrupted navigation from a point 40 miles west of Lake Superior to the base of the Rocky Mountains.

Mr. Dawson goes, at great detail, into estimate of the expense, which, especially as to details, must be in a great degree merely guess work. The summary, however, of the whole is as follows:

40 miles railroad, Lake Superior to navigable water of interior	$1,600,000
311 miles of continuous navigation, improved by locks and dams	1,500,000
90 miles railroad, north-west angle Lake of the Woods to Fort Garry	2,700,000
Total	$5,800,000

Mr. Dawson also estimates the probable cost of transport, and compares it with the cost by way of St. Paul's as follows:

94 miles railroad, Toronto to Collingwood, at 12¼ mills a ton per mile	$1.13
534 miles by lakes, from Collingwood to Fort William, at 2 mills per ton a mile.	1.07
40 miles by rail from Fort William to navigable waters of interior section 17 mills per ton a mile	0.68
311 miles lake and river navigation, from terminus of Lake Superior Railroad to the north-west angle of Lake of the Woods, at 4 mills per ton a mile	1.25
90 miles rail, north-west angle to Fort Garry, at 15 mills per ton a mile	1.35
1,069 miles. Total	$5.35

The distance from Toronto to Fort Garry, by way of Detroit, Chicago, and St. Paul, is 1,572 miles, and supposing the railway communication to be complete, the cost per ton, reckoned at 12½ mills per mile, would be $19.65. Nothing could show more clearly the vast superiority of the Canadian line in point of natural advantges.

The report then goes on to mention the propriety of reserving land at several places for public works or for towns. For the latter the sites likely to be found best adapted are Fort Frances on Rainy Lake; Oak Point, and Fort Garry. He suggests also that a definite treaty for right of way should be made with the Indians to that part of the country which is still in their hands. The people are warlike and believe themselves masters of the country, and they are able, as well as willing, keenly to resent encroachments.

The discovery (says Mr. Waddington in his supplementary pamphlet to which we have referred) of a practicable route through the mountains of British Columbia was naturally the first step towards opening an overland communication. I have already explained how that difficulty was overcome; and now that the Hudson's Bay Company have accepted the proposal made to them by Lord Granville for the surrender of the North West territory, another obstacle, hitherto considered as next to insurmountable, has also been removed. The speedy accomplishment of this important measure, owing chiefly to the untiring efforts of the Canadian delegates and the good sense and energy of Lord Granville, can but encourage the writer to fresh perseverance in his efforts. The difficulties still to be grappled with are great, it is true, but the worst it is believed, have now been surmounted. The future of the Dominion, the development of its great resources, and the consolidation of its power depend on the opening up of a communication between Canada and the Pacific through the Red River settlement and the Fertile Belt. These will, therefore, now be quickly thrown open; the general confederation of British North America will naturally follow; and the lately so-called impossible project of an overland railroad (which, when accomplished, will make Canada the emporium of the trade of Europe with China and Japan) may be looked upon ere long as a simple question of pounds, shillings, and pence. I am aware that the sum required (thirty-two millions, including interest till the road becomes self-paying) appears at first something enormous; but the applications to Parliament this session for bills relating to railroads in the United Kingdom alone (where any new line of railroad seems almost impossible) amount to more than sixteen millions, or over half that sum, with the chance of much smaller returns. With the enlightened assistance of the Canadian Government by liberal grants of land, and a properly guarded system of guarantee, by means of which the credit of the Dominion might in the first instance be made available—especially if endorsed by the Home Government—subscription lists to the above amount could be easily covered. The Government guarantees in India amounted, April 1, 1867, to a much larger sum, 67,254,802*l.*, and they have been a complete success, as every one in financial circles is aware of. Besides, by providing for the payment of the interest the above guarantee will be rendered almost nominal.

The Central Pacific Railroad across the American continent has just been opened. Its professed purpose is to transfer the Old to the New World, and when the commercial fate of England is trembling in the balance, the urgent necessity of a rival route of our own, independent of foreign regulations or tariffs, can no longer be disguised or the question lightly postponed. What the writer has so long been striving to orward will soon become the question of the day; and if, as some pretend, Englishmen can only act vigorously when fairly aroused, that day may not be far distant—when we shall set to work in good earnest to carry out this truly great and national undertaking and make up for lost time.—*Canadian News.*

Mississippi River R. R.

At the recent annual meeting of this company in Memphis, Tenn., the following directors were chosen: A. S. Mitchell, Wm. B. Greenlaw, A. T. Lacey, Dr. A. H. Kerr, John T. Douglas, Wm. H. Wotten, D. M. Henning, Dr. A. Harris, and C. N. Gibbs. The Board organized by the re-election of its old officers, viz.: A. S. Mitchell, President; A. T. Lacey, Vice President; Wm. H. Cherry, Treasurer; Isaac Morrison, Secretary; Thos. H. Millington, Chief Engineer. All these officers live in Memphis.

☞ Proposals will be received for the grading, bridging and masonry of the Mount Holly, Lumberton and Medford Railroad, at the Engineer's office in Mount Holly, Burlington county, New Jersey, until the 19th of July.

☞ James F. Joy has been chosen President, R. S. Watson Secretary, and Amos T. Hall Treasurer of the Leavenworth, Lawrence and Galveston railroad company.

Grand Rapids and Indiana Railroad.

There are now forty three continuous miles of this road completed, viz., from White's Plaster Mills, three miles south of Grand Rapids to a point forty miles north of Grand Rapids, and about fifteen miles south of Big Rapids, the county seat of Mecosta county, a thriving town on the Muskegon river.

In addition to the twenty miles of iron laid from Grand Rapids to Cedar Springs in 1867, iron for fifty-one miles of track was bought a year ago, and twenty-seven miles of it is yet unlaid. The road will be completed to a point five miles north of Big Rapids during this year. The completed road will then have earned an absolute title to about 112,000 acres of the land grant. There is also one mile of iron laid at Kalamazoo, and the greater part of the line between Kalamazoo and Grand Rapids, 49 miles, is ready for iron. From Fort Wayne to Kalamazoo, 92 miles, the principal work to be done is between Fort Wayne and Kendallville, and there is nothing in the nature or condition of the work to prevent the road being opened from Fort Wayne for two hundred miles before the first day of January next, by which time the Cincinnati and Indianapolis line, *via* Muncie, will be open for business. The lumber which will rapidly accumulate on the sixty miles north of Grand Rapids will find its principal market at Fort Wayne, and on the lines of railway uniting with Fort Wayne, and every consideration of interest, therefore, calls for the opening of the road to Fort Wayne at the earliest possible day. The public expectation demands it, and we are assured that its completion here this year is fully determined upon.

The line of the Grand Rapids and Indiana road is the shortest from Grand Rapids to Fort Wayne, and will draw to it a good share of the east bound trade and travel of Western Michigan up to Travers Bay and Mackinaw; and it is this fact which has made the east and west roads across Michigan hostile to the Grand Rapids and Indiana road, and stimulated the efforts of the Michigan Central Company to cripple and destroy it; but sustained by the interest and strength of the Pennsylvania Railroad Company, it will soon become a new element and power in the railway system of Michigan, and prove of immense value to that State, especially in the development of the western part of it north of Grand Rapids.—*Fort Wayne Gazette.*

Allentown and Auburn Railroad.

Work has been resumed on this road, and that part of the road which extends from Topton station, on the East Pennsylvania Railroad, to Kutztown, will soon be finished. Work has been resumed also between Kutztown and Hamburg, and between Hamburg and Port Clinton. When this road is finished, it will afford the nearest route from New York to the Pennsylvania coal fields and the West.—*Bethlehem Times.*

☞ The Somerset (Me.) *Reporter* says that the Portland and Kennebec Railroad Company have made arrangements to have engineers make a working plan for a railroad from Patterson bridge in Anson to Solon, preparatory to putting on working parties at once.

☞ It is expected that twenty additional miles of the Flint and Pere Marquette railroad will be completed before the close of this year.

☞ The Mount Washington railroad has been completed, and the cars now run to the top of the mountain.

☞ Ground has been broken at Windsor Locks, Conn., for the Suffield Branch of the Hartford and New Haven Railroad.

☞ P. H. St. Andrews has been appointed Superintendent of the New London Northern railroad.

Tide-Water Receipts.

The quantity of flour, wheat, corn and barley left at tide water from the commencement of navigation to the 30th ult., inclusive, during the years 1868 and 1869, was as follows:

	Flour, bbls.	Wheat, bu.	Corn, bu.	Barley, bu.
1868..	90,600	4,339,000	4,919,000	326,400
1869..	78,700	4,106,100	1,403,100	11,800
Dec.	11,900	232,600	3,515,900	314,600

By reducing the wheat to flour, the quantity of the latter left at tide-water this year, compared with the corresponding period last year, shows a decrease equal to 58,420 bbls. flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide-water from the commencement of navigation to and including the 30th of June in the years indicated:

	1867.	1868.	1869.
Canal opened—	May 6.	April 23.	May 6.
Flour, bbls.....	14,500	90,600	78,700
Wheat, bushels...	128,500	4,339,000	4,106,400
Corn, bushels....	1,449,200	4,919,000	1,403,100
Barley, bushels..	28,800	326,400	11,800
Oats, bushels....	606,500	3,211,800	980,400
Rye, bushels.....	88,500	159,400	182,100
Malt, bushels....	47,000	150,900	87,400
Feed, lbs.....	.....	.....	1,285,000

The figures for 1868 cover 45,200 bbls. flour, 2,811,500 bush. wheat, 694,500 bush of corn, 321,700 bush. barley, 104,100 bush. rye, 941,900 bush. oats, 43,300 bush. malt, estimated to have been detained on the canal by ice during the winter of 1867 and 1868.

Journal of Railroad Law.

RAILROAD COMPANIES—OBLIGATION TO MAINTAIN FENCES—EXEMPTION BY CHARTER WHEN ROAD IS CONSTRUCTED IN RIVER—WHAT CONSTITUTES THE "RIVER."

The facts of the late case of Schermerhorn *vs.* The Hudson Railroad Company, (38 N. Y., 103,) are fully and clearly stated in the following opinion by

WOODRUFF, J.—This appeal is from a judgment of the Supreme Court in General Term, in the third district, reversing a judgment for the plaintiff, rendered by a justice of the peace, and affirmed by the County Court. The action was prosecuted before the justice for damages for the killing of the plaintiff's cattle by the defendants' negligence. The alleged negligence consisted in not maintaining fences along the defendants' road where it passes between Schodack Island and the main land. The island is near the easterly shore of the Hudson River; the water on the easterly side of the island is called Schodack Creek, and is the water separating the island from the main shore. The defendants' road passes through and in this water, where it is of a width of 300 to 500 feet, and in depth from two to ten feet, varying with the tide. The evidence tended to show that the plaintiff's cattle, in June, 1853, were at pasture on Schodack Island, and from there forded or swam the intermediate water to the railroad track, and were injured.

The plaintiff had judgment before the justice, which was affirmed by the County Court. On appeal, the Supreme Court in the third district reversed the judgment, and the plaintiff appealed to this Court.

No opinion was pronounced in the Supreme Court, and the grounds of reversal are not stated us. There were numerous exceptions taken on the trial, but I do not deem it necessary to examine more than one question, and on that I think the reversal was right, and the judgment of the Supreme Court should be affirmed.

The charter of the company (Laws 1846 p. 282, § 24,) relieves the defendants from any obligation to maintain fences "where their railroad is constructed in the river," and yet their omission to fence their road in the water opposite Schodack Island is the sole neglect of duty imputed to them.

The general railroad act (Laws of 1848, p. 236, § 42,) requiring corporations formed under the act to erect and maintain fences on the sides of their road * * * with openings and gates therein, and farm crossings of the road for the use of proprietors of *lands* adjoining such railroad, which, by section forty-six, is applied to existing railroads "so far as applicable to their present conditions, and not inconsistent with their charters," does not, I think, alter the charter of the defendants, so as to require them to fence their road where it is constructed in the river.

Within the fair meaning of the charter, the water through which the road was constructed at the place of the accident, was the river, and the exemption from the duty to fence the road was applicable.

There are in the river, in the vicinity of the place of the accident, several islands breaking up the waters of the river into many channels or strips of greater or less depth. The waters are thereby spread to a greater width, but these waters are, nevertheless, the waters of the Hudson River flowing downward in their course to the sea. It is not the main channel alone which constitutes the river; the water of the river surrounds the island, and for convenience, the different channels may have received different names, but they are the river still. Indeed, the term "creek" itself properly imports a recess, cove, bay or inlet in the shore of a river, and not a separate or independent stream, though sometimes used in the latter meaning.

Here, the waters so designated do, I think, plainly constitute a part of the river itself, as Schodack Island and the several other islands in the vicinity are islands in the Hudson, and a strip of water dividing the islands, or separating an island in the river from the main land, and the spreading waters at the mouth of streams flowing into the Hudson River, are "the river," within the meaning of the charter, as they are plainly within its spirit and intent.

On this ground I think the defendants were not liable, and that the judgment of the Supreme Court, reversing the judgment of the justice, should be affirmed.

Judgment affirmed.

COMMON CARRIERS BOUND TO ACCOUNT TO CONSIGNOR FOR LOSS OF GOODS—NEGLIGENCE—LOSS BY FIRE.

A very important decision was recently rendered by Judge Brady in the Court of Common Pleas, in the case of Lamb *vs.* The New Jersey Transportation Company, in respect to the liability of common carriers in cases of loss by fire. The following opinion will be found full of interest to the community at large:

BRADY, J.—The defendants are not, by the contract of carriage, to be responsible for a loss by fire, unless it can be shown that it resulted from their negligence or want of care. This condition of liability was enforced in terms on the trial. The defendants were held not to be responsible unless it satisfactorily appeared that they were guilty of negligence, by which the loss was occasioned. Whether the plaintiff is to make out a *prima facie* case in the first instance, is not stated by the contract itself, and the natural order of proof would be for the plaintiff to show the delivery to the carrier, and his failure to carry and deliver as undertaken by him, and by way of answer to any explanation of the loss by him, to further show that it resulted from his negligence, notwithstanding the explanation. There is nothing in the contract hostile to this form of procedure, or in conflict with it. The carrier is to be liable only for negligence resulting in loss, when the loss is occasioned by fire. This is a condition imposed by him—this the limit within which he restricts the common law liability which would otherwise exist, and when fairly considered with reference to that common law liability thus restricted, it means "upon a fair and full consideration of all the facts attending the loss, if it appears that I was negligent, and that such negligence resulted in the destruction of your property, I will pay you the damages, to be ascertained as agreed upon." It would be a severe exercise of judicial power to hold that the consignor must give evidence not only of the cause of the loss, but the details attending it, and be also required to establish from such details the want of such care on the part of the carrier as he was called upon to exercise under his engagement in respect to the property carried. Such a duty should not be imposed unless there can be no doubt that such was the intention of the parties, and for the reasons, first, that the circumstances attending the loss are more within the knowledge of the carrier, and information on the subject more accessible to him than the consignor; and, second, because the carrier is *prima facie* liable if he fail to deliver, and any limited responsibility being for his especial benefit, he should have the burden of bringing the loss complained of within the exception to his general liability. The defendants in this case were required, in answer to the plaintiff's demand, to bring themselves within their excepted liability, and this was a proper construction of the terms of carriage. I agree with Judge Daly, therefore, in his conclusions upon that branch of the case. It must be said in addition, however, that the defendants did not rest upon their proposition that the plaintiff must show them guilty of negligence. They excepted to the denial of the motion to dismiss the complaint, it is true, but they proceeded nevertheless to show the cause of the fire, and all the circumstances calculated to relieve them from the charge or suspicion of negligence. The plaintiff responded to the case made by such evidence, and the issue on that subject was fairly considered, and passed upon adversely to them. The proof having thus been given on both sides, the refusal of the Judge at the trial to compel the plaintiff to establish a *prima facie* case of negligence against the defendants, resulted and is to be regarded merely as an inversion of the order of proof, which could not operate to the prejudice of the defendants. The circumstances under which the fire took place, its

cause and consequences, as already suggested, must be supposed to have been more within the knowledge of the defendants than the plaintiff, and the evidence on the trial shows that such supposition was entirely justifiable. Such facts and circumstances would necessarily present the defence or the conclusion based upon them, if proper, that the defendants were not guilty of negligence. It may be said in answer to this view, that the plaintiff might not have been able to show that the defendants were guilty of negligence in opening his case, but the fact that he rebutted the defendant's case made on that subject, and was allowed to go the jury upon the answer made to it, shows that such a conclusion could not be properly entertained. We have the whole case before us, and it does not appear that the inversion of the order of proof assuming such an incident to have occurred, prejudiced the defendants in any manner. They had the opportunity to present their case fully, and seem to have done so, and the jury found against them. For these reasons, and those assigned by Judge Daly on the other questions considered by him, the judgment should be affirmed.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known ; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

WILLIAMS, PAGE & CO.'S
PASSENGER CAR LAMPS
FOR KEROSENE OR COAL OILS.

Centre Lamps for High Roof Cars.

SIDE LAMPS AND SALOON LAMPS.

THESE Lamps, now in use on a large number of Railroads are very neat and ornamental, and being enclosed in a Brass Case which is firmly secured to the car, **entirely avoid the dripping of oil on Passengers and Car Cushions.**

The Light is very strong and brilliant, **lighting up the Cars so as to give them that bright and cheerful appearance so much desired by roads for the pleasure and comfort of their Passengers.** These Lamps are strong and durable, and are as easily taken care of as any in use. A full sized drawing sent when requested.

The Saloon and Water Closet Lamp is the same form as the Side Lamp, but about half the size.

Manufactured and for sale by

CHANGE OF SAILING DAYS.

Steamers of the above line leave Pier No. 42 North River, foot of Canal street, at 12 o'clock noon,

On 1st, 11th and 21st,

except when those days fall on Sunday, then the day previous.

One hundred pounds baggage free to each adult. Medicine and attendance free.

July 21, HENRY CHAUNCEY, CAPT. SEABURY, connecting with GOLDEN CITY, CAPT. PARKER.

Steamer leaving July 10, connects closely with steamer OREGONIAN, leaving San Francisco Aug. 4, for China and Japan.

NOTICE TO SHIPPERS—Freight for steamer HENRY CHAUNCEY received until 4 P. M. on TUESDAY, July 20. All usual facilities afforded shippers in collecting inland charges, &c.

For freight or passage tickets and all further information apply at the Company's ticket office on the wharf, foot of Canal street. F. R. BABY, Agent.

Union Pacific Railroad.

The following letter was received by JAY COOKE & Co. from W. MILNER ROBERTS, a prominent civil engineer, and one of the commission sent out by JAY COOKE & Co., to examine a route for the Northern Pacific Railroad Company eastward from Puget Sound. In passing over the Union Pacific Railroad, he makes the following flattering report:

SALT LAKE CITY, June 18, 1869.

Messrs. Jay Cooke & Co.:

GENTLEMEN:—We arrived here yesterday morning by stage, twenty-eight miles from the railroad station "Deseret," changed the day we left Omaha to "Wintah," after a prominent range of snow mountains, in sight of which we were nearly all day of the 16th. The view of these snow-clad summits, standing at an elevation of eleven or twelve thousand feet above the sea, is both beautiful and grand.

The railroad from Omaha to Cheyenne, 516 miles is equal, in all respects, to the best of our first-class Eastern roads, and superior to most of them on account of its easy grades. On this whole distance the road is remarkably smooth, so that it is easier to write as the cars are going than on any railroad that I know of. Nearly the whole of it is ballasted with fine gravelly material. It is all prairie land, and all the way in the valley of the Platte River or its branches. At "North Platte," 291 miles from Omaha, the line takes the valley of the South Platte, and runs on the north side of it to "Julesburg," 377 miles from Omaha. Thence it follows the "lodge pole" fork of the South Platte to "Pine Bluffs," 475 miles from Omaha. It then passes across an easy "divide" over to the waters of "Crow Creek," another tributary of the South Platte, and descends to Cheyenne, 516 miles from Omaha. Omaha the starting point, is 760 feet above the sea; Cheyenne is 5,921 feet above the sea; so that the total rise is 4,961 feet in 516 miles, or an average of 9 6-10 feet per mile—the maximum rise for short distances being thirty-five feet per mile, excepting that in getting out from Omaha there is at present a grade of sixty-two feet per mile, which, however, on the completion of the bridge across the Missouri at Omaha, now in progress, will be reduced to about forty feet per mile, and which, occurring at an important city, is not of much moment. Practically the railroad from Omaha to Cheyenne is a straight line for 516 miles, with ruling grades below thirty feet per mile, and averaging about ten feet per mile. This entire distance is a grass country: but most of the way it may be cultivated, and produce Spring wheat, corn, potatoes, oats, &c. At present it is virgin soil, ranged over by antelopes, occasional Indians and emigrants, and latterly by the railroad, and now dotted with railroad villages about every fifteen miles, these villages as yet depending wholly on the railroad employes and the travel by rail, no local trade existing along the route till we reach the Cheyenne, where the stage road runs to Denver, 110 miles off.

As far as Cheyenne we were honored with the company of Ex-Secretary SEWARD and his family. At Cheyenne he was welcomed by a crowd and a band of music; and here he bade our party farewell, intending to proceed to Denver, and afterward to the Pacific.

Cheyenne bears somewhat the same relation to the passage of the Black Hills range of the Rocky Mountains that Altoona bears to the Allegheny range on the Pennsylvania Central Road; only, however, in this, that at Cheyenne the grade increases, and continues gradually increasing to the pass of the mountain at the summit at Sherman; the highest point attained by the railroad anywhere between the Atlantic and the Pacific Ocean—Sherman being 6,235 feet above the sea.

But here the resemblance ceases. The ascent of the Black Hills, from Cheyenne to Sherman, a distance of thirty-three miles, is entirely different from that on the Allegheny slope. In the thirty-three miles the rise is 2,314 feet, or an average of seventy feet per mile. But in attaining this easy ascent there is no heavy crest, no deep fills, the deepest cuts only about twenty feet, and no tunnels, and on the very top, at Sherman, it so happens that there is a slight depression, requiring an embankment about four feet high.

I watched this portion of the line critically all the way, although it was by moonlight, in company with DR. CLAXTON, looking from the hind platform of the hinder car, and I was particularly struck with the fact that there is little more work on these thirty three miles than on the route approaching Cheyenne from the east, and no appearance of a mountain ascent. Such is this remarkable pass.

In fact, it is not necessary that even this summit should be passed by the railroad, for the Laramie Fork, as well as the main North Fork of the Platte, cuts through the Black Hills, and could have been followed with regularly ascending grades, though no more circuitous and more costly routes. Where the line now crosses the Laramie west of the Black Hills, it is 7,123 feet above the sea, or 1,112 feet lower than the Sherman summit; and at the crossing of the North Platte, west of the Black Hills, it is only 6,477 feet above the sea, or 1,658 feet below Sherman.

These features are not generally understood by our people in the East. On the entire distance, 549 miles from Omaha to Sherman, on the highest summit passed between the two oceans, the work is absolutely trifling, the curves of the easiest kind, and the grades as above stated.

From the Sherman summit, descending the slopes of the Black Hills, the work is heavier and the grades somewhat undulating, the maximum descending grades being 86 feet per mile for about ten miles into the valley of the Laramie. The general range of the height of the grade above the sea, from the Laramie, crossing 23¼ miles west of Sherman to Green River, is from 7 000 to 6,000 feet in a distance of 274 miles, between Laramie and Green River, with no very heavy work at any point. At Green River the grade is 6,112 feet above the sea, and at the Aspen summit, 92½ miles further west, it is 7,463 feet. Aspen is the second highest summit on the Union Pacific Road, and is 772 feet lower than Sherman, at a point 939 miles from Omaha. At Deseret, or Wintah now, we left the cars to go over to Salt Lake City, 28 miles south of the railroad, by stage over a tolerably good road, which we passed in a little less than six hours, between 1 and 7 o'clock, on the morning of Thursday June 17.

I will not take time to write a description of this curious city, or of the little incidents attending our journey and stay here since yesterday morning. I prefer to generalize a little in connection with the Union Pacific Railroad, as far as we have passed over it.

It is a good, well-located and well-constructed railroad in most of the distance from Omaha to Wintah, 1,024 miles. From Piedmont west for about ninety miles, the track was hastily laid during the Winter, and at a number of points trestle-work still supplies the place of the more perman-

ent bridge structures which are in process of erection; but it will require only a short time and no large expenditure of money to make is as good as the best in the country. We made very good time over even the worst parts of it, with no extraordinary motion of the cars. I could take notes comfortably on the very roughest portions. I can have no doubt, therefore, (having been over all excepting sixty miles of the Union Pacific,) that the whole 1,084 miles will, in a very short time, be equal throughout to the best roads in the East.

Respecting the business to be done on these 1,084 miles, it is obvious that it must be almost wholly through travel and transportation. There can be no local trade or travel excepting what may come in from Denver, at Cheyenne, and from Salt Lake City, at Wintah, or that vicinity. Branch railroads will be at once constructed to both Denver and Salt Lake City. At all other points the only business must be such as arises from the working of the road—nothing more.

After some years the country between Omaha and Cheyenne will be settled and cultivated, and thus create local business; but beyond Cheyenne the nature of the ground is such that very little settlement can take place in the present age, a large portion of the distance being sage desert and alkali plains. Concerning the through trade and travel I am not yet prepared to speak.

As to snow, my opinion is, from the best data I have been able to gather, that the snow difficulty on the Black Hills, and on the Union Pacific line (1,084 miles) generally, has been greatly exaggerated in the newspapers, and that it will not prove to be so very formidable. Last Winter was, however, a favorable one; less snow than usual fell, and the railroad was obstructed for several weeks; but it is to be considered that the track was being constructed in the dead of Winter, and that there was not time to perfect all the appliances for guarding against the snow or for removing it from the cuts. There will be more or less trouble from snows every winter, doubtless; but I feel constrained to come to the conclusion that, with first class snow-plows and good management, the difficulty from snow between Omaha and Promontory Point will be little, if any, greater than on some of the New England railroads. All our party are well, and perfectly harmonious.

Very truly yours,
W. MILNOR ROBERTS.

Northern Pacific Railway.

That there is some earnestness in the recent revival of the Northern Pacific Railway project is proved by the arrival in this city on Friday last, of a party representing the company which has it in hand, who are charged with the duty of making a general examination of the country to be traversed west of the great north bend of the Missouri River. The party consists of Thomas H. Canfield, General Agent of the company, who was joined at Omaha, on his way thither, by W. M. Roberts, an able civil engineer from Pennsylvania; Wm. S. Johnson, an engineer lately in the service of the Lake Ontario Shore Railroad; Mr. Moorhead, of the firm of Jay Cooke & Co., which has taken a large interest in the company; Samuel Wilkeson, a literary gentleman, who will write up the general results of the exploration for the press, and Dr. Claxton. Mr. Canfield left Vermont for California on the 15th inst. He will start with his party for Portland, Oregon, and Olympia, Washington Territory, overland, this evening. The party will take a steamer at Olympia, examine the bays and harbor of Puget Sound and the Fuca Straits, and afterward proceed to Walla Walla, whence they will go northeasterly to the Cour d'Alene, and Pend d'Oreille Lakes, and up Clark's Fork of the Columbia to Montana, passing by Deer Lodge Valley to Gallaton City, Helena, and the Cadot and Mullen Passes of the Rocky Mountains. After examining these passes and exploring the upper portion of the Yellowstone, they will go down that river or the Missouri to the North Bend, near old Fort Clark, where they may be met by another party which has started from Lake Superior. The latter party consists of Gov. J. G. Smith of Vermont, President of the Western Pacific Railroad; Edwin F. Johnson, Chief Engineer of the company, and a number of other gentlemen connected with the enterprise.

We are informed that this party, after fixing the terminus of the road on Lake Superior, and making arrangements for the location and construction of the initial section, will proceed to Red River of the North, near Fort Abercrombie, and thence on to the Missouri River by Forts Ransom and Totten in Dakota, keeping close to the probable route of the road. Both parties will be escorted by Government troops wherever trouble with Indians is apprehended, and their reconnoisance will be preliminary to a thorough survey.—*San Francisco Bulletin, June* 28.

Mobile and Ohio Railroad.

The earnings of this road for the years ending December 31, 1867 and 1868, were as follows:

	1867.	1868.
From passengers	$742,580 49	$545,864 46
" freight	2,400,815 97	1,179,182 37
" mail	47,900 00	47,089 76
" express	109,050 00	78,465 00
	$2,300,296 46	$1,850,601 59
Expenses, viz:		
Repairs of roadway	$371,804 29	$327,704 16
" machinery	385,427 81	274,185 50
Conducting transp.	766,558 73	635,015 79
Taxes	.....	13,646 61
	$1,523,790 83	$1,250,552 06
Net revenue	$776,505 63	$600,049 53

Compared with the previous year the gross earnings show a decrease of $449,694 87, with a decrease in expenses of $273,238 77—making the decrease in net earnings, $176,456 10. The earnings per mile of road in 1867 and 1868 were as follows:

	1867.	1868.
From passengers	$1,528	$1,124
" freight	2,882	2,427
" mail and express	323	258
Totals	$4,733	$3,809

The earnings per mile run by trains were:

	1867.	1868.
By passenger trains	$2.45	$1.77
" freight trains	2.29	2.22
" all trains	2.34	2.03

No statement of rolling stock is given. At the close of 1867 the company had 28 passenger, 4 sleeping, 10 baggage and 799 freight cars; and there were trucks and iron work and other materials on hand for 94 box and 52 platform cars, which were nearly finished. The number of locomotives in use the past year was 71, against 74 in 1867. The mileage of trains was:

	1867.	1868.
Passenger	367,165	378,012
Freight	613,097	530,968
Gravel and repairs	186,944	161,516
Totals	1,167,204	1,070,496

The cost of motive power per mile run was as follows:

	1867.	1868.
Repairs of locomotives	0.287	0.107
Fuel	0.104	0.096
Pay of engineers and firemen	0.140	0.098
Oil, tallow, waste and cleaning	0.023	0.020
Totals	0.554	0.321

The movement of cotton from April 1, 1868, to March 31, 1869, in comparison with the corresponding period of the previous year, was as follows:

	1867.	1868.
Transported to Mobile	120,804	81,890
" Corinth	653	317
" Humboldt	15,571	22,601
" Jackson	54	12
" Columbus, Ky.	4,584	5,842
Total bales	141,666	110,662

Of the cotton grown in Tennessee there went to Columbus in 1868, 4,073 bales; to Humboldt, 8,773; to Jackson, 12; and to Mobile, 2,875—total, 15,733, against 13,556 in 1867. Of the cotton grown in Alabama and Mississippi, there was transported to Corinth in 1868, 603 bales; to Humboldt, 9,754; to Columbus, 814—total, 11,171, against 3,175 in 1867. Leaving out the shipment of compressed cotton from Mobile to Northern and Eastern cities, the increase in the northward movement has been 914 bales, or about 4½ per cent. of the crop of 1866. There was transported between the 1st September of that, and the 1st of April of the following year, 70,679 bales, and within similar dates of the crops of 1867 and 1868, 132,350 and 80,855 bales, which shows the decrease in the last crop in the country tributary to the road to be 51,465 bales, or about 38 per cent. The president in his report says:

During the past year, as is known to most of you, the crop of our great stapie was largely reduced, and seriously interfered with your receipts, which has been met by a reduction in expenses, so far as was practicable. While the cotton crop of the South has been a short one, the country tributary to the line of your road has suffered more, probably, than any other section. The canebrake of Alabama and the rich prairies of Mississippi, which have heretofore produced the largest bulk of cotton, were visited by the worm and by far the largest portion of the crop destroyed. The falling off in receipts at the port of Mobile amounting to 138,128 bales, shows the full state of the case. It will be seen that your receipts were 31,004 bales short of the preceding year. While the planter has found some remuneration by the enhanced price, the carrier has been left to the disappointment of his just expectations.

When it is remembered that the earnings of your road have hitherto been almost exclusively dependent upon agricultural products, and that cotton furnished the chief marketable surplus of those products, the influence of a failure of this crop will be more fully appreciated. The "infirmity," as it has sometimes been called of Southern roads is in progress of removal, by the diversifying of the pursuits of our people. The production of fruits and vegetables is being started on a more extended scale, while lumber is entering largely into your freight traffic. There is now in progress of construction or already in operation on or adjacent to the line of your road, more than 130 establishments propelled either by water or steam, for the manufacture of cotton, wool, iron, paper, flour, meal, lumber, wagons, brooms, shoes, sash, doors and blinds. The enterprising merchants of Mobile are turning their attention to direct importation from the West Indies, and with the most flattering prospects of success. A glance at the map must convince the most skeptical that the shortest, and consequently the cheapest route from the West Indies to the Western States of our Union, is through the Gulf ports. The magnitude of this trade can hardly be estimated, and must tend to a large increase of your earnings in the future.

It is a cheering fact that our people are meeting their altered condition with the determination to open new fields of enterprise and thus add to decreased cotton crops, other products of industry, which in the aggregate, will increase their wealth and happiness.

Your roadway has been placed in good order, and it is believed that less than the usual outlay will be required during the present year, while we

have rolling stock sufficient for all the requirements of the business, and which will be in order for the fall.

Your floating debt, has been reduced more than half a million of dollars during the past year—since which, it has been still further reduced and is still being diminished by daily payments. This incubus upon your earnings will it is believed be removed, by economy in expenses and strict application of receipts, at no distant day.

The funding of past due coupons has been going on steadily; the great portion of your creditors regarding it as much for their interest as for yours, while the interest on that portion due to the State of Tennessee has been promptly paid.

With all connecting roads our relations are of the most friendly character.

An arrangement has been made with the Mississippi Central Railroad Company, allowing them to run their trains on your road between Jackson, Tenn., and Humboldt, thereby enabling them to compete successfully for through traffic with New Orleans, which it is believed will prove advantageous to this company. The St. Louis and Iron Mountain road will be completed to Belmont, opposite Columbus, Ky., within the next 60 days. An arrangement will be made with that company to transfer freights without change of bulk, so that the same car that leaves St. Louis will come through to Mobile, and be returned laden with the products of the Gulf; when it is considered that this puts us not only in rail connection with the Western Empire, but forms a continuous rail line from the Gulf to the Pacific Ocean, its advantages must be appreciated.

The Vincennes and Cairo road is being prosecuted with energy, and may be regarded as a fixed fact; this road opens to us the rich valley of the Wabash, from which we have hitherto been excluded.

The City of Aberdeen has made an arrangement with the New Orleans, Jackson and Great Northern Railroad, by which the road is to be completed from that city to the line of your road at or near Loohatan, and this company has agreed to run it; the iron has been received, and this branch to your road will be completed in time for the fall business.

The Alabama and Chattanooga road, formed by a consolidation of what has been known as the North East and South West with the Wills Valley road, running from Meridian on the line of your road to Chattanooga, is now being built, and will be completed into the valley of the Black Warrior in time to secure the business of the ensuing fall. The advantages of this road will be appreciated, when it is remembered that its route is through the rich mineral regions of Alabama, thereby giving to your road a new and valuable traffic.

The New Orleans, Mobile and Chattanooga road is in course of completion, between Mobile and New Orleans; a large force is now engaged upon the work, and the assurance is given that before your next meeting, it will be completed to Mobile. This road when finished, in connection with yours to Meridian and the Alabama and Chattanooga road, will form the shortest route between New Orleans and the great cities of the East.

Your Directors believing that the greatest want of your country and company was to be remedied by the introduction of efficient laborers, and realizing the importance of having your lands sold to actual settlers, to which reference was made in the last report, have adopted vigorous measures to secure immigration, not only from Europe, but from the Western States of our own country. An arrangement has been made with an English gentleman, who has large facilities for placing lands in the hands of European immigrants, that promises success. An agent has been employed to visit the West for the same purpose. The advantages offered by our soil and climate, are being favorably regarded by intelligent farmers at the West. Some have already purchased and are now settling lands on the line of your road, and it is confidently expected that during the coming fall, there will be many more. These new settlers will form a nucleus through whom correct information will be disseminated, and must result in an increase of the producing power of our country and to the earnings of your road.

Notwithstanding the decreased earnings consequent upon the failure of crop, it is confidently believed that you can comply with the agreement made with the bondholders, by resuming interest payments on 1st May, next.

The almost entire failure of the cotton crop has demonstrated that your enterprise has large earning power from other sources, which are as yet but partially developed, and that with the increase of mechanical industry on or near the line, a remunerative business can be done, even in the absence of cotton; and should Mobile become as is now probable, the port of entry for the products of the West Indies destined for the West, your business must swell to large proportions. Forming as you do the great Trunk Line from the Gulf, you are prepared to meet and turn to advantage any of the important railroad enterprises of the day. Already you are in connection with the Union and Central Pacific to San Francisco, while the other and more southern routes by Cairo, Memphis, or Vicksburg, are but proposed extensions of your present connections; and the immense mineral regions of Alabama are soon to be added to the extended field, from which your varied earnings in the future are to be drawn.

The financial condition of the company December 31, 1868, is exhibited in the annexed—

CONDENSED BALANCE SHEET.

Construction to April 22, 1861	$12,354,249	76

Northern Pacific Railroad.

We learn from a gentleman connected with the management of the Northern Pacific Railroad Company some more direct facts in regard to the new prospects of the company. The appointment of Jay Cooke as the Fiscal Agent of the company involved his becoming part owner of the stock in the road. This contract is not fully complete, and depends for its ratification on the report of two exploring parties, one of which is now on the road to San Francisco, from whence they will proceed to Silka, and thence return across the proposed route of the road to Red River. The other party, which will reach the head of Lake Superior in a few days, will explore the route from the eastern terminus westward. If the report of these parties is favorable, Jay Cooke will complete the contract. The Eastern terminus of the road has been fixed, by a compromise between the conflicting interests, at Duluth, Superior and Bayfield. It will be at a point south and west from Duluth, where roads from Duluth, from Superior and from Bayfield will form a junction, with equal rights of connection, running of trains, rates of fare and freight, &c. Immediately upon the return of the exploring parties their report will be made. If it is such as to lead to the ratification of the Jay Cooke contract, $100,000,000 of the bonds of the company, secured by mortgage on the road bed, franchises and land grant will be placed upon the market. That is the anticipated cost of the construction and equipment of the road. As fast as the bonds are sold work will be proceeded with. —*St. Paul Pioneer, June* 29.

Commercial Relations Between the United States and Canada.

At a meeting of the New York Chamber of Commerce, held on the 3d ult., Gen. H. Walbridge submitted the following resolution:

Resolved,—That the Chamber of Commerce heartily endorses the resolution of the Committee of Ways and Means, which unanimously passed the House of Representatives on the 23d of March, recommending the President to renew negotiations with Great Britain, and press them, if possible, to a definite conclusion, for an arrangement of reciprocal trade with Canada, and securing to our citizens the freedom of the St. Lawrence and of the inshore fisheries of the coast of B. N. America.

Gen. Walbridge said—I offer no apology for requesting your attention to the brief remarks which the importance of the subject demands.

No question affecting the prosperity of any portion of the people of the United States can be viewed with indifference by the inhabitants of this great commercial centre. Containing the representatives of the merchants of this city, it is a duty incumbent upon us to speak in no uncertain tones upon questions which business, experience or the commanding position we occupy entitles us to be heard upon.

POLITICAL ASPECT OF THE CASE.

Before entering upon the commercial question, let it be distinctly understood that the whole subject is associated with the traditions of our history, which, from the earliest moment of our national existence, looked forward to the time when all the countries of North America should work out their destiny under one nationality. While I shall be able to demonstrate that freedom of commercial intercourse between the United States and Canada will be to our benefit; while I shall be able to show, too, that question is peculiarly American, and distinct from any question of "free trade" or "protection" applied to European countries; yet I think it will be conceded that the commercial advantages to us of liberalised trade with our neighbors lying on our fron-

tier fall short of the political results which will follow from such intimacy of interests.

The United States can lift up its head and declare that it does not owe an acre of its territory to conquest. By the wishes of its inhabitants and by purchase has it extended its limits from ocean to ocean, till the voice of the locomotive is heard continuously through its valleys and over its snow-capped mountains from "the rising of the sun to the going down thereof." So far as Canada is concerned, we do not intend to smirch our record in this respect. When the people of Canada are willing to link their political fortunes with us we will give them a hearty welcome; and till then do all in our power to show them that union will be to their interest. A union to the United States will give them a nationality which they do not possess; capital which they now lack; population which is essential to full prosperity. Their accession would give the gratification of extirpating the English colonial system and again uniting with a people who, speaking the same language, sprung from the same ancestry, and having the same colonial birth, at length acknowledged that our forefathers did wisely in establishing their independence; and that to be an American citizen is a political title, higher ambition and perfect development than to continue from usage alone—for commercial considerations have long since vanished—a mere ornamental appendage of a crown three thousand miles distant.

I do not believe it would be good policy, even if practicable, by commercial restriction to "coerce" Canada into a union with us. I never knew either a nation or an individual coerced into friendship. (I, of course, am not now speaking of the feasibility of physical conquest.) I have seen it stated gravely that although liberalisation of trade between the United States and Canada would be greatly beneficial from a purely American stand-point, yet that by refusing this trade we might injure the commerce of Canada, and that in order to prevent this the Canadians may be forced into annexation.

Much as I desire that Canada should become a portion of the Union, let me say that if the people are of such a calibre, if their ideas of the privilege which it is to be an American citizen go no further than the paltry feelings that thereby they may make a few more dollars—albeit they have to crawl to do so,—I want no such converts. The conversion must appeal more to their understanding as to the advantages of our form of government and less to the pocket before we could feel any pride in calling the four millions on our northern frontier fellow-citizens and could safely entrust them with the privilege of helping to frame our laws. American citizenship is a boon, a glorious franchise to be required by those who appreciate it—not a penalty to be inflicted.

Let us bring about intimate commercial relations if we can upon terms which will be mutually beneficial, and the political results will follow. With their business blended with ours, material prosperity associated with us, their prejudices dispelled by a friendly assimilation with our people, it needs no prophet to foresee the result. Their connection with Great Britain is a mere sentiment now that English policy has changed her former relations to her colonies; and it is only unwise talk about "coercion" on this side that gives tenacity to what would otherwise die out.

THE NEW TREATY—WHAT IT SHOULD EMBRACE.

The questions between the United States and the provinces are—

First. An interchange of the natural products of the soil upon such reciprocal terms as may be agreed upon.

Second. An assimilation of excise duties and of patent and copy-right laws.

Third. The free navigation of the St. Lawrence and the enlargement of its canals.

Fourth. The freedom of the inshore fisheries.

Fifth. The regulation of the transit trade.

These subjects embrace three propositions—the free navigation of the St. Lawrence and the enlargement of the canals to a capacity of floating vessels of 1,000 tons; secondly, the freedom of the inshore fisheries, from which, under the treaty of 1818, we are excluded; and, thirdly, an interchange of natural products.

For the first two concessions it cannot be contended we have any equivalent to offer, for we do not propose to throw open our canals to her vessels (as the individual states control them, with the exception of the Sault Ste. Marie Canal of one mile in length), nor do we propose, for similar reasons, to offer them the fisheries of our coast, such as the Chesapeake Bay, &c.

Upon the interchange of natural commodities we can afford the Canadians the benefit of our markets; and it is evident, therefore, that unless we consider the subject as a whole we can make no arrangement. Hence it is that the resolution of the House of Representatives not only wisely, but of necessity embraced the three propositions as together forming the question to which the attention of the President was called.

WHAT ADVANTAGES WE SECURE.

Canada has officially offered to enlarge our canals and give us their freedom. To be of substantial service to the west the navigation of the St. Lawrence must be greatly improved. The canals and locks would require to be enlarged equal to the transport of vessels of at least 1,000 tons. The Canadian canals are sufficiently large for their own trade to any probable development. The enlargement so as to float to tide water the grain-laden vessels of Lake Superior, Michigan, Erie, and Ontario would involve the expenditure of several millions of dollars. In 1866, the Provincial Commissioners, before a Committee of the House of Representatives, stated their willingness to embark in this outlay, provided that an arrangement could be effected covering the propositions contained in the resolution of the House of Representatives of the 23rd March last. Canada has thus offered to enlarge the Welland and the St. Lawrence without cost to the United States; but she asks in return that the convenience of our markets shall be extended to her. Canada offers to throw open the inshore fisheries; but in return that her fish and coal may be admitted within our borders.

It is for us to examine if the equivalent is a reasonable concession for the privileges she offers; or if, in admitting the surplus grain of Canada, her timber, her coal, and her fish, we are asked to pay too large a price.

CHEAP FREIGHTS—THE NECESSITY OF THE AGE.

What is the free navigation of the St. Lawrence and the enlargement of the Canadian canals worth?

There is no doubt but that cheap freights to tide-water is the most difficult problem which the states of the west have to solve. And whatever interests the "Great West," interests no portion of the country to a greater degree than this city of New York. A pebble cannot be dropped into the ocean but the disturbance it causes is felt on its utmost shore. If this is true, how much more forcible is the fact that you cannot turn a spadeful of earth in any portion of the United States but the effect is felt here in this great emporium.

I am not the advocate of any particular channel of communication by which the teeming lands of the west shall empty their treasures at our feet. What I want is, cheap freights and that route which will carry the produce of the agriculturist more cheaply to market is the one which, by affording greater remuneration to the producers, enhances the value of his land.

It is for this reason I consider the enlargement of that great natural water communication—the Lakes and the St. Lawrence—as one of the most important questions of the day. If, by throwing that outlet open, freights could be cheapened from Minnesota to tide-water but five cents a bushel, see what an increased value all the lands of the west would present. Five cents a bushel in wheat represents to the farmer an increase of $1 per acre, the interest at 10 per cent on $10; so that by the simple saving of five cents a bushel you raise the value of lands no less than $10 an acre. And it is indisputable that it is of no possible consequence to the city whether the grain floats to its European market part of the year by the Gulf of St. Lawrence or by the Hudson; whether you reach New York by the Erie Canal, by a canal from Oswego, or you float produce down the St. Lawrence, and then find it advantageous to turn southward by the Champlain Canal. All these routes possess advantages; but it is the cheapest that will command the commerce, and it is the reality of a cheap communication that really interests us, for the wealth of the country is our wealth, and we fatten upon commerce co-extensive with the continent itself.

THE PRICE OF BREADSTUFFS IN THE EUROPEAN MARKET.

The price of wheat in the English market is regulated by the demand and the supply there. Convinced that New York will be the centre of the monetary exchanges of the world, that does not change the fact that England will always be able, so far as we are concerned, to regulate the price she will pay for the breadstuffs she consumes, because of the competition she can command by the large market she affords. The surplus wheat of America is not all she has to depend upon. Our most formidable competitor in supplying Europe with grain is Russia; and it is the competition between the wheat of the Baltic and the wheat of America that fixes the price. The Russian Government is straining every nerve to place its surplus wheat in the markets of Europe at the lowest price and the greatest quantity. A vast system of railways is being carried out in Russia, and we must be prepared to enter into competition with the grain of that country upon less advantageous terms than at present. I have not time to enter upon a detailed consideration of this subject; I merely mention it to awaken the public to the fact than in the immediate future we must be prepared to encounter a greater amount of competition than ever before, and that unless we cheapen freights, unless we avail ourselves of all routes by which we can reach the European market with the least expense, we will find ourselves excluded from any participation in furnishing the food of Europe. When the Russian railways open up that cyclopean territory and enables the peasant labor of that region to lay its cereals on the banks of the Thames and the Seine, we will be brought face to face with a

sharp competition of which past experience affords no parallel.

The free navigation of the St. Lawrence is, therefore, a matter of necessity to the prosperity of the North-West. The various channels of communication for produce to tidewater are crowded beyond their capacity at certain periods of the year. No artificial communication will be sufficient for the future. I am in favor of having as many routes as possible. If the St. Lawrence, being a natural water communication, will be found cheapest, that route which is the most economical will obtain the preference. Let us have a dozen, nay, fifty new routes if possible.

THE CANADIAN INSHORE FISHERIES.

Upon the freedom of the inshore fisheries, apart from the advantage of our fishermen and the enlarged nursery of seamen which a prosperous trade will induce, the arrangement of this matter will remove an irritating subject between ourselves and our neighbors; and the settlement of the question is in every respect called for. It is desirable that there should be a definite adjustment. The periodical exhumation or the disputed interpretation of the treaty of 1818, which preceded the negotiation of the convention of 1854, is again threatened. Under the undisputed interpretation of our rights in the fishing grounds, aside from the contravened explication of the treaty of 1818, our fishermen are excluded from fishing inside of three miles of its coasts. The Canadian Government, with the concurrence of the Imperial authorities, permits a license system, which enables our fishermen "to fish for or take, dry, or cure any fish of any kind whatever in British waters within three marine miles of any of the coasts, bays, creeks, or harbors whatever of Canada." This system has, so far, prevented a culmination of that ill-feeling which, up to 1854, led almost to open hostilities between our citizens and those of the provinces. But the Canadian Government has given notice that it considers the license fee as unequal to the duties which we impose upon Canadian caught fish; that it is a mere nominal sum, as a recognition of their right to the fisheries; and that the license system is only temporary, and will be put an end to unless general trade arrangements are concluded.

RECIPROCAL TRADE.

We now come to the third matter, upon which alone the United States have really any thing to offer in return for the concessions just discussed; I allude to reciprocal trade, the interchange of natural products of the two countries.

The broad fact is that, as we export to the West Indies, South America, and to Europe large quantities of those grains which Canada has to sell, we would not under any circumstances purchase for our own consumption any of the products we so export, except so far as local convenience might render it desirable. If we purchase fish and coal of Nova Scotia for consumption in our Eastern States, we sell Western Canada both coal and fish in as great quantities. Those purchases are simply matters of local convenience, and save to the customers on either side of the line the expense of unnecessary transportation. But in a consideration of the great bulk of the trade these currents are of secondary importance.

The purchase of produce, if made to any extent, would simply be to add to the bulk of our exports; that is to say, we should purchase this produce and manipulate it, as the merchant for the European consumer. The price is regulated, I repeat, by the demand in England and the sharp competition with the grains of Northern Europe; if we refuse to forward the surplus grains of Canada to the European market, they will find their way there without our aid, moved by the identical money that would move them if we were the active agents. Although it is our enterprise and credit that move our surplus crops, yet it is the money of the ultimate consumer that really does it. The farmer of Illinois, for example, sells his grain in Chicago; the Chicago shipper obtains the money to forward it here by bills on New York. When it reaches here we send it to Europe by bills on London. Our credit and enterprise are rewarded by the profits which accrue, but the money is really furnished by the final purchaser. If we cannot send grain across the ocean to pay our debts, we must send the money; so the same conclusion is arrived at.

There is one important exception—the general statement that the products of Canada would be mostly purchased to add to the volume of our exports. In pine lumber the supply from Canada is not only absolutely essential to us, but the returns show that notwithstanding the imposition of a duty of 20 per cent., we have purchased for our own consumption larger quantities of Canadian lumber than ever, and paid the duties thereon.

A report last year by the Secretary of the Treasury says:—

"Now that the forests of Maine have been to a great extent denuded of pine timber, the eastern states must depend upon the pineries of the Ottawa Valley. It is a waste of time to enter into any calculation as to the relative cost of transporting lumber; because even were the cost the same, which in the nature of things it would not be, the western states will continue to consume all the lumber that can be produced in the north-west. The Atlantic states must use Canadian lumber or find some other material as a substitute. Upon the termination of the Reciprocity Treaty, a heavy duty was imposed upon Canadian lumber; official tables show that this duty has been wholly paid by the American purchaser, the prices for lumber on the Ottawa being higher now than in 1865—and nearly all of it being purchased for the American market."

The sales of lumber in Ottawa, on American account, in 1867, amounted to half a million dollars more than in 1866; and of a total export from Canada in 1867 of pine lumber of the value of $5,105,342 no less an amount than $5,043,367 was sold to parties who shipped it to this country.

The special commissioner of revenue also thus speaks of the lumber interest:—

"A wise foresight would indicate that the national interests are likely to be best subserved by restricting rather than stimulating the destruction of our forests, which are diminishing with alarming rapidity. So certain is the future advance in the price, owing to the increased demand and diminished supply, that if it were possible to draw for the next ten years the whole domestic supply from foreign sources, the result would be for the benefit rather than the detriment of the country; while in respect to private interest the increase in value of timber lands held in reserve during the same period would probably exceed any average interest that would be likely to accrue from a different employment of capital."

And a recent Detroit paper, in an article upon the magnificent pineries of Michigan, asserts that they will disappear within the next 15 years, at even the present rate of demolition. While a pine tree can be cut down in half an hour, you are destroying what it has taken a century to produce.

I do not propose, however, to enter into details either as to the articles to be admitted or the conditions under which they will be included. The details have been left by the resolution of the House of Representatives to the President, and I have confidence in his ability, and in that of the high officers of the Government who will be charged with the subject, that the interest of our citizens will be carefully guarded.

CONCLUSION.

In general terms, while the Canadians will be satisfied with selling in our markets, in return for the enlargement of the St. Lawrence and the fisheries, the convenience of our markets will really be no competition to our farmers and an absolute benefit to our merchants. Our capital and credit, with the fact that we have free access to the ocean, would be a great convenience to the Canadians; but their use necessarily implies that, in using our capital, credit, and ports, we derive the advantages that the possession of capital, credit, and ports give. In other words we become the merchants of four millions of people, whom we are now driving away.

Under the operations of the old Reciprocity Treaty, the commerce between the United States and Canada increased in a striking manner. In 1852 the total trade between the United States and the provinces amounted to but $16,013,848, while the total returns for 1866 amounted to $52,978,224. The returns from no other country with which we have commercial relations show anything like as rapid growth, imperfect as that convention was. As a revenue measure, the abrogation of that treaty has not been a success; for we do not now collect fifty per cent. of the sum averaged by imports from Canada during its continuance.

It has been the habit of unreflecting persons to talk as if this was a question in which we had little interest, that it was an eleemosynary grant to Canadians. I have demonstrated that this is a great mistake. Important as the convenience of our markets may be to Canada, investigation proves that the subject may be of greater consequence to us; and no clear-headed man who examines the subject can come to any other conclusion, while no honest man, once alive to the truth, but will hasten to acknowlege it.

Mr. Opdyke spoke in favor of the resolution.

Mr. Lowe was in favor of the resolution, but did not wish to be understood as endorsing all General Walbridge's arguments. The resolution was adopted and a copy ordered to be sent to the Secretary of State of the United States.

Railroads in Iowa.

It is stated that Iowa will soon have four railroads connecting the Mississippi and Missouri Rivers. The great centre line, extending from Davenport to Council Bluffs, is just completed and in successful operation. Two others, one beginning at Dubuque and already built to Fort Dodge, and the other at Burlington, will be completed in a few months. In addition to these there are now building the McGregor and Sioux City line, to be completed to Sioux City by January 1,) the St. Louis and Cedar Rapids and Minnesota road, the Fort Madison and Burington road, the Iowa River road, the Iowa Central, the Des Moines and Indianola, and the Decorah Branch.

☞ The Quincy (Ill.) *Whig*, of the 8th, says: "The Directors of the Quincy, Missouri and Pacific Railroad Company, after a two days' session of a full board, adjourned yesterday. Before doing so, however, they gave evidence of their determination to lose no time in the prosecution of the work, by appointing a capable and efficient chief engineer, who is empowered to organize two corps of engineers, and proceed with the preliminary survey of the route at once."

American Railroad Journal

Saturday, July 24, 1869.

Stock Exchange and Money Market.

The movements in the Money line, since our last, have been favorable to the borrowing interests. The demand from speculative sources for immediate aid has been on a less extensive scale, and has been quite promptly met at the reduced figures of 6@7 per cent. on call, as the governing rates in the open market. A livelier business has been noted in the discount line, choice to good grades of commercial paper having been in more request at from 7@10 per cent. per annum, as the extremes. The city banks have been further strengthened in their reserves, the deposits having been enlarged about 5¼ millions; the legal tender average, about 3⅛ millions, and the specie hoard over three-quarters of a million. They have consequently been more liberal in granting accommodation, and have increased their loans, about 1½ millions, or to the full extent of the requirements of their customers. The banks now hold deposits to the amount of 188½ millions against less than 180 millions two weeks ago. Their legal tender reserve is now nearly 51⅞ millions, against less than 46¾ millions on 17th instant. Their specie average is up to 31 millions, against 28½ millions a fortnight since, and less than 7⅞ millions on the 17th of April last. Their loan and discount aggregate is 257 millions, against 276 millions on the 5th of June, 1869, and nearly 283 millions a year ago. The U. S. Sub-Treasury reduced its cash balances nearly 6½ millions, last week. They were again augmented on Monday of the current week, by order of the Secretary of the Treasury who has directed the transfer of about $8,000,000 Currency from Washington, and the Sub-Treasuries at Boston, Philadelphia, Cincinnati, &c., to the New York Office, to pay for further purchases of United States 5-20s for the Sinking Fund. These purchases for the last half of July alone will amount to $7,000,000, and with the premium to $8,400,000, and the same process, it is believed, will be continued through the month of August—the concentration of the Currency balances of the Treasury being made at New York for this object. In addition to the present and accruing Currency balances from the Internal Revenues, which are in excess of pending disbursements for the ordinary support of the Government, the Treasury will be in the receipt of $16,000,000 or $18,000,000 in Gold Coin through the month of August, at least two-thirds of which may be sold and the proceeds turned into United States 5-20s, as not being needed to pay Gold Interest. Of the eight millions of Currency ordered to New York from the other Treasury Offices, about 4 millions were received on Monday of this week, and the general balances in Gold. Currency and other funds that afternoon were $95,139,404 as against $90,736,343 on Saturday night. The receipts of the office on Tuesday reached nearly 7 millions, which were nearly half a million in excess of the day's disbursements, so that the cash (coin and currency) balances on Tuesday evening were over 95½ millions. On Wednesday at noon, the Treasury purchased $3,000,000 in United States 5-20s, and on Tuesday at noon, sales of Gold were made to the extent of $1,000,000.

The specie reserve of the city banks according to the latest return is $31,055,450, against $20,399,031 same time last year. The city bank deposits are now $188,431,701, against $228,130,749 week ending July 17, 1868. The legal tender reserve amounts to $51,859,706, against $71,547,545 same time last year. The circulation now stands at $34,178,437, against $24,004,111 same time last year. The loans are now $257,008,289, against $282,915,490 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $118,554,690 a day, against a daily average of $135,308,058 the preceding week, and $141,028,457 the week ending with June 30, 1869. The current week's exchanges average about $108,008,500 a day. The city banks, last week, reported a further gain of $788,538 of specie, $5,234,462 of deposits, and $3,156,978 of legal tender notes. They increased their loans, $1,583,347; and reduced their circulation, $99,508.

The city bank exchanges on Wednesday were $87,356,694, and the resulting balances, $3,681,003.

National Bank notes to the amount of $128,460 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $316,525,590, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be de-

ducted the currency returned, including worn out notes, amounting to $16,716,295, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,809,295. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342 873,100; and for the public deposits, $22,709,500—making a total of $365,582,600. The Treasury Department last week redeemed and destroyed $293,886 of worn and mutilated fractional currency, and issued $108,146 of new. The outstanding amount of fractional currency on the 1st of July, was $32,062,528 against $33,452 523 on June 1; $35,330,323, on May 1, $36,719,912 on the 1st of April, $36,781,548 on March 1, $35,511,127 on February 1, and $34,215,716 on the 1st of January.

The U. S. Treasurer has issued fifty thousand dollars worth of new ten cent., and eighteen hundred dollars worth of new fifteen cent. fractional currency. The new twenty-five and fifty cent. notes will not probably be issued before the first of August.

The U. S. Sub-Treasury receipts, week ending with July 17, were $14,895,433, including $2,325,618 from customs duties; payments, $21,368,790, including $3,968,618 of coin interest; balance at the close of the week, $90,736,343, against $97,209,700 at the close of the preceding week, showing a decrease of $6,473,356. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $5,266,174, including $357,849 from customs, and payments, $857,113, including $467,824 of coin interest. On Tuesday, receipts, $6,946,316, including $377,000 from customs, and payments $6,526,619, including $402,169 of coin interest. The balance at the close of business on Tuesday stood at $95,559,102, against $94,320,598 a week previous; and $98,230,998 on July 7, 1869. The aggregate receipts of the office in June were $55,052,216, including $8,847,210 from customs, aggregate payments, $47,347,878, including $3,131,675 of coin interest.

The outstanding amount of coin certificates on the 1st of July was $30,489,640 against $23,540,720 on June 1st; $16,307,200,on May 1st; $21,672,500, April 1, $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $1,137,000, and retired $2,212,618 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during June, reached $13,593,420.

Government revenues have been yielding quite satisfactorily for the midsummer season, since our last. The excises have been particularly prolific The customs have been up to a fair average. The excises, last week, yielded about 7½ millions; customs at the port of New York, $2 325,618, and at the outports about $765,000 (in coin) more, making the grand total income for the week equal to about $11,672,334 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,664. The receipts from the same source, during the fiscal year, ending with June 30, 1869, were $158,287,177. The customs yielded, same time, about 182 millions in gold. The miscellaneous revenues of the fiscal year yielded about thirty millions, making a grand total income for the year ending with June 30, 1869 of about 370 millions. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 21½ millions.

The dealings in Gold have been on a less confident basis, most of the week, though there has been a firm and rather buoyant market for foreign exchange, and the specie export movement has been more extensive. The range of the price has been from 134⅞@137⅛; and the closing quotation on Wednesday was 135⅛. The specie shipments from the port, last week, were nearly 1¾ millions. Thus far in the current week, they have been $530,000 by the *Allemania* on Tuesday, and $517,276 by the steamers of Wednesday. The customs call has been on a fair scale, averaging quite as well as usual at this time of the year. Government was not a seller of gold until Thursday of this week, when a million dollars were disposed of to the highest bidders through the U. S. Sub Treasury at this port. The coin interest disbursements at the New York office reached nearly four millions last week, but have been on a reduced scale, thus far in the current week.

The following is the statement of the New York Gold Exchange Bank for the week ending Saturday, the 17th day of July, 1869:

Average am't of loans and discounts....	$1,929,571
Average amount of specie....	992,380
Average amount of deposits....	2,092,166

The customs of the port on Wednesday yielded $329,000. The U. S. Sub-Treasury disbursed $651,392 of coin interest, on that day.

The customs demand for Gold last week, averaged $337,603 a day; thus far, this week, it has averaged $367 500 a day, or equal to a weekly aggregate of $2,205,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $73,468, and since Jan. 1, $9,671,486, against $3,971,151 same time in 1868. The receipts from California, since our last, have been none. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to June 30, 1869 was $124,688,174, against $113,529,891 in the preceding fiscal year. The customs revenue of the port since Jan. 1 1869, has been $70,367,790, again $61,707,362 same time in 1868. At San Francisco, from Jan. 1, to June 30th, 1869, $3,720,749, against $4,028,521 same time last year.

The U. S. Treasury receipts from customs at all ports from July 1, to July 17, were about 9⅞ millions.

The exports of specie, from this port, last week, were $1,762,546, against $2,094,138 same week last year; total, since Jan. 1,1869, $18,212,726, against $57,509,316 same time last year; and the total for the fiscal year ending July 1, 1869, $37,279,653, against $76,309,866 during the year 1867–'68. Government disbursed last week through the U.S. Sub Treasury here, on account of the coin interest on the public debt $3,968,618, and since Jan. 1, 1869, $59,739,127, against $56,975,367 same time in 1868; year ending July 1, 1869, $88,325,756, against $73,485,386 during the preceding fiscal year of 1867–'68. The specie exports from San Francisco, from Jan. 1, to June 30, 1869, were $21,046,229, against $20,861,187 same time in 1868.

The total receipts of California gold at this port, during the fiscal year ending with June 30, 1869, were $19,419,278, against $36,726,790 in fiscal year 1867–'68, showing a decrease in the last fiscal year, of $17,307,512.

Foreign Exchange has been in moderate request and held with increasing firmness, since our last, notwithstanding the freer offerings of commercial bills. Bankers' prime sixty day bills on London closed tamely on Wednesday at 109¼ @110⅛, and on Paris to 5.18¾@5.12½; sight bills on London to 110¼@110⅝, and on Paris to 5.12½c.@5.10¾. The offering of produce bills has been unusually liberal this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $4,668,910, against $2,638,195 same week last year; total, since Jan. 1, 1869, $100,411 558, against $93,597,001 same time in 1868; and for the fiscal year ending with June 30, 1869, $172,815,331, against $179,085,149 in preceding fiscal year of 1867–'68.

A generally strong and buoyant market has been noted for Government securities, which have been offered quite moderately in the open market, while the demand has been to a fair average. The bulk of the home investment business has been in the later issues, particularly in the Ten Forty five per cent. bonds, and in the U. S. currency six per cent. bonds, issued in aid of the several Pacific Railroad enterprises. Many holders of the Five Twenties have been exchanging them for Ten Forties and currency sixes; as also for the Central Pacific six per cent. gold bearing First Mortgage Bonds, which have been placed on the regular sale list of the Stock Exchange and which have been dealt in daily at the Board, through the week, at 97¾@98⅜ per cent. The Government bought three millions of U. S. Five Twenties on Wednesday at from 119.85@120.03. The Board and street dealings on that day showed a dull market, and a rather lower range of prices.

U. S. sixes of 1881 closed here on Wednesday at 120⅜@120½; U. S. Five-twenties of 1862, ex-coupon, 123⅜@124½; U.S. Five twenties of 1864 at 121⅜@121⅝; U. S. Five-twenties of 1865 at 121⅜@121⅝; U. S. Five-twenties of 1865, consolidated, 189⅞@120⅛; U. S. Five-twenties of 1867, 119⅞@120⅛; U. S. Five-twenties of 1868, 119⅞@120⅛; U. S. Ten-forties at 110¼@110½; U. S. Six per cent. currency bonds, 107@107¼.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	July 7.	July 14.	July 21.
Consols	93⅛	93¼	93⅛
U.S. 5-20's of 1862...	81⅝	81⅞	83⅛
Erie	19½	18¾	19
Ill. Central	95½	95¾	94½

Railway and miscellaneous share property has been generally less active since our last. The speculative favorites have shown frequent and notable fluctuations in prices. On Tuesday the market exhibited more vigor and buoyancy during the late afternoon. On Wednesday the business was moderately active, but rates were without remarkable changes.

In domestic produce there has been less animation, since our last, and prices have been variable. Breadstuffs and Provisions closed irregularly. The export demand has fallen off considerably. Cotton wound up in favor of buyers, who were not disposed to purchase freely. Middling up-

land cotton closed very tamely and heavily on Wednesday at 34 cts. per lb. The stock of cotton now here is estimated at about 19,500 bales. The receipts at the port this week, have averaged about 1,100 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,294,000 bales, against 2,321,000 bales same time in 1867-8; exports, same time 1,428,500 bales, against 1,691,000 bales same time in 1867-'8; stock on hand at latest dates, 41,000 bales, against 80,000 bales same date 1868. Total crops of 1867-'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 15,270 pkgs., against 13,715 pkgs., same time last year. From Boston, 5,872 pkgs., against 6,287 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in moderate demand, at from 11½@16c., per lb.; week's receipts, 6,732. Milch cows, dull at from $40@$110 each, receipts, 61. Veal calves in less request at from 6@11c. per lb.; receipts, 3,340. Sheep and lambs at from 4@7c., and 8@11c. per lb.,; receipts, 23,068. Swine in moderate demand at from 9½@10c. per lb.; receipts, 14,178.

In foreign goods, there has been a fair business noted, particularly in Groceries which have been purchased freely at stronger prices. Dry Goods have been depressed. The total imports of foreign dry goods, last week, were $1,989,212, and the total amount marketed $814,973. The value of foreign general merchandise imported last week, was $4,936,743—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $6,925,955, against $4,680,442 same week last year; total, since Jan. 1, 1869, $173,463,145, against $133,640,285 same time in 1868; and fiscal year ending July 1, 1869, $285,447,842, against $237,712,435 during the preceding year of 1867-'8.

There has been much less activity in Bread stuff freights, while Petroleum engagements for European ports have been on an extensive scale. For Liverpool we quote flour at 1s.10½d.@2s 1½d. by sail, and 2s. 4½d.@2s. 7½d. by steamer, per bbl.; grain at 7¾d.@8d. by sail, and 9d. by steamer, per bushel; cotton at $\frac{5}{32}$@$\frac{3}{16}$d. by sail, and ¼@$\frac{5}{16}$d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 25s.@40s. by steamer, per ton. Total number of vessels in port on Wednesday, 443.

The New York exports, exclusive of specie, for the week ending July 10, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week.....	$2,638,195	$4,668,910
Prev. reported.....	90,958,806	95,742,648
Since January 1.....	$93,597,001	$100,411,558

The imports for the week ending July 17, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods.....	$1,480,619	$1,989,212
Gen. merchandise.....	3,199,823	4,936,743
Total for the week.....	$4,680,442	$6,925,955

Rubber Car Springs.

Since the expiration of the Goodyear Patent, the manufacture of Rubber Springs has become general, and the result has been a considerable reduction in price, and in some cases a corresponding reduction in quality.

The Star Rubber Co., (Successors to Mead Rubber Co.,) were the first in the field after the expiration of the Rubber Patent, and contributed greatly in breaking down the high prices charged during the existence of the monopoly. The Springs manufactured by them, we understand, compares favorably both in quality and price with any in the market, and we have much pleasure in calling the attention of our readers to their card in another column.

☞ The *Railroad Record* says that the contractors for laying of the iron on the Fort Wayne, Muncie and Cincinnati Railroad will commence laying on this road in a few days, and expect to have the road in running order between Fort Wayne and Bluffton, twenty-six miles, by the 1st of September. The contract for grading and preparing the road bed for the middle division has been given to C. Bowser & Co. The company expect to have the entire road completed by January 1, 1870.

Journal of Railroad Law.

RAILROAD COMPANIES—DUTY OF PERSON CROSSING TRACK TO LOOK OUT FOR DANGER—OTHERWISE GUILTY OF NEGLIGENCE.

The facts of the recent case of Tracy *vs.* The Troy and Boston Railroad Company (38 N. Y. 433), are fully and clearly stated in the following opinion by

MASON, J.—The decision of this case involves the construction to be given to section 44 of the general railroad act of 1850, as amended by section 8 of the act of April 15, 1854 (Laws 1850 Ch. 140 § 44, Laws 1854 ch. 282, §8). This eighth section declares, "that every railroad corporation, whose line of road is open for use, shall, within three months after the passage of this act, and every railroad company formed, or to be formed, but whose lines are not now open for use, shall, before the lines of such railroad are opened, erect, and thereafter maintain, fences on the sides of their roads of the height and strength of a division fence as required by law, with openings or gates, or bars therein, at the farm crossings of railroads, for the use of the proprietors of the lands adjoining such railroads, and shall also construct, where the same has not been done, and hereafter maintain, cattle-guards, at all road-crossings, suitable and sufficient to prevent cattle, horses, sheep and hogs, from getting on to such railroad;" and the section then declares "that, so long as such fences and cattle-guards shall not be made, and when not in good repair, such railroad corporation and its agents shall be liable for damages which shall be done, by the agents or engines of such corporation, to any cattle, horses, sheep or hogs thereon; and when such fences and guards shall have been duly made, and shall be kept in good repair, such railroad corporation shall not be liable for any such damages, unless negligently or wilfully done. (Laws 1854, p. p. 611, 612, § 8.) It was held in the case of Brace *vs.* The New York Central R.R. Co. (27 N.Y. 269), that this statute, requiring railroad corporations to maintain cattle-guards at road crossings, applies as well to streets which are crossed by railroads in villages as to country highways.

The fact, that a railroad crossing is at or near a depot, and that to make such cattle-guards there would inconvenience the company, will not excuse them from complying with the positive requirement of the statute. (Bradly *vs.* The Buffalo, New York and Erie R. R. Co., 34 N. Y. 427).

These statutes impose the duty upon railroad companies to fence both sides of their track, and are liable for damages done to cattle, so long as such fences are not made and kept in good order. (Shepherd *vs.* The Buffalo, New York and Erie R. R. Co., 35 N. Y. 641.)

The passage of this act being induced by public considerations, and its purpose being to protect the traveling public and the owners of domestic animals along the line of their road, it should receive a liberal construction to effectuate the benign purpose of its framers. A rigid and literal reading would, in many cases, defeat the very object of the statute, and would exemplify the maxim, that "the letter killeth, while the spirit keepeth alive." Every statute ought to be expounded, not according to the letter, but according to the meaning; "*qui hæret in litera haret in cortico.* (" Dwar. on stat. 690.) And the intention is to govern, although such construction may not, in all respects, agree with the letter of the statute. (Ploud, 205.) The reason and object of a statute are a clue to its meaning (Dwar. on stat. 695), and the spirit of the law, and the intentions of its makers are diligently to be sought after, and the letter must bend to these. (6 Bac. Abr. 384 6th ed Lond. 1807; 1 Kent's Com. 465; Smith's Com. on stat. § § 709, 710.) The defendant in this case seeks to escape liability for the injury it has inflicted through the letter of the statute. The statute declares "that every railroad corporation shall erect and maintain fences on the sides of their road," etc., and it is claimed in the case before us, that the road at the place where the cow in question was killed is not their road but the road of the Troy Union Railroad Company, and consequently the defendant is not liable.

The case shows, that the defendant is a railroad corporation, and helped to construct this Union Troy Railroad, and have secured to them, in law, the right to use this railroad, and run their cars over it. The Troy Union Railroad Company is a corporation of a peculiar character. It was never organized to become a common carrier, or for the purpose of constructing a railroad for its own use. It was organized solely and exclusively for the purpose of constructing a railroad through the City of Troy, for the use and benefit of the railroad companies running their trains to and from the said city. This really is the whole extent of its powers.

It neither owns nor runs any engines or cars. In fact, it has no right to operate this railroad. It is not organized for profit, and pays no dividends. It is supported by assessments on those railroad companies for whose benefit the road was constructed. Its passenger house and other property, and all its rights of property, if not its franchise, belong to these different railroad companies which are entitled to run and use the road. Its management is confided to a board of directors, chosen exclusively by these different railroad companies with the Mayor of Troy. Having constructed the road, the principal object of creation was accomplished. By the organic act, the defendant is forever entitled to use the road, and have the right and privilege of running its engines and cars thereon, to the exclusion of the Troy Union Railroad Company. The case shows that the track of this railroad at the place of collision is a mere continuation of the defendant's line of road, and that it alone uses the road at that point.

Upon these facts, I cannot doubt but the defendant is within the spirit and intent of this statute in regard to fences liable for the injury complained of in this case. The defendant is essentially owner and operator of this road. The statute was designed to guard against the very mischief complained of against the defendant in this case; the operating of a railroad without the statute safeguard of having it fenced. Those four operative railroad corporations, for whose use this road was constructed, must all be held liable to respond to the obligations imposed by the general railroad act in regard to fencing. The Supreme Court of Vermont, in the case of Clement *vs.* Canfield (28 Verm. 302), held, under a statute substantially like ours, that the lessee of a railroad, who was operating it, was liable if the fences were not maintained.

The judgment of the justice should be affirmed.

Judgment affirmed.

Railroad Car Seats.

We publish in another column the card of the WHIPPLE MANUFACTURING COMPANY, of Detroit, Michigan, advertising their Patent Car Seat, with a cut representing it.

Their agent informs us that it was first used by the Michigan Central Railroad Company, in May, 1868, and that since then it has been adopted by nearly all the prominent Railroad Companies in the West. Early last Spring he brought it east of the Alleghanies, where its merits were at once appreciated by the managers of the principal railroads in the States of Pennsylvania, New Jersey, New York, and somewhat (thus far) in New England, where it is also being very generally introduced.

From a personal examination of the Seat, (one of which we have in our office,) we are free to say that it appears to be the most perfect thing of the kind yet produced. The arrangement of the Springs is such that they cannot lose their elasticity. It is as soft and pliable as the best of curled hair seats, and to all appearances nearly indestructible; while its cost must be considerably less than other first class seats. We bespeak for it, among our railroad friends, who have not used it, a fair trial.

We also publish a card from the same company, notifying the public that "one Carr has been manufacturing this seat and offering it for sale," without their authority; and that they will promptly prosecute all infringements of their rights under their patent.

It is gratifying to feel that all persons who bring out and perfect really useful inventions, are protected in their rights by the laws of the land; were it otherwise there would of course be no inducement for the talented and skilled among us, to give us the benefit of their labors.

☞ The Central Railroad Company of Georgia contemplates the immediate extension of the Southwestern Railroad between Smithville and Albany, from Albany down to Newton, Baker County. When the surveyors shall have completed this work they will immediately proceed to Fort Gaines and survey for an extension of the Cuthbert and Fort Gaines branch road, from the latter point to Abbeville, Henry County, Alabama. Both of these extensions are very nearly of the same length, about twenty-three miles, and both pass through very productive cotton regions. They are to be built at the earliest possible day.

☞ The road connecting Swedesboro', N. J., with the West Jersey Railroad, at Woodbury, is rapidly approaching completion. The road bed—about ten miles in length—is already graded, and the iron for the entire distance has been contracted for—a portion being already laid down. It is expected that trains will be running by the 20th of September.

☞ The Wheeling *Intelligencer* says that at a late meeting of the Directors of the Pan Handle road it was resolved to put the road under contract to Wellsburg forthwith. The survey of the road to the Ohio County line has been ordered, and the survey will be immediately made.

☞ The earnings of the Pacific Railroad of Missouri for June, 1869, were $258,835, against $252,873 in June, 1868—an increase of $5,962.

SEVEN PER CENT. GOLD

FIRST MORTGAGE CONVERTIBLE BONDS

OF THE

Danville, Urbana, Bloomington and Pekin Railroad Company

OF ILLINOIS,

Principal and Interest payable in Gold at the Farmers' Loan and Trust Coupany, New York. Coupons payable April and October.

FREE OF GOVERNMENT TAX.

The Danville, Urbana, Bloomington and Pekin Railroad, upon which property these bonds are issued, is now in process of construction, its termini being the cities of Danville and Pekin, both in Illinois. The length of the road is 117 5-100 miles; its capital stock $3,060,000. The grading, bridging, and all the work necessary to perfect a complete roadway has been already done, and the whole line is ready for the rails. These are rapidly being put down, and a portion of the road is now in successful operation. It is expected that the whole road will be completed early the coming autumn.

These bonds are convertible into stock at par, at the option of the holder, and may be registered in the name of the owner, at any time if desired. The total amount of bonds is limited to $2,000,000. The security offered is, as we shall show, the very best. Already sums, nearly equal to the total amount of bonds to be issued, have been expended on the road. The bonds, averaging less than $18,000 per mile, are secured by a first mortgage on the whole road, and entire property of the company. The road runs East and West on the line of the principal and oldest emigrant-road in the State, passing through several populous towns and cities, and the richest agricultural district in Illinois—in a word, through the garden of the Garden State. Its local business alone will suffice to make it a first-class paying road; while, with its connections with many principal lines, its through trade must be such as to make it one of the most profitable in the country.

The road will be consolidated with the line from Danville to Indianapolis, making a line of 210 miles. At Indianapolis, connection will be made with all the through lines to New York and Baltimore; at Danville with the Toledo, Wabash and Western. In fact the road will form a main link in the direct communication of the principal Atlantic cities with southern Illinois, with Keokuk and Burlington, Iowa, and thence with Omaha and the Pacific.

It will complete a direct line from Boston to Peoria, Keokuk, Burlington, Omaha and the far West, via Albany, Buffalo, Cleveland, and the Bellefontaine Railroad to Indianapolis and Danville, or via Toledo and Wabash and Western Road.

It will form the most direct line from New York to the same points West via the New York Central, Lake Shore and Bellefontaine Roads, to Indianapolis and Danville; or via the Erie, Atlantic and Great Western, to Dayton, Ohio; and via Indiana Central, to Indianapolis, Danville, Bloomington, &c.; as well as from Philadelphia, via the Penn. Central to Harrisburg, Pittsburg, Columbus, Dayton and Indianapolis.

It will form an important link in the communication of Baltimore and the South with the Great West, the North West and the Pacific, via Baltimore and Ohio Railroad, to Parkersburgh, Cincinnati, Indianapolis, Danville and Peoria.

Thus with the combined advantages of a certainty of a remunerative local business and a through business, which, as a connecting link to so many diverging and principal lines, it must necessarily have, it is reasonable to presume that the earnings of this road must exceed, in proportion to its length, those of any other railroad in Illinois. The following table shows the earnings of some of the principal railroads in Illinois:

Railroads.	Gross Earnings.	Miles road.	Earnings per mile.
Chicago, Alton and St. Louis	$3,892,861	280	$13,900
Chicago and Northwestern	11,712,248	1,152	11,670
Chicago, Rock Island and Pacific	4,105,103	410	10,012
Toledo, Wabash and Western	3,783,820	521	7,261
Illinois Central	7,160,991	708	10,115

It is safe to estimate the receips of the Danville, Urbana, Bloomington and Pekin R. R. for the first year, at $12,000 per mile, or on 117.05 miles, $1,404,600.

FIRST YEAR.

Receipts, as estimated		$1,404,600
Estimated expenses as follows:		
Operating expenses, 50 per cent	$702,300	
Interest on $2,000,000 gold bonds, 7 per ct.	140,000	
Premium, 40 per cent. on $140,000 gold	56,000	
Set aside as Sinking Fund	10,000	
		908,300
Leaving a net profit over interest and expenses		$496,300

or over 6 per cent. for dividends on the capital stock the first year of its operation. Without doubt, a progressive increase thereafter, each year, would be the result. The geographical location of the road is alone sufficient to convince all of its great value and usefulness.

The stock of the Rock Island and the Illinois Central, the Chicago and Alton, Burlington and Quincy Roads, are all selling at from above par to nearly 200, while none of them are more favorably located, and the competition of them all is much greater than this can have. There is no reason why the stock of this road shall not sell as high as either of the above. Hence the privilege of converting these bonds into stock of this Company at par at any time desired greatly increases their value.

After having personally and thoroughly examined this road, we accepted the agency for negotiating its bonds. We now offer them at 95 and accrued interest in currency. With the utmost confidence we recommend them as a reliable and safe security and profitable investment.

At the present price they pay 10 per cent. currency,—over 45 per cent. more than the same amount invested in Five-twenty Bonds,—besides the advantage of being free from tax, and the prospect of a speedy advance in the stock of the road on completion, into which they may be converted.

Government Bonds and Gold received at their market value in exchange without commission. Bonds forwarded by Express free of charge.

Full particulars furnished by the undersigned, Financial Agents of the Company.

TURNER BROTHERS, Bankers,
14 Nassau Street, New York.

New York, July 22, 1869.

☞ The gold coupons due August first on the first mortgage bonds of the Rockford, Rock Island and St. Louis Railroad, will be paid on and after that date at the office of the company, No. 12 Wall street.

Pacific Railroad Bonds.

A special dispatch to the *N. Y. Journal of Commerce*, dated Washington, July 16, says that United States bonds for $1,582,933 84, being the balance due the Central Pacific Railroad Company for the portion of their road beginning at the 570th mile post and terminating at the end of 690.3 miles east of Sacramento, were issued to day by order of the Secretary of the Treasury. This completes the full allowance of the Central Pacific Company to Promontory Summit.

For the distance between Promontory Summit and Ogden the title to the subsidy bonds is in dispute. This portion of the line is covered by that part of the Union Pacific Railroad which extends from the 1,000th mile post to the end of 1,085.88 miles west of Omaha, and the claim of the Union Pacific Company is now pending for the bonds. The controversy arises from a difficulty about the construction of the joint resolution of April 10, which says that "the Union Pacific Railroad Company shall build, and the Central Pacific Railroad Company pay for and own, the railroad from the terminus (at or near Ogden) to Promontory Summit." The subject will probably be referred to the Attorney General for his opinion as to which company shall receive the subsidy and land grant between Ogden and Promontory Summit.

Athol and Enfield Railroad.

This company was organized at North Dana, Worcester Co., Mass., on the 6th inst., by the choice of the following as a board of directors: W. Phelps, of Springfield, John C. Hill and T. H Goodspeed, of Athol, Edward Smith and Horace Hunt, of Enfield, John G. Mudge, of Petersham, E. A. Thomas, of Prescott, Constant C. Southworth, of Hardwick, S. P. Bailey, of Greenwich, J. R. Goodman, of North Dana, and Samuel Adams, of New Salem. Immediately after adjournment of the meeting the board of directors met and organized by the choice of Willis Phelps, of Springfield, as President, and T. H. Goodspeed, of Athol, as Clerk. A committee was also chosen to meet the officers of the Northern New London Railroad, to confer with them in relation to their aid and assistance in the construction of this road, which, if built, must be a great benefit to that road, and their liberal co-operation in this enterprise is confidently expected.

New York and Boston Railroad.

A company has been organized in New York, under the name of the New York and Boston Railroad, the object of which is to construct a railroad from the Harlem River, near its mouth, through Westchester County, about midway between the Harlem and Hudson River Railroads, to Croton Lake, thence to Lake Mahopac, Carmel and Brewster's in Putnam County. At or near the last named place it will connect with the Boston, Hartford and Erie Railroad, and thus open a new route between New York and Boston. The capital stock of the company is fixed at $1,000,000.—*Providence Journal.*

☞ The Cincinnati, Salem and Youngstown Railway project is being vigorously pushed by Zadoc Street and others. The road is to connect with the Pan Handle road, south of New Philadelphia.

☞ C. O. Davis has been appointed engineer of the Portland and Rochester Railroad, and will at once proceed to lay out the extension from Alfred to Rochester.

Wilmington and Western R. R.

The stockholders of this company have organized, and strenuous efforts are being made to carry out the provisions of the charter granted by the Legislature of Delaware, and the special act of the Pennsylvania Legislature. It is proposed at present to build the first section, from Wilmington, Delaware, to Chandlersville, in Chester County, at which point it will intersect the proposed road from Parkesburg to Delaware City. The other sections of the road will connect with Oxford, Peachbottom, Hanover Junction and Gettysburg, through the southern counties of the State.

☞ A correspondent of the Hagerstown *Mail* says that the Cumberland Valley Railroad Company will commence operations on the extension of their road from Hagerstown to Williamsport about the 1st of August, and expect to have it in running order by the 1st of December.

☞ The Allentown Iron Company, of which H. Cabot is Secretary, have declared a dividend of five per cent., payable at the office of the company, 105 Walnut st., Philadelphia, on the 26th inst.

Twelve Years to Run and Free from Government Tax. Interest Semi-Annually in Albany and New York.
Secured by a mortgage on the right of way, necessary real estate, superstructures, franchises and appurtenances belonging to, or which may hereafter belong to the company. They are also further secured by a sinking fund created and reserved for the payment of said bonds, from the annual net income of said company, which fund is pledged for the redemption thereof. Ten per cent. of the whole loan is to be retired annually, to be designated by lot by said trustees on and after the 1st day of May, 1871, at par. As this loan will go off rapidly, parties who wish to invest should apply at once.
Prompt attention paid to orders by mail or otherwise.
For the present the price is 85 per cent. flat.

NEW YORK.

OFFICE OF THE
Rockford, Rock Island and St. Louis Railroad Company.

The Coupons of the First Mortgage Bonds of this Company, matured August 1, proximo, will be paid on and after that date at the office of the Company, 12 WALL STREET, in
U. S. Gold Coin, Free of Government Tax.
H. H. BOODY, Treasurer.

A SEVEN PER CENT. GOLD LOAN.
$6,500,000.
The Kansas Pacific Railway now in successful operation from Kansas City to Sheridan, proposes to build an extension to Denver, Colorado. The Government has granted Three Millions of Acres of the finest lands in Kansas and Colorado, which are mortgaged for the security of a loan of
$6,500,000.
This loan is secured in the most effectual manner. It represents a road in profitable operation, and will open the trade of the Rocky Mountain country and connect it with the great markets of the East. It is considered to be one of the best loans in the market.
EVEN BETTER IN SOME RESPECTS THAN GOVERNMENT SECURITIES.
The loan has thirty years to run, principal and interest payable in gold, semi-annually in either Frankfort, London, or New York, and will be free from Government taxation. The bonds for the present are sold in currency at 96, with accrued interest.
Circulars, maps, and pamphlets sent on application.

Proposals for Bridging!
SEALED PROPOSALS WILL BE RECEIVED AT this Office until 12 M., Saturday, August 7, 1869, for the bridging and timber work on the line of the Tebo and Neosho Railroad between Sedalia and Clinton.
Bids on bridging will be per lineal foot. Bids on timber work, such as open culverts, road crossings, and cattle guards, will be per 1,000 feet B. M., in place.
Plans and specifications can be seen at this office. Bidders at a distance can obtain the same by correspondence.
Proposals for the entire line will also be considered. The right to reject any and all bids is hereby reserved. Bids should be endorsed "Chief Engineer, Tebo and Neosho Railroad. Proposals for bridging."

We keep constantly on hand a large and varied stock of general Railroad Supplies for Machine Shops, Track Work, Bridges, Car Building, etc. Orders solicited.

TO RAILROAD CONTRACTORS.

Memphis, El Paso and Pacific RAILROAD COMPANY.

Office of the Chief Engineer,
Memphis, El Paso and Pacific Railroad Company,
66 Exchange Place.
NEW YORK, June 8th, 1869.

SEALED PROPOSALS will be received at the above Office, until **September 1st, 1869,** when Contracts will be awarded, for the GRUBBING and CLEARING, GRADING, MASONRY, BRIDGING, BALLASTING, CROSS TIES and TRACKLAYING of the following portions of said Railroad:

FIRST—The last Fifteen miles on the First Division of One Hundred and Fifty Miles, between Jefferson and Paris, Texas, commencing Eight miles east and extending Seven miles west of the town of Clarksville, in Red River County.

SECOND—One Hundred and Fifty miles, embracing the Second Division, commencing at Paris and extending westward, to Palo Pinto County.

Specifications, Profiles, Maps and Plans can be examined after the FIFTEENTH OF AUGUST, 1869, at the ENGINEER'S OFFICE, in NEW YORK or JEFFERSON.

Proposals must conform to the specification which will be furnished upon application at either of the above places after August 1st, 1869.

Evidence of ability to complete contracts will be required and a percentage retained of estimates until each section of five miles is finished.

Work upon the First Division must be completed by March 1st, 1870.

The Second Division must be finished by October 1st, 1870.

Every facility will be furnished those wishing to inspect the ground on the line of the road, by application in person at the Engineer's Office in Jefferson.

J. M. DANIEL, Engineer in Chief,
Memphis, El Paso and Pacific R. R. Comp'y.

Notice to Contractors.

SEALED PROPOSALS, addressed to the undersigned, will be received until August 6th, 1869, for the GRADUATION, MASONRY and BALLASTING of the BUTLER BRANCH of the WESTERN PENNSYLVANIA RAILROAD, from Freeport, Armstrong County, 21 miles, to Butler, Butler County, Pennsylvania. Profile and specifications can be seen at the Engineer's Office, Freeport, Armstrong County, Pennsylvania, on and after July 26.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

Savannah and Charleston R. R.

The following is a copy of the Act passed at the last session of the South Carolina Legislature, entitled "An Act to enable the Savannah and Charleston Railroad Company to complete their Road:"

SECTION 1. *Be it enacted*, by the Senate and House of Representatives of the State of South Carolina, now met and sitting in General Assembly, and by the authority of the same, That the Savannah and Charleston Railroad Company is authorized and empowered to borrow and raise the sum of not more than five hundred thousand dollars, to be used in extending and rebuilding their road under the provisions of their charter.

SEC. 2. That for this purpose the said company is hereby authorized and empowered to issue bonds to the amount of not more than five hundred thousand dollars, payable twenty years after the date thereof, with coupons attached for interest at the rate of seven per cent. per annum payable semi-annually.

SEC. 3. That the said company is hereby further authorized and required to fund and redeem the coupons for interest of the bonds of the Charleston and Savannah Railroad Company guaranteed by the State, now past due, and that may fall due on or before the first day of September, 1869, by issuing therefor an equal amount of their bonds, with coupons attached for interest, payable semi-annually at the rate of seven per cent. per annum, and the principal to become due in twenty years after the date thereof. And the payment of said bonds, so to be issued in substitution for interest coupons shall be guaranteed by the State in the same manner and as fully as the original bonds of the Charleston and Savannah Railroad Company are now guaranteed, subject, however, to the provisions of section 6 of this act.

SEC. 4. The bonds hereinbefore authorized for rebuilding said road shall be used exclusively for the building thereof and the outfit of the same; no salary shall be paid to any officer of the said road out of the funds so raised by this act.

SEC. 5. The said railroad company shall deposit the interest on all their aforesaid bonds, as it becomes due, with the financial agent of the State of South Carolina, in the city of New York, and shall notify the creditors of the same by public advertisement in one newspaper in New York, one in Charleston, and one in Savannah, and if said company shall fail to pay the interest on its debt, within six months after it shall have become due, or fail to pay or provide for the payment of the principal of its debt, within six months after it shall have become due, it shall be the duty of the Comptroller-General of the State, and he shall have the power to take immediate possession of said road, with all its appurtenances, and lease the same to responsible parties, who shall have control thereof, until the General Assembly shall, by law, provide for the settlement of the affairs of said company to the interest of all its creditors. The Governor of the State is hereby authorized and empowered to appoint two directors to represent the State in the direction of said company.

SEC. 6. That the present lien of the State of South Carolina on said road shall, upon the issue of the bonds provided for in and by the first section of this act, be postponed and become a second lien, which said second lien shall extend over and cover the whole road, its outfit and real estate, as fully as is already provided for by law. The said road shall be completed by the first day of January, 1870.

SEC. 7. This act shall not be of force until said Savannah and Charleston Railroad Company shall consent to the amendment of their charter, so that the property of said corporation shall be subject to taxation in conformity with section 2 of article 12 of the constitution, and said consent be certified, under the seal of said company, to the Comptroller-General and Secretary of State. Upon the filing of said consent, the said charter shall be deemed and held to be modified, in conformity with said section of the constitution: Provided, that no tax shall be assessed or levied upon said road until the same shall have been completed.

In the Senate House, the second day of March, in the year of our Lord one thousand eight hundred and sixty-nine.

CH. W. MONTGOMERY,
President of the Senate *pro tempore*.
FRANKLIN J. MOSES, Jr.,
Speaker House of Representatives.

—

I certify that this act originated in the Senate, was presented to the Governor for his approval, Wednesday, March 3, 11:30 A. M., and has become law by failure of its return to the Senate within the time prescribed by the Constitution of the State.

(Attest) J. WOODRUFF, Clerk of Senate.

—

SECRETARY OF STATE'S OFFICE,
COLUMBIA, S. C., March 8, 1869.

I, F. L. Cardozo, Secretary of State of South Carolina, do hereby certify that this is a correct copy of an act entitled "An act to enable the Savannah and Charleston Railroad Company to complete their road," filed in this office.

Given under my hand and the seal of the State, in Columbia, this 8th day of March, A. D. 1869, and in the ninety-third year of the independence of the United States of America.

F. L. CARDOZO,
Secretary of State South Carolina.

—

At a meeting of the stockholders of the Savannah and Charleston Railroad Company, duly called and held in conformity to the provisions of their charter and by-laws, on the seventeenth day of March, 1869, the following resolutions were duly proposed, considered and adopted, and were ordered to be entered on the minutes of the company, which has been done accordingly:

1. *Resolved*, That this company do hereby accept and consent to the amendment of their charter, made by an act of the General Assembly, duly ratified on the 2d day of March, 2869, and entitled "An act to enable the Savannah and Charleston Railroad Company to complete their road," and especially the seventh section of said act, which is in the following words: "Section 7. This act shall not be of force until said Savannah and Charleston Railroad Company consent to the amendment of their charter, so that the property of said corporation shall be subject to taxation in conformity with Section 2 of Article 12 of the constitution, and said consent be certified under the seal of said company to the Comptroller-General and Secretary of State. Upon the filing of said consent the said charter shall be deemed and held to be modified in conformity with said

section of the constitution, provided that no tax shall be assessed or levied upon said road until the same shall have been completed."

2. *Resolved*, That the President of this Company is hereby authorized and directed to certify under the seal of the company, the foregoing acceptance in proper form to the Comptroller-General and Secretary of State, pursuant to the requirements of said act.

The Suez Canal.

Mr. J. B. Moore, late chairman of the Liverpool Dock and Harbor Board, who has recently made a personal inspection of the Suez Canal, made an interesting statement concerning that great work before the Liverpool Chamber of Commerce on the 28th of June. The following is a sketch of his remarks:

The points of importance that had chiefly struck him were, in the first place, the continuance of a fresh water supply throughout the whole course of the works, for without it neither men nor beasts could live. The want was supplied between Suez and Ismailia by the Sweet Water Canal, and between Ismailia and Port Said by two lines of water pipes made at Glasgow. These two lines of pipes supplied the men with fresh water all along the banks of the canal from Ismailia to Port Said, and if they were smashed with a hammer at any point, the whole of these people would not have a gallon of fresh water. It was a matter for serious consideration hereafter how they could prevent such a calamity in times of political difficulty.

At Ismailia, which is the centre of the Suez Canal works, he found everything in a perfectly organized and beautiful condition. He had inspected the whole of the works from Ismailia to Port Said. The piers at the latter place were formed by large blocks of pressed sand, thrown together promiscuously; and, from his experience with dock works at Liverpool, he feared the sand would silt through them, and that great expense would, in consequence, have to be constantly incurred in dredging the harbor. One of these piers is nearly 1½ mile long. The full width of the canal, 100 metres, had not yet been carried out the whole distance between Port Said and Ismailia. In some places the width was not more than 60 metres, and it would be a difficult matter for vessels meeting to pass. In fact they could not do so unless sidings or embayments are made at intervals. He returned to Ismailia in a steam launch. He thought there was a uniform depth all the way of about 26 feet, except near Kantara, where there was a large sand bank in the middle, which the workmen were then (about three weeks ago) dredging.

Continuing the trip from Ismailia towards Suez, he crossed Lake Timsah, and again entered the canal, down which he proceeded to Toussoum, where the water shallowed very much. It was still worse at Serapeum, where three or four dredging machines, if not high and dry, were fast in the sand. This continued for a distance of 12 or 14 miles. Here his party had to leave the boat and take to donkeys, which mode of progress they continued to the Bitter Lakes, a distance of 8 to 10 miles, so that there were about 20 miles of shallow, which was no doubt partly caused by the water draining off into the Bitter Lakes. If these lakes could be filled it would be a very fine thing, but he thought the process would be a very long one. From the Bitter Lakes to Chulouf they had to take the railway.

At Chulouf, when he visited it, they had still about nine miles of rock to get through, and that had to be cut through the full width and depth of the canal. Seven thousand men were at work, and they could, no doubt, do an immense amount of work, but he did not think it was possible that the canal could be made navigable for ships by November. He did not wish to throw any doubt on the ultimate success of the great work. There was no doubt time and money would do it, but he believed it was impossible to accomplish it in the time which had been stated; that he calculated that at least four millions of money would be required to complete it. The accumulation of drift sand in the canal was a serious difficulty. At one place within twelve months 40,000 cubic yards of drift sand had accumulated, and at another place, in the same time, 270,000 cubic yards. The dredges would, no doubt, take it up, but there was the fact.

Old Colony and Newport Railroad.

The income of this road for the years ending May 31, 1868 and 1869, was as follows:

		256,899 75
Net income		$346,551 68
Balance of income per last report, (less debts charged off as worthless $2,027 70)		193,556 25
Total		$540,107 93
Deduct dividends January and July, 1869, 3 per cent. each, and U. S. tax		312,252 64
Balance May 31, 1869		$227,855 29

There have been paid during the past year the balance of bonds which matured December 1 1867, $2,000; April 1, 1868, $1,000; April 1, 1869, $50,000; and the notes payable have been reduced $10,000—making the aggregate reduction of indebtedness, $63,000.

Compared with the previous year the gross receipts show an increase of $79,845 84; with an increase in working expenses of $23,683 76—making the increase in net earnings, $56,162 08. The amount paid for interest and taxes is $23,753 44 in excess of the previous year. The increase of net income, after payment of interest and taxes, is therefore $32,408 64.

The increase in the number of passengers carried was 393,745, in the mileage of do., 6,643,720, and in the amount received therefrom, $69,004 22. The increase of tons carried was 49,931, in the mileage of do., 1,581,483, and in the receipts therefrom, $39,996 89. Of the increase from passenger receipts, $41,040 55 was from the local business, and $23,656 14 from the New York business. The local freight receipts have increased $40,778 92; and the receipts from freight in connection with New York have fallen off $8,298 76. The increase in number of miles run by trains was 44,061. The report says:

One new locomotive, 5 new passenger-cars, 2 new baggage and 24 new freight cars have been added to the equipment of the road during the past year, and charged to the current expenses, except the cost of the locomotive,

Seven locomotives, 9 passenger and 11 freight cars have been substantially rebuilt.

About 650 tons of new rails and 39,339 new sleepers have been used in repairing the track.

During the past three years, new and additional side tracks have been built at different points on the line of the road to the extent of 9½ miles.

The increased expenses of operating the road the past year have been about $23,000. The miles run have been 44,000 more than the previous year.

New passenger and freight depots have been built at Crescent Avenue, Quincy, South Weymouth, and North Stoughton, and new car-sheds at North Bridgewater, Middleboro', and North Easton, and new turning tables at Boston, South Braintree, and Bridgewater. Large repairs have been made on depots, car or engine houses at South Braintree, North and South Abington, Bridgewater and Middleboro."

When the passenger depot and other improvements, now in progress at Plymouth, shall be completed, our depot accommodations will be in good condition; while the train accommodations and rates of fare and freight, it is believed are generally satisfactory.

During the past year, although considerable business has been done between Boston and New York, over our road, yet, by reasons of low fares and low rates of freight, it has yielded but little profit to the corporation. Arrangements have recently been made, leading to the withdrawal of the boats of the Boston, Newport, and New York Steamboat Co., the discontinuance of the Bristol line, and the establishment of a new line over our road, in connection with the boats of the Narragansett Steamship Co. at Newport and Fall River.

The ruinous competition which for the past two years has so injuriously affected all engaged in the business of transportation between Boston and New York will thus hereafter be avoided; and the directors believe that the business is now established upon a sound basis, and confidently expect that the future will show a considerable increase in our New York business at remunerative rates.

The directors, deeming it for the interest of our road to obtain a closer connection with the South Shore Railroad Company, have made arrangements to that effect.

The business of the Dighton and Somerset Branch continues gradually to increase. The gain the past year has been $25,165 40.

That portion of the land at South Boston referred to in the last report, which now remains unsold, yields an annual rent of about 5,000. It has a prospective increase in value, and furnishes sufficient present income to more than cover taxes and expenses.

The value of the entire land was then estimated by the directors at . .	$300,000 00
There has been received for sales since the last report	108,762 00
Awarded by the City of Boston for Broadway extension	23,387 65—132,149 65
Leaving unsold at the then valuation	$167,850 35

The directors see no reason to lessen that valuation.

A second track between Somerset Junction and Fall River would greatly facilitate the movement of trains, and it may be deemed expedient to construct it at an early day. The distance is a little less than four miles. The grading would cost about $20,000, and materials and laying of the track about $35,000; or about $55,000 in all.

The advantages of providing for a new and di-

rect line of communication between Boston and Provincetown over our road, by way of Plymouth, has been brought to the attention of the directors by prominent citizens of those towns; and it has been urged that such an arrangement would be advantageous to our road. They propose to build a wharf at Provincetown, and provide steamboats to run in connection with our road, and wish us to build a suitable wharf at Plymouth, which is estimated to cost about $15,000. The directors have the subject under consideration.

The equipment of the road is as follows: 24 passenger and 11 freight locomotives; 64 passenger, 18 baggage, 159 long box, 194 long platform, 9 cattle, 7 short box, 37 short platform and 90 coal and gravel cars. Number of miles run by passenger trains, 608,848; by freight trains, 232,552; by gravel trains, etc., 38,467—total, 879,867. Number of passengers carried, 2,382,348; do., carried one mile, 40,214,034. Tons of merchandize carried, 321,717; do., carried one mile, 11,028,842.

President.—HON. ONSLOW STEARNS.

Directors.—Onslow Stearns, Uriel Crocker, Benjamin Finch, Francis B. Hayes, Oliver Ames, Samuel L. Crocker, John S. Brayton and Minot Tirrell.

Treasurer.—JOHN M. WASHBURN.

Superintendent.—W. H. BULLOCK.

Baltimore and Potomac Railroad.

The engineers under the direction of Captain Moore have been for some days past reviewing the line on the southeast side of this village. The question of location not having yet been decided, much anxiety is felt by our citizens. In the meantime we are sorry to say that the frequent interruptions growing out of the right of way, from injunctions, &c., have seriously embarrassed the officers of the company; and while the work on that part of the road between Baltimore and this town may not be very greatly retarded, we learn from good authority that no contracts will be entered upon for work south of Marlboro' until all questions of right of way and damages shall have been fully adjusted, so that contractors may not, as has been the case, be compelled to abandon work on some of the sections to await the decision of the Courts. This determination of the company, while it does not weaken our faith in the ultimate completion of the entire line to the Potomac, is likely to lead to a delay of many months. The company was led to believe, before the work was commenced, that little or no difficulty would be experienced in this particular. Indeed, the public sentiment seemed to be that a large majority of landholders would freely give the right of way. In this they have been sadly disappointed. We shall not undertake to argue with those who thus attempt to jeopardize so great and important an undertaking. It is a policy we do not understand.—*Marlboro' Gazette of July* 14.

Hudson and Harlem Rivers Canal.

Some five years ago a company was formed and a charter obtained to connect the Hudson River with Long Island Sound, and to form a channel navigable by the largest ship between Spuyten Duyvil Creek and Harlem kills. Nothing was actually done, however. Within the past few weeks a number of persons have undertaken to revive the enterprise. A channel navigable to the Hudson from Long Island Sound is to be excavated, the most difficult portion of the undertaking being the removal of the Harlem kills and the work on the channel between Randall's Island and Westchester County. This channel will have 12 feet of water in at low tide, and will be proportionately wide so as to admit of a free and uninterrupted passage by grain and other vessels from the East to the North River. The capital of the newly formed company is to be $1,000,000. The expense to be met before a ship can pass through the channel is expected to be over $1,000,000. The office of the company is at 14 Park Place, N. Y., the directors are: J. A. Henderson, S. C. Walker, John W. Allen, Henry Smith, Milton Courtright, Geo. M. Van Nort, Henry W. Genet, C. Godfrey Gunther, Leonard W. Jerome, Smith M. Weed, Wm. M. Tweed, Hugh Smith, Jas. M. Sweeny, Gilbert Palmer, Cornelius Corson, Chas. E. Wilbour, W. H. King, Isaac Bell. The officers are: M. Courtright, President; E. H. Fairchild, Secretary; J. N. Allen, Treasurer; Executive Committee—W. M. Tweed, Wm. H. King, C. G. Gunther, Hugh Smith, Jas. A. Henderson; Engineer—Isaac D. Colmans.

Rutland Railroad.

The decision of the Court at Vergennes, Vt., on the petition of the Rutland Railroad Company for possession of the road, which was opposed by some of the first mortgage bondholders of the old Rutland and Burlington, leaves the matter as before the petition was made, the property being still in the hands of the Trustees of the second mortgage bonds. Nearly all the second mortgage bonds have been converted into common stock of the Rutland Company, and over $1,000,000 of the $1,800,000 first mortgage bonds have been converted into preferred stock. The Rutland road ask for possession, as they hold that they can manage more profitable than the Trustees, by increasing the rolling stock and doing more business. This has been denied them and the case remains in the lawyers' hands, and may be there for years to come. In most cases of contention for rights claimed equitable compromise is judicious, and we do not believe this an exceptional one. Even if the first mortgage bondholders could eventually, years hence perhaps, obtain every dollar of principal and all back interest, a fair settlement now would undoubtedly result more to their benefit than a long legal controversy, with its attendant costs and troubles. The experience of other roads would certainly confirm this view of the matter.—*Boston Journal.*

☞ The Union Pacific Railroad Company have received $640,000 worth of Government bonds for the twenty miles ending at 1020 miles from Omaha. About fifteen miles brings the subsidy up to Ogden. It seems that both Secretary Cox and Secretary Boutwell are convinced that this company is doing the fair thing, and means to put the road in first-class order throughout.

West Virginia Central Railroad.

In the general interest manifested in all portions of our State for the speedy construction of that great thoroughfare, the Chesapeake and Ohio railroad, the West Virginia Central railroad, scarcely second in importance for the benefits to be derived by the State in general and the Kanawha Valley in particular, seems to have been almost entirely overlooked and forgotten by the people. Not so, however, with the stockholders and directory of the company. They have eagerly "watched and waited" for the Chesapeake and Ohio Company to complete arrangements for constructing the unfinished portion of their road to Charleston. We now learn that these arrangements have been, or will be within a few weeks, consummated with one of the Pacific railroad companies. This fact has stirred the West Virginia Central to action, and we now have the gratifying intelligence, from a source that may be considered reliable, that the company has about completed arrangements for building the road from the Pennsylvania line through the heart of West Virginia to Charleston, the future capital, thence to the Kentucky line at the mouth of Big Sandy.

The bonds of the company are secured by a mortgage of all the rights, franchises, &c., belonging to said road under its charter, and are to be further secured by the endorsement of the Pennsylvania Railroad Company. The Hon. John M. Phelps, one of the directors of the West Virginia Central Company, left this place on Monday evening for the purpose of visiting the different counties through which the road will pass, and having the mortgage referred to recorded in those counties. These facts taken in connection with that, that the stock of the Pennsylvania Central is at a high premium, will be a sufficient inducement to capitalists to take the bonds of the company as a safe investment, and will, without doubt, insure a speedy sale for them at little or no discount.—*Mason County* (West Va.) *Journal.*

Pacific (Mo.) Railroad.

The entire track of this road, extending from St. Louis, Mo., to Leavenworth, Kansas, a distance of 318 miles, was changed from the broad to the narrow gauge on the 18th inst., in the brief space of 16 hours. The track was 5 feet 6 inches in width, and it became desirable to alter it to 4 feet 8½ inches, so that it would conform with the tracks of other railroads, a number of which connect at Kansas City. Extensive preparations were made for the change; new engines and cars were purchased and many cars altered. Two hundred and seventy-eight men were engaged in addition to the large force in the employ of the company, and the whole were detailed to do the work on different sections of the road at the same time. The work began at four o'clock in the morning, and by eight in the evening all of it was completed. The change was made without losing a single train.

St. Joseph and St. Louis Railroad.

A St. Joseph paper says the work on this road is being pushed forward with vigor. On the first ten miles of the road, from Lexington to Richmond, the cars are already running. The route has been located twenty miles from Richmond in the direction of Plattsburg, and the contract for the grading let to Messrs. Axtell and Scoville, who have a large force at work, and are prosecuting the enterprise with the utmost energy. The passenger cars and other rolling stock are already on the other end of the route, while the iron is now arriving at Hannibal, from New Orleans, by boat. The chairs and spikes for the road are already on the ground. Track laying will be commenced on this end of the road in a few days, and on the southern end at a very early date.

Michigan Railroads.

The citizens of Lansing, Dansville and St. Johns, Michigan, are consulting with the people of Toledo, Ohio, as to the construction of a road from Manchester, on the Michigan Southern, north, crossing the Michigan Central at Chelsea, 22 miles east of Jackson, and thence to Lansing and through St. Johns, on the Detroit and Milwaukee, to St. Louis and Mt. Pleasant, to the north line of Isabella County. The portion of the line north of Lansing has an organization with the requisite five per cent. of stock paid in. Like steps will at once be taken on the portion south of Lansing. The distance from Toledo to Lansing by the proposed line will be 100 miles, with about 50 miles to be built; and that from Lansing north 80 miles; making the total distance from Toledo to the north line of Isabella County 180 miles.—*Railroad Record.*

Mexican Railway.

The eighth ordinary general meeting of the shareholders of this company was held in London on the 30th of June. The following report was taken as read:

REPORT OF THE DIRECTORS.

Referring to their report presented to the Shareholders at the general meeting of the Company held on the 30th December, 1868, the Directors have now the satisfaction of stating, that the arrangements then mentioned as being in progress were in due course concluded, and that a sufficient provision of money was made, by the issue of class A mortgage bonds, to complete the line to Puebla, and to free the Company from all its pressing liabilities in this country and in Mexico. Owing to the severe illness of the engineer to the contractor, and the pressure thus caused upon the time of Mr. Buchanan, the chief engineer to the Company, the Directors are without the usual report of their consulting engineer, Mr. Samuel; but they are advised in general terms by the agency in Mexico, that with the funds thus raised, the works upon the line between Puebla and the junction at Apixaco are in active progress; and no doubt whatever was entertained in Mexico, at the date of the latest advices, that the line in question would be in a state of forwardness sufficient to admit of its being opened for public traffic on the 16th September next, the anniversary of the declaration of Mexican Independence. The repairs and general reinstatement of the lower line between Vera Cruz and Paso del Macho were also well in hand, whilst measures were being taken to proceed with all practicable speed with the construction of the works through the Chiquihuite pass towards Fortin. The relations between the Company and the Government of Mexico continue to be of a cordial and satisfactory character, and the sums due to the Company under the assignment upon the Customs duties, and the 'Mejoras Materiales' subvention, are in course of regular collection by the process described on former occasions. From January 1st to March 31st, 1869, there was received on the former account a sum of £29,250 8s. 3d.; and on the latter, from February 1st to the same date, a sum of £7,295 16s., in conformity with Article 19 of the Decree of the 10th of November, 1868. The following statements show the traffic receipts and charges upon both of the opened lines, month by month, during the year 1868. The result does not indicate the satisfactory progress that was hoped for, from a pecuniary point of view, owing to the continued stagnation in the general trade of the country, the very defective condition of the lower line, and, as regards the upper line, almost entirely to the reduction which was made in the tariff of charges in the month of March, 1868. The board have no reason, however, to doubt that much better results will follow the opening of the line to Puebla, and that the traffic on that line will be considerably increased, first, by the reinstatement and equipment of the lower line to Paso del Macho, and secondly in a much greater degree, by its completion to Fortin. Under existing circumstances but little of the traffic passing over the lower line, *en route* for Mexico, is carried on the Apixaco section.

Statement of the traffic receipts, expenses, &c., on the railway from Mexico to the Puebla Junction at Apixaco, (86 miles), from 1st January to 31st December, 1868:—

1868.	Gross Receipts. £	Rate per mile per week. £ s. d.	Working expenses. £	Net profit. £
January	9,901	25 19 11	4,909	4,992
February	7,668	21 10 4	4,177	3,490
March	8,875	23 5 11	5,504	3,371
April	6,881	18 13 4	4,147	2,734
May	7,876	20 13 7	4,042	3,834
June	6,774	18 7 6	4,384	2,389
July	6,543	17 3 7	4,705	1,838
August	7,259	19 1 2	4,630	2,629

October	2,507	12 0 10	2,634	L	128
November	2,661	13 4 2	2,569	P	92
December	2,719	13 1 3	2,737	L	19
Total	43,921	Avge. 17 19 5	39,421		4,501 profit.

The accounts for the year ended 31st December, 1868, are appended to this report, after due examination and audit. The money raised by the issue of the class A mortgage bonds and the appropriation thereof, as before mentioned, will be brought to account upon the books of the present year; but there still remain to be noticed the large sums, amounting to £934,689 8s. 9., as stated in the liabilities, (exclusive of £369,712 4s. 1d. accrued interest,) expended upon the works and for the general purposes of the Company, through the assistance of those friends of the Company, whose claims were voluntarily postponed upon the occasion of the issue of class A bonds. All the receipts of the Company (except those pledged to secure the £560,000 class A mortgage bonds, and the loan of £220,000 made upon the security of the same) are, of course, liable for these debts; but with the consent of the creditors, these sums are being employed at present in the active prosecution of the works; and in order to secure these fresh advances, and for the general purposes of the Company, the Directors will avail themselves of the authorization granted to them in October last, by issuing class B mortgage bonds, to be charged upon the profits of the lower line from Vera Cruz to Fortin, similar in their principle to the class A series charged upon the profits of the upper line. Mr. George Woolcott, who had previously signified to the Shareholders his intention to offer himself for the auditorship vacated by Mr. H. H. Stansfeld, has upon request kindly inspected the accounts for the past year on behalf of the Shareholders, in conjunction with Mr. B. H. Adams, at present the sole auditor of the Company. Mr. Adams offers himself for re-election.

The receipts on the Apixaco section amounted for the half-year ending 31st December, to £42,543, the expenses to £28,606, and the net profit to £13,937.

The CHAIRMAN said—Gentlemen, the information we have to submit to you on the present occasion is contained in the report, and with the advices we received yesterday from Mexico, will, I hope, not be unsatisfactory to you. When you were here six months ago, we had then to report to you that our endeavors to obtain, under the powers which you had previously granted to us, the means necessary to discharge the minor debts of the Company and to provide funds for the purpose of carrying on the works upon the line from Apixaco to Puebla had not been successful. But we informed you that negotiations were in progress which we hoped would result satisfactorily. That has been the case. By the issue of class A mortgage bonds, which you empowered us to create, we were enabled to make arrangements with the great body of the creditors of the Company, except with the larger creditors, who acted together in the interests of the Company, and to provide a sum of money sufficient to complete the line from Apixaco to Puebla, and which we hope will also go some way to restore the condition (including the erection of a suitable bridge) of the lower part of the line. I have said that we have had more recent advices from Mexico. Those advices reached us yesterday, and by them we are informed that the line from Apixaco to Santa Ana is now open for traffic. That is a portion amounting, I believe, to about eight miles of the line from Apixaco in the direction of Puebla. We are further informed that the greatest activity prevails on the Puebla branch generally. We have not the least reason to doubt that the line will be opened for public traffic to Puebla on the 16th of September next, a day which has been selected by the Mexican people themselves, because it is a great anniversary of theirs. We have also before us extract from a Mexican newspaper, which it will be interesting to you to hear read:—Extract from the *Revue de Quinzaine*, of the "Trait d'Union," dated May 28, 1869. "A new section of the Vera Cruz railway was inauguated the day before yesterday. It is the section from Apixaco to Santa Ana Chiantempam. A great number of guests attended the ceremony, which was brilliant, and excited great enthusiasm. The railway Company deserves great praise for the efforts which for some time it has been making. The line is excellent, and constructed with a solidity which allows of no disadvantageous comparisons with the best European lines. We admired an iron bridge thrown over a torrent, which is truly remarkable as a work of art. It is 80 metres (262 feet) long, and 20 metres (65 feet) high, and is the work of Mr. Buchanan, the engineer of the Company. The inauguration of the section from Santa Ana to Puebla will take place on the 16th September next with great solemnity." That is, of course, a satisfactory announcement to us, because it shows we shall very soon be placed in the possession of the advantages we have always been led to expect would arise from the connection of the city of Puebla with the city of Mexico by rail. I have so often referred to the nature of the traffic which comes upon that line, that it is hardly necessary for me to go over the subject again now. But I may state in one or two words that the city of Puebla, as is the city of Mexico, is one of the principal cities of the Mexi-

can Republic. It is a populous and a rich city, and its population depend for a considerable portion of their daily supplies upon the country that lies in the neighborhood of our line. The traffic which we have heretofore carried on that line has been almost entirely a local traffic, that is, a traffic consisting of the conveyance to Mexico of the products of the country. We are told that we may ultimately expect a very considerable traffic of the same kind arising upon the completion of the line to Puebla, in the direction of that city. Besides that, there will be a traffic between those two cities themselves, which I believe will not be at all inconsiderable. That is not the only advantage we shall derive from the opening of the line to Puebla. It stands upon the highroad of communication between Vera Cruz and Mexico. At the present time so much of the traffic as goes up from Mexico to Vera Cruz by that high road, passes through Puebla, and of that traffic no very great portion finds its way to our railway at Apixaco. The muleteers, and others who have the conduct of the traffic upon the road, find it as well to carry their goods on to the city of Mexico instead of taking them to Apixaco; but having the railway at Puebla at their disposal they will have the inducement to immediately discharge their loads and place them upon the railway. The traffic for the months of January, February, March and April is a fair average of what we have been accustomed to receive, considering it as a purely local traffic. The amount received is not so large as it would have been, because of the reduction in the rates which was made about the month of March last year. The quantity of goods carried remains pretty much the same, and I apprehend we shall find there, as most railways have done, that the true interests of the line consist in obtaining from the trade of the country such rates as the trade can afford to pay. The more we can serve the commerce of the country, the more will the railway in its turn benefit by any concessions it makes to the public. With regard to the line from Vera Cruz to Paso del Macho, that is the line which has been so long in a defective condition. The principal difficulty in carrying the traffic upon that line arose from the imperfect state of the bridge over a considerable river near Soledad. That is now being replaced by an iron bridge, and I hope we shall gradually place the line itself in a condition of perfect security, and be able to carry again, as we did before, a considerable part of the external commerce of Mexico in its course towards the interior. Still a very considerable portion of the goods brought into the country finds its way into the interior by another direction, without coming at present upon our line. It is therefore a very great object with us to complete as speedily as we can that portion of the line from Paso del Macho up to Fortin. As soon as we have effected that arrangement, and can carry goods up to that point, we shall at once bring upon our line the greater part of the external commerce of Mexico. Having done that we shall also benefit in a very great degree the traffic on the line from Puebla to Mexico. We have told you in the report the whole of the traffic which has been received during the past year, and when we consider the state in which Mexico was in the early part of the year, and the extent to which the trade of the country has been affected by the condition of the country, we have really no reason to complain of the amount of traffic which we have received. There is another subject of considerable interest to us, and I am glad to say, of some congratulation to us, which has been brought prominently before us by the letter which we received yesterday. We have stated in our report that we had received under our arrangement with the Mexican Government on account of the 15 per cent. customs duties assigned to us the sum of £29,250. We are now informed that the receipts in the month of April amounted to the large sum of £12,461, making a total of £41,712 paid to us by the Mexican Government during those four months as their subscription towards the capital of the Company for which they receive shares. We have also, as you are aware, a sum of $560,000 a year, charged in another form upon the customs duties. We tell you in the report that between the 1st of February and the 31st of March we received £7,295. We received in the month of April on that account £7,036, making a total of £14,331 under that head; so that from the 1st of January until the 31st of April we received a sum of not less than £56,043. We state to you in our report that our relations with the Mexican Government are of a cordial and satisfactory character. That is certainly so far as regards the fulfilment by the Mexican Government of the engagements entered into, and they are of the same character also in reference to our general understanding with the Mexican Government. You are aware of the mode in which those sums are collected by us at the ports; and it is not necessary to enter into detail upon it. The next subject to which I have to call the attention of the meeting is perhaps the least satisfactory, and that is the state of the capital account. Taking the accounts from the commencement, you will find we give you revenue accounts, showing the whole of the receipts, and also the expenses of working and maintenance. The balance of profit earned, £29,438, is carried to the credit of profit and loss account; and with that also, the proportion which belongs to the Company of the sum received from the Mexican Government, on behalf of the Mejoras Materiales. It amounts to £19,312. On the other side, the profit and loss accounts are charged with the ordinary expenses of the Company, and interest which has accrued upon the loans of the Company, during the year, leaving a balance to the debit of profit and loss account of £202,587. That again is brought into the balance sheet, which shows the whole of the sums received by the Company to the date at which the accounts are made up, and the sums also which are due to creditors. On the other side you will see the value that the Company has received for the money. Large as the amount of debt on the part of the Company may be, we know that you will have value for the whole of it. Not only have we now two lines open to a certain extent, and other portions about to be opened, but we have also a considerable amount of work done on those portions of the line which are not yet approaching completion. The works I refer to were necessarily suspended at the time of the Mexican difficulties. The extent to which they had been carried on was shown in great detail in the report which was presented to you some time ago under the signature of Colonel Bressonnet, a French engineer. This was a survey made for the Government by an independent authority, which I am told may be perfectly relied upon, and it shows that we have a considerable amount of work done in the nature of earth works. So that in one way and another, we may say that for the money we have received from the Shareholders, and others to whose assistance we are so much indebted, there is ample value in work in the country. I have had a statement prepared showing exactly how we stand with regard to the share capital. A considerable portion of the amount not paid is in course of arrangement now between the Company and the gentleman who has a large claim upon us for land which has been delivered to the contractors under the original agreement. When he pays his calls we shall pay for the land, and that will form part of the sum due on call account. There are other shares which were settled at a very early period of the Company's history, as was fully explained in the accounts submitted to the Shareholders at the time, amounting to £71,376. Those shares we shall have formally to ask you at some future meeting to cancel, so that the whole amount of calls remaining unsettled may be considered to be about £28,000. When we bear in mind the time when the share capital was allotted, and what the mercantile world has gone through since, I think we ought not to be much surprised to find that the sum we have still to recover from our Shareholders is £28,000, out of a sum of £950,000. Many of those by whom that money is owing to us are now in a position of inability to pay; some are dead, some are bankrupt, some insolvent, and others have entered into deeds of arrangement. But we are constantly endeavoring to recover, as we can, the whole sum due to us, and I think the Shareholders may well be satisfied with the position of the share account. The remaining subject I have to bring to your attention is referred to in the last paragraph in the report, in which we inform you that under the powers granted to us, we propose to create, whenever the time shall arrive for the purpose, bonds upon the lower part of the line, of the same character in principle as those upon the upper line, and in respect of them we shall, of course, see that we have value for all we may do in that respect.

Mississippi, Ouachita and Red River R. R.

We hear that work was commenced on the M. O., & R. R. Railroad, on the 1st of July, at Eunice. We consider that there is not the shadow of a doubt about this road being speedily built, and that it will be pushed forward with the greatest diligence we verily believe. Even if Messrs. Sickles & Co. should decide not to comply with their contract, we understand that another company, is now standing ready to take up the work the moment that indication is given of a desire to give it up by the present contractors. In October work will commence here and progress westward. In common with all our people, we look forward with much anxiety to the day when our hills and valleys shall reverberate with the sound of the whistle of the locomotive.—*Camden (Ark.) Journal.*

☞ Nameless county, Nebraska, has voted to donate $250,000 to the St. Louis Trunk and the Brownsville, Fort Kearney and Pacific Railroads. Both roads will be built through the county next year. The latter is an extension of the Quincy and Brownsville Railroad. The work is progressing on both lines.

☞ The section of the Boston, Hartford and Erie Railroad, between Putnam and Willimantic, will be in running order before the close of the present year. The great bridge over the Quinnebaug at Putnam, containing two spans of 150 feet each, and to cost $100,000, is nearly finished.

☞ The stockholders of the Derby Railroad have authorized the issue of $225,000 in mortgage bonds of their road, which will be endorsed by the city of New Haven, and the proceeds are expected to be sufficient to complete the road.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterick (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterisk* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in *"Italics."* State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, July 31, 1869.

Stock Exchange and Money Market.

The Money Market has been more liberally supplied with capital seeking profitable employment, since our last, and rates have favored borrowers in good standing, having been from 5@7, generally at 6@7 per cent. on call, and 7@9 per cent. per annum in the discount form. The city banks have added nearly 2¼ millions to their legal tender reserve, now holding 54¼ millions, as against 46¾ millions four weeks ago. They have also shown an enlargement of their deposit average to the amount of nearly 5¼ millions, making the aggregate of this item 193⅝ millions, against less than 180 millions on the 3d inst. The specie hoard has been reduced nearly a million, within the week. The loan and discount average shows an increase of about 2⅝ millions. According to the official reports of the National banks of the whole country, as to their condition on the 12th of June, it appears that with an aggregate capital of 422⅝ millions, the aggregate deposits of all the banks, were $587,063,339; the legal tender reserve was $80,934,119; the reserve of three per cent. certificates, available for Clearing House purposes, $49,815,009; specie hoard, $18,455,090, and the actual circulation outstanding $292,753,286. The specie hoard was mainly in the control of the banks of this city, in which there are over thirty millions of gold and silver. At the close of last week, the coin balance of the U. S. Sub-Treasury at this port was about 68 millions, which would give a currency balance of some 28 millions in order to make up the aggregate cash balance of 96 millions held by the office at the close of business on Saturday. Since the opening of the current week, the balances have been augmented by the transfer of public money to this point, so that the office now holds coin and currency to the amount of 98¼ millions, as against 95½ millions a week ago. Its coin interest disbursements, last week, were only to the amount of two millions, while the receipts of coin from customs at the port exceeded 2½ millions. The Government marketed a million of coin on the 22d inst., at from 135.20⅛@135.30.

The specie reserve of the city banks according to the latest return is $30,079,424, against $20,804,101 same time last year. The city bank deposits are now $193,622,260, against $226,761,622 week ending July 25, 1868. The legal tender reserve amounts to $54,271,862, against $72,235,586 same time last year. The circulation now stands at $34,110,798, against $33,963 373 same time last year. The loans are now $259,641,889, against $280,345 255 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $93,075,849 a day, against a daily average of $118,554,690 the preceding week, and $135,308,058 the week ending with July 10, 1869. The current week's exchanges average about $95,000 000 a day. The city banks, last week, reported a loss of $976,026 of specie, with an increase of $5,190,559 of deposits, and $2,412,156 of legal tender notes. They increased their loans, $2,633,600; and reduced their circulation, $67,639.

The city bank exchanges on Wednesday were $96,031,526, and the resulting balances, $2,933,182.

National Bank notes to the amount of $75,440 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $316,601,030, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $16,921,982, leaving, with the existing 1,626 banks, (having an aggregate capital of $422,659,260,) an actual circulation at this date, of $299,679,048. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,915,700; and for the public deposits, $22,214 500—making a total of $365,130,200. The Treasury Department last week redeemed and destroyed $290,200 of worn and mutilated fractional currency, and issued $198,270 of new. The outstanding amount of fractional currency on the 1st of July, was $32,062,528 against $33,452 523 on the 1st of June.

The U. S. Sub-Treasury receipts, week ending with July 24, were $22,379,100, including $2,580,597 from customs duties; payments, $17,036,398, including $2,010,924 of coin interest; balance at the close of the week, $96,079,045, against $90,786,343 at the close of the preceding week,

showing an increase of $5,342,702. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $2,512,896, including $341,000 from customs, and payments, $838,646, including $345,725 of coin interest. On Tuesday, receipts. $1,261,756, including $424,000 from customs, and payments $788,909, including $217,195 of coin interest. The balance at the close of business on Tuesday stood at $98,226,136, against $95,559,102 a week previous; and $94,320,598 on July 14, 1869.

The outstanding amount of coin certificates on the 1st of July was $30,489,640 against $23,540,720 on the 1st of June. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $874,000 and retired $2,348,596 through the receipts for customs.

Government revenues have been yielding more liberally, in the customs form, since our last. The excises have been rather less prolific. The excises, last week, yielded about 5½ millions; customs at the port of New York, $2,580,597, and at the outports about $860,000 (in coin) more, making the grand total income for the week equal to about $10,230 820 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1869, were $158,287,177. The customs yielded, same time, about 182 millions in gold. The miscellaneous revenues of the fiscal year yielded about thirty millions, making a grand total income for the year ending with June 30, 1869, of about 370 millions. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 21½ millions.

There has been a more active speculation in gold, since our last, and wider fluctuations have been noted in the price, the range having from 135⅛@137¾, and the closing figures on Wednesday 135⅞. The enlarged export drain has had the effect of stimulating the purchasing inquiry. The shipments last week exceeded three millions, thus far in the current week, they have been $201,600 on Tuesday. The customs demand has been likewise more active, the daily average having exceeded $400,000. The Gold Exchange Bank clearances were as high as 92 millions on Tuesday, and 103⅝ millions on Wednesday. Government, it is believed, will continue its gold sales through the month of August, on the same conditions as during the month now closing. The customs for the coming month will probably yield $17,500,000 in gold, and the prospect is that the Treasury Department will go out of July with a gold balance in the ownership of the Government of over sixty millions, and with no gold interest to pay, (except $4,800,000,) until November.

The following is the statement of the New York Gold Exchange Bank for the week ending Saturday, the 24th day of July, 1869:

Average am't of loans and discounts....	$1,468,313
Average amount of specie.....	1,069,768
Average amount of deposits.....	1,756,692

The customs of the port on Wednesday yielded $430,776. The U. S. Sub-Treasury disbursed $183,249 of coin interest, on that day.

The customs demand for Gold last week, averaged $430,099 a day; thus far, this week, it has averaged $382 500 a day, or equal to a weekly aggregate of $2,295,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $76,217, and since Jan. 1, $9,747,703, against $4,008,250 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $73,031,367, again $63,960,362 same time in 1868. At San Francisco, from Jan. 1, to July 15th, 1869, $4,085,421, against $4,385,731 same time last year.

The U. S. Treasury receipts from customs at all ports from July 1, to July 24, were about 13⅜ millions.

The exports of specie, from this port, last week, were $3,082,015, against $1,463,249 same week last year; total, since Jan. 1,1869, $21,294,741, against $58,972,565 same time last year. Government disbursed last week through the U. S. Sub Treasury here, on account of the coin interest on the public debt $2,010,924, and since Jan. 1, 1869. $61,741,051, against $59,193,367 same time in 1868. The specie exports from San Francisco, from Jan. 1, to July 16, 1869, were $22,439,532, against $21,780,419 same time in 1868.

Foreign exchange has been quoted brisker and firmer, but close tamely, and with symptoms of weakness. Some export purchases of U. S. Five-twenties have added to the supply of bills on the market. Bankers' prime sixty day bills on London closed less buoyantly on Wednesday at 109¾ @110⅛, and on Paris to 5.17½@5.12½; sight bills on London to 110¼@110⅝, and on Paris to 5.12½c.@5.10¾. The offering of produce bills has been again liberal this week.

There has been an active call for Government securities from home and foreign buyers, and a further improvement in prices has been reported, the market closing strong and buoyant, with a very limited offering of all issues available. The application of existing or expected surplus revenues to the reduction or sinking of the Public Debt, and the utilization of the heavy balances in gold and notes heretofore kept idle in the Treasury, as is now the policy of the Department, are generally interpreted as foreshadowing an early and decided, as well as most gratifying change in the value of the Public Funds, and in the financial situation of the Government. Washington advices intimate that Secretary Boutwell will continue his purchases of U. S. bonds, as well as his sales of gold, through the month of August, as through the closing month. These circumstances tend to strengthen the confidence of buyers in the National interest bearing obligations. The U. S. Assistant Treasurer bought in on Wednesday, $3,000,000 of Five-twenties, viz: $2,790,000 at 120.11 @120.23; and $210,000 at 120.11@120.19.

U. S. sixes of 1881 closed here on Wednesday at 121⅝@121⅞; U. S. Five-twenties of 1862, ex coupon, 123⅞@124⅛; U.S. Five twenties of 1864 at 122@122¼; U. S. Five-twenties of 1865 at 122⅛@122¼; U. S. Five-twenties of 1865, consolidated, 120⅝@120⅞; U. S. Five-twenties of 1867, 121@121¼; U. S. Five-twenties of 1868, 120⅞@121; U. S. Ten-forties at 112@112¼; U. S. Six per cent. currency bonds, 108⅝@108¾.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	July 14.	July 21.	July 28.
Consols.....	93¼	93⅛	93⅛
U.S. 5-20's of 1862...	81⅞	83⅛	....
Erie.....	18¾	19	18¾
Ill. Central.....	95¾	94⅛	93¾

A brisk railway and miscellaneous share business has been noted, during the week, at a substantial rise in prices, though there have been frequent, and rather marked fluctuations in values. The very latest dealings showed less buoyancy in the market.

General business has been fairly active in the line of Breadstuffs, Tobacco and Petroleum, but otherwise without animation. Middling upland cotton closed heavily on Wednesday at 34 cts. per lb. The stock of cotton now here is estimated at about 26,500 bales. The receipts at the port this week, have averaged about 850 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,298,500 bales, against 2,329,000 bales same time in 1867-'8; exports, same time 1,428,500 bales, against 1,661,000 bales same time in 1867-'8; stock on hand at latest dates. 49,250 bales, against 85,000 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 15.577 pkgs., against 14,089 pkgs., same time last year. From Boston, 5,930 pkgs., against 6,356 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in less demand, at from 9@16c., per lb.; week's receipts, 6,177. Milch cows, dull at from $40@$110 each, receipts. 56. Veal calves in slack request at from 5@10½c. per lb.; receipts, 3 996. Sheep and lambs more saleable at from 4@7¼c., and 8@11c. per lb.,; receipts, 23,507. Swine in less demand at from 9½@10⅛c. per lb.; receipts, 17,358.

Foreign goods have been less sought after, and less buoyant as to price. Freights have been less active and weaker. For Liverpool we quote flour at 2s. by sail, and 2s. 4½d.@2s. 6d. by steamer, per bbl.; grain at 7d. by sail, and 7½d. by steamer, per bushel; cotton at $\frac{5}{32}$@$\frac{3}{16}$d. by sail, and ¼d. by steamer, per lb.; and heavy goods 20s. @35s. by sail, and 25s.@40s. by steamer, per ton. Total number of vessels in port on Wednesday, 438.

The New York exports, exclusive of specie, for the week ending July 27, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week.....	$2,976,585	$4,544,557
Prev. reported.....	98,597,001	100,411,558
Since January 1.....	$96,573,586	$104,956,115

The imports for the week ending July 24, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods.....	$2,024,639	$2,187,841
Gen. merchandise.....	3,813,444	2,940,653
Total for the week.....	$5,838,083	$5,128,494
Previously reported....	133,640,285	173,463,145
Since January 1.....	$139,478,368	$178,591,639

The balance in the Sub-Treasury on Wednesday was $95,575,627 53.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Iron and Wooden Bridges, Turntables, etc.

Messrs. Hawkins, Herthel & Burrall, of Springfield, Mass., are doing some very good work in the way of Iron and Wooden Bridges and Turn Tables. They have just completed a fine Bridge, of 160 feet length, for the town of Pawtucket, R. I., and are now finishing up a Coal Wharf at New Haven, at a cost of $40,000, for the Hartford and New Haven Railroad Company.

As will be seen by their Advertisement in another column, their capacity for work is varied; and a long experience makes them worthy successors to the old and well known firms of Stone & Harris and Harris & Hawkins.

Macon and Augusta Railroad.

Mr. George H. Hazlehurst, one of the parties in whose hands the building of the Macon and Augusta Railroad has been placed, informs the Augusta *Sentinel* that work will commence on it within a few weeks' time. A large force of laborers has been secured and will be put to work at once on the whole of the unfinished portion of the railroad, which lies between Macon and Milledgeville. The work will be pushed forward as rapidly as possible, in order to secure a portion of the Jones county cotton crop.

☞ The *American Union* says the grading of the Queenstown and Harrington railroad has been commenced at "the stakes" on the eastern bank of the Choptank, about four miles above Denton. On the Harrington end about two miles have been graded. As soon as sufficient force can be secured work will be commenced along the whole line.

European and North American Railway.

This road has been completed to Lincoln, a distance of 50 miles from Bangor, to which point it was opened on the 22d inst. This portion may be regarded as the first great section of the road which is to connect Bangor with Halifax and the eastern continent. Fifty miles are thus accomplished, and another fifty are already under good headway, leading to the border, at which point that portion of the road which lies in New Brunswick will be completed and ready to pass the trains on their first arrival there. The road as completed, passes through the villages of Veazie, Orono, Great Works, Oldtown, Milford, Olemmon, Passadumkeag, and Lincoln. The amount of business and travel thus far has exceeded expectation, and gives encouragement of a successful enterprise.

Port Huron and Lake Michigan Railroad.

The work of laying the iron on this road has been commenced at the Port Huron end. It is expected that the track will be completed to Lapeer, a distance of forty miles, by the first day of October, and to Flint by the 1st of January, 1870. From the latter place the road runs through Shiawassee County on what is known as the Southern Line, passing about fourteen miles southeast of Owosso, through the towns of Vernon, Bennington, Antrim, Shiawassee and Woodhull. The road will ultimately be continued to Lansing and thence to Battle Creek, there connecting with the Peninsula Railway, and making other connections to Chicago.

Little Rock and Fort Smith Railroad.

The Fort Smith *Herald* learns from Col. DuVal and Mr. J. S. Bostick, that it is the intention of the directors of this company to send a committee to Fort Smith in a few days for the purpose of locating the depot, and arrangements would be made to commence grading the road between Fort Smith and Van Buren, and that the rails would be put down and a car placed on it, and work would also be commenced on the bridge across the river. It is now confidently asserted that the road will be put in running order in fifteen months. Boston capitalists have taken hold of the matter and are willing to advance five or six million of dollars to complete the work.

☞ The Centerville (Md.) *Observer* of July 20th says the iron for the track on the Queen Anne's and Kent railroad reached Massey's a few days ago, and track-laying immediately proceeded. It was confidently expected that the trains would reach Millington yesterday, and Sudlerville in a short time. Our people are zealous in this matter, and determined to have a railroad at any cost.

☞ At the hearing at Vergennes, the 23d inst., Chancellor Pierpont, on motion of the counsel for the first mortgage bondholders, dismissed with costs the petition of the Rutland Railroad Company for the transfer to them of the possession of the Railroad and property of the Rutland and Burlington Railroad Company.

☞ The contractors have completed their work upon the first four miles of the Colebrookdale Railroad from Pottstown east, including the bridge across the Manatawny. The whole road, 14½ miles in length, from Pottstown to Mount Pleasant in Washington township, will be open for travel about the first of September next.

Journal of Railroad Law.

RAILROAD COMPANY—LIABILITY OF ENGINEER FOR FAILURE TO RING THE BELL AT A CROSSING—DUTY OF ENGINEERS AS TO VIGILANCE IN GUARDING AGAINST ACCIDENTS TO THE YOUNG, AGED AND INFIRM—$1500 NOT EXCESSIVE DAMAGES FOR KILLING A BOY.

The facts of the recent case of O'Mara *vs.* The Hudson River Railroad Company (38 N. Y., 445,) are fully and clearly stated in the following opinion by

HUNT, CH. J.—The only questions to be here considered arise upon the motion for a non-suit made at the close of the plaintiff's evidence. No question of law was presented to the Court at any other point of the trial than at the making of that motion.

The points there presented were, first, that there was no negligence on the part of the defendant, and second, that the negligence of the plaintiff contributed to the result.

On the first point, of the defendant's negligence, the evidence tended to show that the bell was not rung or the whistle blown, as required by the statute. Two witnesses testified, that they were present at the occurrence of the accident, and hat they did not recollect that the bell was rung or the whistle blown; and no evidence whatever was given to the contrary, when the motion was made. It did appear that the bell was rung as a signal to the switch tender, but it did not appear that it was continued until the crossing was reached. (Laws 1854, § 7.) This Court has repeatedly held, that the absence of this statutory signal was evidence of negligence, which would permit the jury to hold the railroad company responsible.

Again, the "Jones" was run by a fireman only, the engineer not being on board. Is it performance of that degree of care and attention which the law exacts of a railroad company, that it should entrust its engines to the custody of a subordinate when crossing public thoroughfares? I suppose the jury may be assumed to know, and may be permitted to act upon the knowledge possessed by every intelligent man, first, that a fireman is not expected to possess the skill and knowledge in the management of a locomotive engine that is required of an engineer; and, second, that the manager of an engine can see upon one side only of his machine for a short distance ahead of him. This latter fact appears in almost every case before us, and is expressly proved by the fireman on his examination, in a subsequent stage of the present case. If the "Jones" had been under the charge of an engineer who understood its management, who knew his duties in giving warning of his approach, and had been, also, provided with an attendant fireman, can any one say that this calamity might not have been avoided?

Upon each of two grounds mentioned, to wit, the absence of the bell or whistle, and the running of the "Jones" by a fireman alone, without an engineer, I am of the opinion that the jury were justified in finding a want of proper care on the part of the defendants, and that the motion for a non suit was properly denied.

Was there negligence of the deceased, which caused or contributed to his death? In our own Courts, as well as in the recent English cases, the apparent negligence of the party injured was greater than in the present case. (Beebee *vs.* The London B. & S. C. R. W. Co., 18 Com. B. [N. S.,] p. 18, and others.) The Court, however, held in these cases, that the question must be left to the jury, and in each case sustained their finding, that there was no contributing negligence on the part of the person injured. In the present case, it is to be considered, also, that the deceased was a lad, eleven and a half years old, to whom greater indulgence should be extended than to an adult. He was of that age, that he was quite fit to be trusted with the care of his own person in the streets of a country village, and yet it is not probable that he would exercise as much prudence and caution as would an adult. If an aged or infirm person had been found upon the crossing of this street, when the "Jones" was started westerly, in such a position that he could have been seen by the engineer or fireman, it would have been the engineer's duty to have stayed the engine, so that the disabled person could make his escape. It would have been his duty, if practicable, to have ascertained that he was thus disabled, and to have allowed more time for his passage than would have been allowed to one less unfortunate. The old, the lame and the infirm are entitled to the use of the streets, and more care must be exercised toward them by engineers than to those who have better powers of motion. The young are entitled to the same rights, and cannot be required to exercise as great foresight and vigilance as those of maturer years. More care toward them is required than toward others. In the case of a child but two or three years of age, no knowledge or foresight could be expected. This an engineer is bound to know, and if the child is within his view, to act accordingly. In a case like the present, that a boy of eleven and a half years of age, the jury were not bound to require the same demureness and caution as in the case of an older person.

The general questions of the negligence of the defendants and the contributory negligence of the plaintiff, have been so frequently and recently before this Court, that it is not necessary to discuss the cases. They concur in principle with the English authorities cited. I refer to some of them: Brown *vs.* N. Y. Central R. R., (34 N. Y., 404); Ernst *vs.* The Hudson R. R. R. Co., (35 id.) and others.

The defendants insist that there was no proof of the pecuniary value of the boy's life, and that non-suital damages only should have been given. The boy was engaged in actual service when he met his death, to wit., upon an errand with a pail for his mother, and to procure beer for his father.

I am quite clear, however, both upon principle and upon authority, that a jury would have the right, acting upon their knowledge and without proof, to say, that the services of a boy from eleven to twenty-one years of age, were valuable to his father, and to estimate their value. (Mc Mahon *vs.* The Mayor, 33 N. Y.; Drew *vs.* The Sixth Av. R. R. Co,, 26 id., 44, and others.)

The judgment should be affirmed with costs.

Judgment affirmed.

☞ It is said that the extension of the Concord and Claremont Railroad from Newport to the Connnecticut River will be put under contract within a month.

Cincinnati and Baltimore Railroad.

The Cincinnati and Baltimore Railway Company was chartered by the Ohio Legislature for the purpose of operating a railroad with one or more tracks between Cincinnati and Loveland.

The company is now constructing the seven miles at this end of the grand route to Baltimore, extending from the junction of the Marietta and Cincinnati with the Hamilton and Dayton road road above Spring Grove, and running on the east side of Mill creek. One-fourth of the right of way has been donated, and a large portion of the remaining distance has been purchased. In consequence of the deep fill on Mill Creek bottom, those seven miles are estimated to cost $750,000. The contract provides for its completion by the end of 1870. To provide resources for this work the share capital has been put at $500,000, and an issue of bonds for a like amount is to be secured by a mortgage or deed of trust.

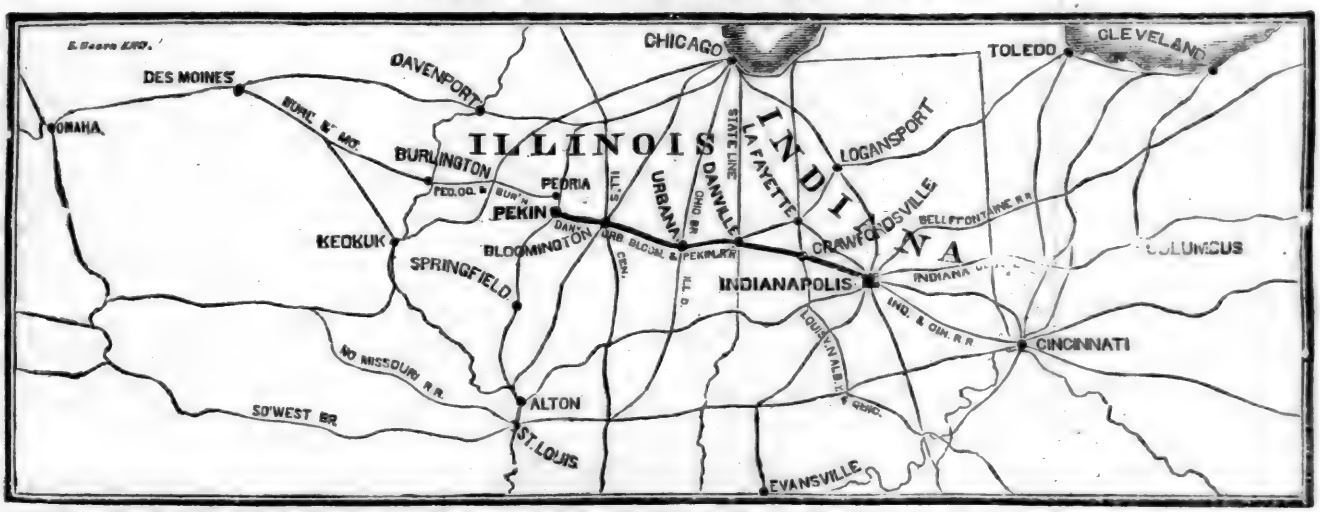
The Marietta and Cincinnati and Baltimore and Ohio Companies have subscribed so liberally that but $150,000 of the share capital is left for individuals, of which a portion has already been taken by individuals. One of the greatest roads of the whole country will be this direct line to Baltimore. It is our most direct route to the seaboard, and it must draw immensely upon the trade of the West and South. The seven miles now being constructed will afford the most eligible route for other roads to connect with the city. All the inlets to Cincinnati are now occupied. Several roads occupy the western, the Hamilton and Dayton the inlet on the west side of Mill creek, and the Little Miami fills up the way into the east end of the city.

No other inlet remained, except that on the east side of Mill Creek, which the Cincinnati and Baltimore Company has now secured. Roads that may be hereafter built must lease the use of some track now laid, or this one that is being built. The latter one will be the most desirable track for new roads and in this regard its value is greatly enhanced.

The Marietta and Cincinnati Company has real estate to more than the value on $250,000, which will be sold, if neccessary, for the construction of this remaining seven miles of the route. As to the Baltimore and Ohio Company, no one doubts its ability to discharge all its obligations.

Backed by two powerful companies, one of which is bound to keep the track in perpetual repair, and having peculiar advantages of its own as a line for other roads to lease, stock in the Cincinnati and Baltimore Company can but be, as we have said before, among the most desirable for permanent investment.—*Cin. Times.*

☞ The Boston *Journal* says that a new road from New York to Boston has been projected. It is to start from the east side of Harlem river and connect with the Hartford and Erie road at Brewster, after running through the best portions of Westchester and Putnam counties. The capital stock is fixed at one million of dollars. Gentlemen of influence and wealth, are said to be interested in the enterprise, including A. K. P. Joy, Andrew McKinry, L. A. Bigelow, and Gen. Adams of Massachusetts.



☞ About the first of August a through train will run from Keokuk to New York, over the line of the Toledo, Peoria and Warsaw and connecting roads. The contract for building the road west from Keokuk to connect with the Union Pacific at Omaha has been let, and one hundred miles are to be completed this year.

☞ Since the New Haven and Northampton Company have taken possession of their road, they have placed upon it eight new locomotives, twelve elegant passenger cars, and one hundred and ninety freight and coal cars. Their new wharf has a double track and their new freight depot is nearly finished.

SEVEN PER CENT. GOLD
FIRST MORTGAGE CONVERTIBLE BONDS
OF THE
Danville, Urbana, Bloomington and Pekin Railroad Company
OF ILLINOIS,

Principal and Interest payable in Gold at the Farmers' Loan and Trust Coupany, New York. Coupons payable April and October.

FREE OF GOVERNMENT TAX.

The Danville, Urbana, Bloomington and Pekin Railroad, upon which property these bonds are issued, is now in process of construction, its termini being the cities of Danville and Pekin, both in Illinois. The length of the road is 117 5-100 miles; its capital stock $3,060,000. The grading, bridging, and all the work necessary to perfect a complete roadway has been already done, and the whole line is ready for the rails. These are rapidly being put down, and a portion of the road is now in successful operation. It is expected that the whole road will be completed early the coming autumn.

These bonds are convertible into stock at par, at the option of the holder, and may be registered in the name of the owner, at any time if desired. The total amount of bonds is limited to $2,000,000. The security offered is, as we shall show, the very best. Already sums, nearly equal to the total amount of bonds to be issued, have been expended on the road. The bonds, averaging less than $18,000 per mile, are secured by a first mortgage on the whole road, and entire property of the company. The road runs East and West on the line of the principal and oldest emigrant-road in the State, passing through several populous towns and cities, and the richest agricultural district in Illinois—in a word, through the garden of the Garden State. Its local business alone will suffice to make it a first-class paying road; while, with its connections with many principal lines, its through trade must be such as to make it one of the most profitable in the country.

The road will be consolidated with the line from Danville to Indianapolis, making a line of 210 miles. At Indianapolis, connection will be made with all the through lines to New York and Baltimore; at Danville with the Toledo, Wabash and Western. In fact the road will form a main link in the direct communication of the principal Atlantic cities with southern Illinois, with Keokuk and Burlington, Iowa, and thence with Omaha and the Pacific.

It will complete a direct line from Boston to Peoria, Keokuk, Burlington, Omaha and the far West, via Albany, Buffalo, Cleveland, and the Bellefontaine Railroad to Indianapolis and Danville, or via Toledo and Wabash and Western Road.

It will form the most direct line from New York to the same points West via the New York Central, Lake Shore and Bellefontaine Roads, to Indianapolis and Danville; or via the Erie, Atlantic and Great Western, to Dayton, Ohio; and via Indiana Central, to Indianapolis, Danville, Bloomington, &c.; as well as from Philadelphia, via the Penn. Central to Harrisburg, Pittsburg, Columbus, Dayton and Indianapolis.

It will form an important link in the communication of Baltimore and the South with the Great West, the North West and the Pacific, via Baltimore and Ohio Railroad, to Parkersburgh, Cincinnati, Indianapolis, Danville and Peoria.

Thus with the combined advantages of a certainty of a remunerative local business and a through business, which, as a connecting link to so many diverging and principal lines, it must necessarily have, it is reasonable to presume that the earnings of this road must exceed, in proportion to its length, those of any other railroad in Illinois. The following table shows the earnings of some of the principal railroads in Illinois:

Railroads.	Gross Earnings.	Miles road.	Earnings per mile.
Chicago, Alton and St. Louis	$3,892,861	280	$13,900
Chicago and Northwestern	11,712,248	1,152	11,670
Chicago, Rock Island and Pacific	4,105,103	410	10,012
Toledo, Wabash and Western	3,783,820	521	7,261
Illinois Central	7,160,991	708	10,115

It is safe to estimate the receips of the Danville, Urbana, Bloomington and Pekin R. R. for the first year, at $12,000 per mile, or on 117.05 miles, $1,404,600.

FIRST YEAR.

Receipts, as estimated		$1,404,600
Estimated expenses as follows:		
Operating expenses, 50 per cent	$702,300	
Interest on $2,000,000 gold bonds, 7 per ct.	140,000	
Premium, 40 per cent. on $140,000 gold	56,000	
Set aside as Sinking Fund	10,000	
		908,300
Leaving a net profit over interest and expenses		$496,300

or over 6 per cent. for dividends on the capital stock the first year of its operation. Without doubt, a progressive increase thereafter, each year, would be the result. The geographical location of the road is alone sufficient to convince all of its great value and usefulness.

The stock of the Rock Island and the Illinois Central, the Chicago and Alton, Burlington and Quincy Roads, are all selling at from above par to nearly 200, while none of them are more favorably located, and the competition of them all is much greater than this can have. There is no reason why the stock of this road shall not sell as high as either of the above. Hence the privilege of converting these bonds into stock of this Company at par at any time desired greatly increases their value.

After having personally and thoroughly examined this road, we accepted the agency for negotiating its bonds. We now offer them at 95 and accrued interest in currency. With the utmost confidence we recommend them as a reliable and safe security and profitable investment.

At the present price they pay 10 per cent. currency,—over 45 per cent. more than the same amount invested in Five-twenty Bonds,—besides the advantage of being free from tax, and the prospect of a speedy advance in the stock of the road on completion, into which they may be converted.

Government Bonds and Gold received at their market value in exchange without commission. Bonds forwarded by Express free of charge.

Full particulars furnished by the undersigned, Financial Agents of the Company.

TURNER BROTHERS, Bankers,
14 Nassau Street, New York.

New York, July 22. 1869.

☞ At a recent meeting of the corporators of the Montpelier, St. Johnsbury and Lamoille Valley Railroad Company held at St. Johnsbury, Vt., it was decided to proceed with the work immediately.

Des Moines Valley Railroad.

The iron on the Valley Road is now laid four miles west of Ferry, or within twelve miles of the Northwestern Road. These twelve miles are all graded and nearly ready for the iron, and Colonel Smith assures us that the locomotive will reach the Northwestern the latter part of this month. Beyond the Northwestern, much of the grading is done to Fort Dodge. The distance is thirty-three miles. Track-laying will begin on that section as soon as Grand Junction is reached, and will go forward as fast as the workmen can hurry it ahead, the graders being so far in advance that they can keep out of the way. Fort Dodge will be reached in October.—*Des Moines Register.*

North and South Alabama Railroad.

We understand that the necessary iron for the construction of the North and South Alabama road, from Montgomery to Decatur, has been secured, and that 10,000 tons will be transported by rail from Mobile to Limekiln at an early day. One hundred and twenty miles of the road are now under contract. The agreement for the consolidation of the road from Jacksonville to Gadsden with that from Gadsden to Guntersville has been consummated, and Mr. John Everett, of London, has left for New York to make financial arrangements for its immediate construction. The Gadsden *Times* says that it is expected to have the road completed to Guntersville in about fifteen months.—*Nashville Banner*, July 24.

Cairo and Fulton Railroad.

The needful funds have been raised in England to build the 300 miles of the Cairo and Fulton road lying within the State of Arkansas, and the whole line will be put under contract the present season. Col. Allen will extend it from the Arkansas line to Charleston, thus opening up connection between Little Rock, Fulton and St. Louis. For $100,000 Cairo bonds, the road will be extended on a direct line from Charleston to Bird's Point, thus finishing it as originally contemplated.—*Cairo Bulletin.*

☞ The rails have been laid upon seven miles of the Metropolitan Branch of the Baltimore and Ohio Railroad from Washington westward. This branch will reduce the distance between the West and Washington forty-nine miles. The work is rapidly progressing, and the road will be opened to the intersection of the turnpike at Silver Spring in a brief period. Work upon many of the heaviest sections between Silver Spring and the Point of Rocks is also progressing.

☞ The survey of the Addison County (Vermont) Railroad has been completed. The line as surveyed is a little more than 15½ miles in length. It will begin at the West Salisbury station and run through Cornwall to Lemon Fair, which is bridged and thence through Bridport to the lake.

☞ J. C. Prescott & Co., have taken the contract for grading 65 miles of the Decatur and East St. Louis Railroad. Their office is in Litchfield, Montgomery county, Ills.

☞ John Pitcairn has been appointed General Manager of the Oil Creek and Allegheny River Railway, with headquarters at Corry. C. J. Hepburn is Superintendent.

☞ W. B. Phelps has been appointed General Superintendent of the Syracuse, Binghamton and New York Railroad.

☞ It is stated that the Junction and Breakwater Railroad will be open for travel to Lewes about the middle of next month.

☞ Mr. R. D. Jennings has been elected Secretary and Treasurer of the Milwaukee and St. Paul Railway Company, *Vice* A. Cary, deceased.

Memphis and Little Rock Railroad.

The Memphis *Appeal* says that the work upon the line of this road is now progressing more rapidly than at any time since the first inception of the enterprise. The rails have been laid as far west as Forest City "Cut," four miles beyond the St. Francis. The grading is finished, and the timbers and ties delivered upon the ground sufficient to lay the track to L'Anguille river, six miles west of Forest City. In all respects matters are moving along much more satisfactorily than heretofore, and in a manner reflecting no little credit upon the energetic contractors, as also upon Mr. President Brinckley and his associates in the board of directors. Col. D. B. Williams has been appointed Superintendent of the road *Vice* Mr Beaumont, resigned.

A SEVEN PER CENT. GOLD LOAN.

$6,500,000.

The Kansas Pacific Railway now in successful operation from Kansas City to Sheridan, proposes to build an extension to Denver, Colorado. The Government has granted Three Millions of Acres of the finest lands in Kansas and Colorado, which are mortgaged for the security of a loan of

$6,500,000.

This loan is secured in the most effectual manner. It represents a road in profitable operation, and will open the trade of the Rocky Mountain country and connect it with the great markets of the East. It is considered to be one of the best loans in the market.

EVEN BETTER IN SOME RESPECTS THAN GOVERNMENT SECURITIES.

The loan has thirty years to run, principal and interest payable in gold, semi-annually in either Frankfort, London, or New York, and will be free from Government taxation. The bonds for the present are sold in currency at 96, with accrued interest.

Circulars, maps, and pamphlets sent on application.

Notice to Contractors.

THE PARKTON AND MANCHESTER RAILROAD COMPANY will receive PROPOSALS up to the 14th of August for the GRADING and MASONRY and BRIDGING, in mile sections or the entire Road 13¾ miles long.

Address, marked "Proposals."

L. C. MORLEY, Secretary.
Manchester, Carroll County, Md.

Proposals for Bridging!

SEALED PROPOSALS WILL BE RECEIVED AT this Office until 12 M., Saturday, August 7, 1869, for the bridging and timber work on the line of the Tebo and Neosho Railroad between Sedalia and Clinton.

Bids on bridging will be per lineal foot. Bids on timber work, such as open culverts, road crossings, and cattle guards, will be per 1,000 feet B. M., in place.

Plans and specifications can be seen at this office. Bidders at a distance can obtain the same by correspondence.

Proposals for the entire line will also be considered. The right to reject any and all bids is hereby reserved. Bids should be endorsed "Chief Engineer, Tebo and Neosho Railroad. Proposals for bridging."

TO RAILROAD CONTRACTORS.

Memphis, El Paso and Pacific RAILROAD COMPANY.

Office of the Chief Engineer,
Memphis, El Paso and Pacific Railroad Company,
66 Exchange Place,
NEW YORK, June 8th, 1869.

SEALED PROPOSALS will be received at the above Office, until **September 1st, 1869,** when Contracts will be awarded, for the GRUBBING and CLEARING, GRADING, MASONRY, BRIDGING, BALLASTING, CROSS TIES and TRACKLAYING of the following portions of said Railroad:

FIRST—The last Fifteen miles on the First Division of One Hundred and Fifty Miles, between Jefferson and Paris, Texas, commencing Eight miles east and extending Seven miles west of the town of Clarksville, in Red River County.

SECOND—One Hundred and Fifty miles, embracing the Second Division, commencing at Paris and extending westward, to Palo Pinto County.

Specifications, Profiles, Maps and Plans can be examined after the FIFTEENTH OF AUGUST, 1869, at the ENGINEER'S OFFICE, in NEW YORK or JEFFERSON.

Proposals must conform to the specification which will be furnished upon application at either of the above places after August 1st, 1869.

Evidence of ability to complete contracts will be required and a percentage retained of estimates until each section of five miles is finished.

Work upon the First Division must be completed by March 1st, 1870.

The Second Division must be finished by October 1st, 1870.

Every facility will be furnished those wishing to inspect the ground on the line of the road, by application in person at the Engineer's Office in Jefferson.

J. M. DANIEL, Engineer in Chief,
Memphis, El Paso and Pacific R. R. Comp'y.

Notice to Contractors.

SEALED PROPOSALS, addressed to the undersigned, will be received until August 6th, 1869, for the GRADUATION, MASONRY and BALLASTING of the BUTLER BRANCH of the WESTERN PENNSYLVANIA RAILROAD, from Freeport, Armstrong County, 21 miles, to Butler, Butler County, Pennsylvania. Profile and specifications can be seen at the Engineer's Office, Freeport, Armstrong County, Pennsylvania, on and after July 26.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

The Tehuantepec Railway.*

The object of this work is to demonstrate clearly to the satisfaction of the reader the almost incalculable advantages which will accrue by the establishment of the proposed inter-oceanic route, *via* the Tehuantepec Isthmus in a geographical, military, and commercial point of view, to the civilized nations of the earth, but more especially to the United States. The establishment of a commercial junction between the seas was first conceived by that bold and far seeing navigator, as well as adventurer, Hernando Cortez, the conqueror of Mexico, as early as the year 1519, and we are favored in this work with the history of the failures, mismanagement and trials which the enterprise has encountered down to the present time, when through the energy and perseverance of Hon. Marshall O. Roberts, the principal promoter of the enterprise, and Simon Stevens, Don Emilio La Sere procured from the Republic of Mexico on the 6th of Oct. 1867, a grant which was amended by the Congress of that Republic on the 2d day of January, 1869, which gives them the exclusive privilege to open communication across the Isthmus by railroad, carriage road and telegraph line.

A brief review of the history of the enterprise may not be uninteresting. Leaving Cortez, whose explorations demonstrated to him that the twin continents were inseparably united, and who at the same time conceived the idea of a lucrative speculation by means of a carriage road over the Isthmus to supply Spain with spices and other products which he expected to discover in the new regions, and the subsequent expeditions of Diego de Ordaz and Luis Marin, we find that when death claimed these adventurous brave men the project was suffered to remain dormant for upwards of two hundred years: but near the close of the seventeenth century, Dampier made an exploration of the Goatzacoalcos and constructed a chart of the bar, and found in the shallowest part twelve feet of water, and the river navigable for large vessels to Minatitlan a distance of twenty one miles.

In the year 1745 the idea of opening the Tehuantepec route was again revived by some of the intelligent residents of Oaxaca who in a memorial to the viceroy of Mexico set forth the immense advantages that would arise to the Kingdom by making Goatzacoalcos a port of entry, but the merchants located at Vera Cruz and Acapulco had no sooner been apprised of the intention of their neighbors at Oaxaca than they adopted means to prevent the success of the appeal, and in a lengthy document set forth the commercial calamities that would ensue in other parts of Mexico if the project was allowed to be carried out, and the result was that the court of Spain issued an order denouncing the projectors as "Audacious innovators of the established regulations and commerce of the Kingdom and prohibiting them ever again reviving the subject under pain of the royal displeasure."

As early as the year 1820 the name of an American became associated with the project, who showed in a series of articles the feasibility of the plan. This gentleman was William Davis Robinson, an engineer of much ability. Again, in 1824, a commission was appointed jointly by the State of Vera Cruz and the Federal Government to survey the Isthmus, but on account of intestine feuds existing in Mexico the survey was prevented for a number of years, and it was not until 1842 that, upon the representation of Don Jose de Garay, the Government of Santa Anna conferred upon him an exclusive grant with liberal provisions to construct and operate a line of railroads in connection with river navigation to be operated by steam power from ocean to ocean across the Isthmus of Tehuantepec. So important and valuable was this transit considered by the American Government that it was made a subject for State correspondence between Mr. Buchanan, then Secretary of State, and our commissioner to Mexico, Mr. Trist. Although the Government of Mexico refused at that time to listen to the proposal put forward by our government, yet they subsequently annulled the grant given to Don Jose de Garay. And since that time under the several governments of Mexico no less than three other grants have been given and annulled. "The grant to La Sere is now the only one in existence, and is owned by the Tehuantepec Railway Company, which has settled all outstanding claims relative to this Isthmian transit, whether in law or equity and now enjoys its title in peace."

It is evident that great advantages must result to this country and Mexico by the establishment of a rapid and safe inter-oceanic communication across the Isthmus of Tehuantepec, "the gateway between the Gulf and Pacific Ocean."

But let us glance now at the geographical position of the Isthmus which lies within the territorial limits of the eastern sections of the States of Oaxaca and Vera Cruz. It will be seen that it is the narrowest portion of the Mexican Republic that is washed by the two great seas, and is comprehended between the parallels of latitude 16°6′ and 18° 10′ north. Although the coast line on the Mexican Gulf trends almost due east and west for a considerable distance, the boundaries of the Isthmus proper are marked on the east by the entrance to the Laguna of Santa Anna, and on the west by the noble and majestic peaks of Pelon and San Martin. On the Pacific side, which is the portion within the intendency of Oaxaca, the department of Tehuantepec stretches eastwardly to

* *The Tehuantepec Railway, its location, features and advantages under the La Sere Grants of* 1869. D. APPLETON & CO., New York. 8 vo. pp. 200.

the limits of Tlacolula. These somewhat irregular boundaries comprise an area of very nearly 10,350 square miles, being somewhat larger in extent of territory than the State of Vermont.

The Tehuantepec route is not only shorter in distance, but healthier than the present one across the Isthmus of Panama. The President of the company, Simon Stevens, in the introductory portion of the work, thus refers to the advantages possessed by the Tehuantepec route over that of Panama and Aspinwall:

"At the present day, lines of steamships, American, English, and French, in connection with a railway across the Isthmus of Panama, are maintained and made immensely profitable by the commerce which unites the wealthy and increasing population of the Pacific coast of North and South America with the United States and with Europe. Yet the commerce thus carried on is forced to make a long and circuitous journey, involving unnecessary expenditure both of time and money, and yearly exposing thousands of passengers of all nations to the unwholesome influences of the climate of the Isthmus of Panama.

"No one therefore can doubt that a line of communication across the Isthmus of Tehuantepec, passing through a region, the superior healthiness of which has been attested by repeated surveys, and shortening the distance about 1,500 miles, and the time of transit between New York and San Francisco no less than six or seven days, must speedily draw to itself the greater portion of the great interoceanic trade, and become, in fact, the highway from Europe and Atlantic America to the States of the Pacific, to South America, to the Islands of the Southern Sea, and the older continents of Asia and of Africa."

By the terms of the charter the company agree to make the necessary and proper surveys within eighteen months from the date of the grant, and commence the construction of the railroad and telegraph line within six months after the completion of the survey. The carriage road, it is stipulated, shall be commenced at the same time as the railroad, and shall be completed to the satisfaction of the Government within one year and a half. Of the unclaimed lands that may exist, the Government gives to the company the strip that it may require for the line of the roads, and besides this, the half of the unclaimed lands, which may be found within a lateral league, on each side of the railroad only, through the whole length of its line. Lands and material are ceded to the company for the construction of wharves and the erection of suitable buildings. Light houses are to be built at the expense of the company, but are to belong, and be subject to, the control of the Government. The right is conceded to the company to collect postages, and transit fees, wharfage, storage, and any other fees for freight on merchandise, transportation of passengers, and transmission of telegrams; but the tariff which the company may establish for the sum total of all its fees, wharfage alone excepted, will not exceed fifty cents per league for each passenger, three cents per league for each arroba (25 lbs.) of merchandise, and one per cent. on the value of precious metals and jewels, this assignment being understood to be for the whole transit of the route by land and water, and ten cents for each word of the telegrams.

The company agrees to carry the mails free, and Government property at half rates. The capital of the company is $18,000,000.

ESTIMATED COST OF THE ROAD.

Wagon road from Minatitlan *via* Jaltepec crossing at Hargousana to Ventosa, complete, 208 miles	$160,000
Passenger and freight house at Hargousana or Jaltepec crossing, including machine shop, fixtures and machinery for the whole road	120,000
Passenger and freight houses and light repair shops at Ventosa and Minatitlan	120,000
Wood and water stations	18,000
Clearing, grading, bridging, and preparation of road bed complete from Minatitlan to Ventosa, 162 miles	5,948,000
For one mile of superstructure (iron imported free of duty)	8,500
172 miles of track including 10 miles of turnouts complete	1,462,000

EQUIPMENT.

8 freight engines, 30 tons each	$14,000	$112,000
6 passen. engines, 20 tons each	12 000	72,000
14 passenger cars	4,000	56,000
10 passenger and baggage, 2d class	3,500	35,000
120 freight cars, open and box	900	108,000
85 repair cars of all kinds		12,000

This equipment, according to Col. Julius W. Adams, the Engineer, will suffice to open the road with a capacity for 100,000 passengers, and 100,000 tons of freight yearly.

Recapitulation of cost of opening passenger and freight traffic from the Gulf of Mexico to the Pacific Ocean.

Auxiliary wagon road Minatitlan to Ventosa	$160,000
Railroad fixtures at Jaltepec, Ventosa, Minatitlan and line of railroad	258,000
Grading, bridging, and preparation of road bed, Minatitlan to Ventosa, 162 miles	5,948,000
Superstructure, 172 miles	1,462,000
Engineering and superintendence	600,000
Equipments	395,000
Total estimated in U. S. currency	$8,823,000

Part second is comprised of Historical and Geographical notes from 1453 to 1869.—By Henry Stevens, G. M. B. F. S. A., etc. Besides this we are favored with well written articles on the "Topography of the Isthmus, its inhabitants, climate, harbors, geology and mineralogy, timber and vegetable productions, animals, the several towns, productive industry, sources of revenue, etc." On the whole the work will repay perusal. It is amply illustrated by maps and drawings. The charter is printed in both Spanish and English. The typography is also of great beauty, and well worthy the house of Baker & Godwin.

The Locomotive Business.

The Paterson Locomotive Works have not been busier than they are now since the war, although their profits are very small compared with what they once were. All three establishments are driving ahead with full complements of workmen, employing somewhere near two thousand in all. The number of locomotives turned out is simply enormous. Four engines have been sent of by the Rogers Works alone in the last two days; to-day two were sent off—one from the Danforth Works for the Rockport, Rock Island and St. Louis Railroad, and another from the Grant Works for the Chicago, Rock Island and Pacific Railroad. Six engines in three days is big work. During the first six months of this year the Grant Works turned out fifty-two engines, and the other two establishments built about one hundred and ten, so that Paterson is now turning out engines at the rate of three hundred and twenty a year, or more than one a day for every working day in the year. That this figure will be reached this year is morally certain.—*Paterson (N. J.) Press.*

Virginia State Debt.

The following directions in relation to the payment of the interest on the debt of Virginia has been issued by United States Paymaster Stanton, now acting Auditor of Public Accounts in Virginia:

RICHMOND, Va, July 31st, 1869.

Brevet Major S. A. Porter, United States Army, Second Auditor of Virginia:—

SIR—The General Commanding directs the payment of one per cent. of the semi-annual interest due January 1, 1869, on the public debt of the State of Virginia, and prescribes the following rules to govern the payment thereof:—One-half of the interest due January 1, 1869, on the coupon and registered debt of the State of Virginia, exclusive of the funded debt, under the provisions of the acts of the General Assembly of March 21, and April 23, 1867, will be paid upon proper application at the office of the Second Auditor on and after August 10, 1869. In the case of registered stock this amount, which is one per cent. on the principal, will be paid by warrant on the State Treasurer, and the balance placed to the credit of the holder of the stock certificate in the usual form, certificates being given thereof when desired. For the payment of coupons bearing date Janaary 1, 1869, a warrant will be given for payment of one-third of the face value and for the issue of two new coupons for each one surrendered, one to be in usual form for the one per cent, for which payment is not provided by law, and the other to be a red coupon, showing on its face that it issued for balance of the interest due January 1, 1869. The semi-annual dividends due January 1, 1869, on the stock of the old James River Company, in the hands of private individuals, will be included in the above payments, but will not include any arrearages of interest thereon. The necessary funds to carry out these instructions will be furnished you upon application to this office.

T. H. STANTON,
U. S. Army, Auditor of Public Accounts.

Louisiana and Missouri R. R.

The Louisiana and Missouri Railroad, now being built, starts from the town of Louisiana, Pike County, Missouri, on the Mississippi River, as its Eastern terminus, intersects the North Missouri Road at Mexico, Audrian County; passing through Boone County, crosses the Missouri River at Glasgow, Howard County, and thence continues westwardly through Saline, Lafayette, and Jackson Counties to Kansas City, its Western terminus. The main line to Mexico, and the branch to Jefferson City, 100 miles in all, are under contract, and the work is in progress, to be completed in May, 1870; while surveys are making of the balance of the line to Kansas City, with a view to putting the whole under contract by the 1st of August. The distance to be traversed by the line of rail between this place and Louisiana will be about 200 miles. The authorized capital of the Company is $10,000,000. The stock of the Company has been subscribed for by the counties along the line (including individual and municipal subscriptions) to the amount of about $2,750,000, (11,000 a mile), as follows: Pike, $300,000; Audrian, $275,-

000 ($75,000 to the Jefferson City Branch); Boone, $50,000; Howard, $400,000; Saline, $500,000; Lafayette, $500,000; Jackson, $250,000; Calloway, $500,000; Jefferson City, $250,000.—*Kansas City Journal, July* 23.

The Income Tax.

HOW IT EFFECTS CORPORATE SOCIETIES.

The Commissioner of Internal Revenue has decided that the Shaker community at New Lebanon, Montgomery County, Ohio, is such a "person" as is required to pay a tax upon annual gains, profits and incomes, and that it is entitled to only one exemption of $1,000. This, so far as the exemption is concerned, is a reversal of the previous ruling of the office, under which there was allowed an exemption of each and every covenanting male member of the society; and so far as the rest is concerned, it is a reversal of the ruling that the word "person," as used in section 116 of the Internal Revenue laws, applies to natural persons only, and in no case to what are known in law as artificial ones. The decision of Commissioner DELANO is one affecting not only the interests of the Shaker community of Ohio, but corporate societies throughout the United States whose income is indivisible, according to the objects of their organization or the terms of their charter. The opinion of the Commissioner covers twenty-five pages of letter paper closely written. It is an exhaustive review of the whole question, and will undoubtedly take many by surprise, since it is a subject that has never been discussed. The previous rulings of the Department were supposed to be final, but the State Supreme Court of Ohio has recently decided against the very claim of the Shaker Community, and upon which the opinion of the Commissioner is based. According to the laws of Ohio, whenever a majority of persons residing in a county desire the construction of a turnpike, the County Commissioner is authorized to do the work. It appears that certain residents of New Lebanon petitioned for the construction of a road through the grounds of the Shaker settlement, and to defeat the petition each of the members of the Community signed a remonstrance against it. The question was then raised whether the individual members had a right to sign the remonstrance, as they were not freeholders, and could not claim any share in the property of the Community, everything being held in common The State Supreme Court of Ohio decided that the Community was clearly within the meaning of what is known as an "artificial person," and therefore entitled to but one representative. In making annual returns they have been represented by one PETER BOYD, who reported their income for 1868 at $59,296 72, and the amount of their exemption at $30,063 57. This included $46,000, the exemption claimed by the forty-six covenanting male members of the Society. According to section forty-four of the Internal Revenue laws it provides: "And any word or words in any and all parts of this act, and of all acts to which this act is additional, indicating or referring to person or persons, shall be taken to include partnerships, firms, associations, bodies corporate or politic, or any other party whatsoever, when not otherwise designated or manifestly incompatible with the intent thereof." The Commissioner maintains that the Shaker Society is in this sense an artificial person, and the only one who can claim exemption is the representative of the Society. The same ruling will also apply, it is presumed, to all communities holding property in common, as well as to all corporate bodies, whose annual income exceeds the amount exempted by law. These are a large number, and prominent among those mentioned are the Trinity Church Corporation in New York and the Board of Trustees of Harvard College.

Improvement of South Boston Flats.

The negotiations of the Boston Wharf Company, the Boston, Hartford and Erie Railroad Company, and the Commonwealth, were consummated yesterday, when the papers were executed, all of which are on record at the Registry of Deeds. This is the initiatory step to the improvement of the South Boston flats and the creation of a new territory which will prove of great value to the city and profitable to the Commonwealth. Its main advantage, however, will be the additional accommodation which it will afford to our railroads, and the new water front which will be created will promote the commercial facilities of the city.

In accordance with an act passed at the recent session of the Legislature, the Boston, Hartford and Eaie Railroad Company was authorized to issue bonds to the amount of twelve hundred thousand dollars to pay for land and flats, by or for it, of the Boston Wharf Company, and said bonds may be secured by a mortgage of the premises so purchased. The Governor and Council yesterday gave their consent to the issue of the amount of bonds in payment of land conveyed by the Boston Wharf Company to the Boston, Hartford and Erie Railroad Company.

The Commonwealth has sold to the same company flats to the amount of $545,505, and, in accordance with the provisions of Chapter 540 of the General Laws of 1869, the Governor and Council have perfected an agreement in regard to the filling of the same, and the erection of sea wall around them. Great care has been taken to perfect the security provided for by the act.—*Boston Journal*, July 27.

Transportation of Goods in Bond.

It appearing by a report received from special agent D. G. Lobdell that the restrictions contained in the ninety-ninth article of revised warehouse regulations of October 30, 1868, requiring cars, vessels and boats to contain "no other goods" except such as are in bond, tend to embarass and prohibit the transaction of the legitimate business of transportation companies in the use of railroad cars, steamboats and other vessels; and further, that the cording and sealing of packages of merchandise, where carried under proper manifest from place of shipment to a port or place of destination under customs locks or seals, occasions delay and unnecessary expense. The said article 99 of the regulations referred to is hereby amended so as to read as follows:—

ARTICLE 99. The cars, vessels or boats upon which merchandise is laden must be secured and sealed, or locked, in the same manner as cars conveying goods coastwise across foreign territory, and they must pass through by a continuous route from the port of importation to the port of exportation without delay and without being opened. When dutiable merchandise is transported in bond over a bonded route, such merchandise must be corded and sealed or branded and sealed and marked or labelled, as provided in articles 58 and 92 of revised warehouse regulations of October 30, 1868, and in additional regulations of February 16, 1869, unless the transportation be made by a continuous route, without change of car or vessel, under customs locks or seal from the place of shipment to the port or place of destination; so that if dutiable merchandise in bond is to be carried from the port of shipment to the port of destination in cars or vessels under customs locks or seals, by a continuous route, without opening or change of cars or vessels, the cording and sealing of packages will not be required.

GEORGE S. BOUTWELL,
Secretary of the Treasury.

New Jersey Western R. R.

The New Jersey Western Railroad Company, which is authorized to construct a Railroad from Jersey City, or some other point on the Hudson River, running westwardly across the State, through Bergen, Morris, and Sussex counties, to any point on the Delaware River, in the latter county, and also to construct branches in either direction from the main line, have now a force of about 1,300 men at work between Paterson and Bloomingdale, a distance of 15 miles, which portion of the line it is expected will be completed in October. The company are now prospecting a route from Bloomingdale west, passing through Sussex county to the Delaware river at a point nearly opposite Milford, Pa., where it branches off northerly to form another connection with the Erie at Port Jervis, and southerly to the coal mines at Scranton, Pa. It is understood that the Erie Railway Company are co-operating with this company in putting the road through from Paterson to Port Jervis, with the intention of using it for a through passenger route, and devoting the Eastern Division of the Erie principally to the transportation of freight, as there is a saving of a distance of 24 miles between New York and Port Jervis by the proposed route.

Adjustable Gauge Cars.

At Point St. Charles, on the line of the Grand Trunk Railway, takes place the shifting of the adjustable cars which run between Milwaukee and Boston. The Northern line of railways between Boston and Montreal have the narrow gauge, while the Grand Trunk has the broad gauge. A shed built over the track protects the workmen who do the shifting, from rain and snow. A pit, about four feet deep, has been excavated between the rails, in which the workman, with hammer and wrench takes his position. The track at the western end of the building is of the broad gauge, but gradually diminishes to the narrow gauge at the eastern entrance. Each wheel on the right side of the car, instead of being immovably fixed on the axle, by the unscrewing of a nut and loosening of a bolt, may be moved in upon the axle. It is but the work of a moment for a mechanic in the pit beneath the car to unscrew the nuts, and then the train, being slowly backed by the engine, the right hand wheels of each car are gradually crowded in by converging rails till they are brought to the narrow gauge A few turns of the wrench and the wheel is firmly fastened and the car ready to move on to Boston. In changing from the narrow to the broad gauge a third rail crowds the wheel outward to the desired width. It takes about eight minutes to make the change. The cars are owned by a private company, who have several hundred on the line, and are building more to meet the increasing through traffic.

Canadian Pacific Railway.

Mr. J. C. Keefer of Ottawa has been writing a series of letters for the Montreal *Gazette* in advocacy of a Canadian Pacific Railway. Mr. Keefer's project is to extend the Ottawa Railroad right on through the Ottawa Valley, round the head of Lake Superior, through to the Red River along the Saskatchewan Valley and finally through one of the passes of the Rocky Mountains to the shores of British Columbia. Mr. Keefer without doubt has the interests of Ottawa and Montreal at heart in the great scheme which he advocates. But it would not be difficult to show that the eventful realization of some such scheme as he champions will ere long be found an absolute necessity for the healthful progress of the Dominion.

From the shores of British Columbia on the Pacific to the Eastern boundaries of the Red River territory near the Lake of the Woods such a line of road would pass through a wonderfully rich and beautiful country, capable of sustaining very many millions of people in great comfort. But from the Lake of the Woods toward and around the head of Lake Superior, till a route emerging from the Ottawa Valley be met, the country is hilly and rocky for the most part, though large portions of it are believed to be exceedingly rich in mineral treasures. The Ottawa Valley contains a considerable portion of good land and is splendidly timbered.

It seems that under former legislation involving large land grants in aid, a considerable extension of the railroad might be effected through the Ottawa Valley. Mr. Keefer urges that steps should be at once taken to render this legislation available for the object originally proposed to be furthered by it. Mr. Keefer also thinks that if the Ontario Legislature would unite with the Dominion Parliament in granting a considerable quantity of land along the route which a Canada Pacific Railroad would necessarily take, the project might quickly be launched successfully. He thinks also that the British Government might be induced to aid such a needful and important line of communication as he pleads for.

It seems to us that railroad communication direct between Montreal or Toronto and the Red River settlements is a far greater necessity to the Dominion than a Huron and Ontario Ship Canal or a Georgian Bay and Ottawa Ship Canal. Either of these grand projects would no doubt greatly benefit certain Dominion interests. But those projected canal enterprises fade into insignificance in comparison with the claims of railroad communication all the year round with our grand North West. That being the case, surely it is possible to utilise a certain portion of the unoccupied public lands in Ontario and the North West speedily to press forward the construction of what would prove a most important link in a great Canada Pacific Railroad. Neither the Ontario Government nor the Privy Council of the Dominion can act with too much energy in this pressing matter. Its successful treatment would prove of incalculable advantage to the Dominion.—*St. John News.*

The Brooklyn Bridge.

There is just now, and for the first time made public, a report, by Mr. S. B. B. Nolan, civil engineer, on the late Mr. Roebling's plan of a suspension bridge across the East river. Mr. Nolan is adverse to the plan. He says, first, that the span being 1,600 feet and the height 135 feet the natural sag of the suspension chain would be as one to sixteen; hence in the distance of 1,600 feet of the catenary curve, one in sixteen, would produce a sag of 100 feet, leaving only thirty-five feet for water way. Again, he calculates the height, thickness and depth of foundation of the piers; that the weight of the piers would be 72,603 tons, and the area of each at the base line being 4,660 feet the pressure of the structure on each superficial foot would be 15.58 tons, while the pressure allowed in railroad engineering is from three to four tons per superficial foot. The weight of the superstructure, without cables, will be 2,675 tons, stretched over a space of 1,600 feet; the leverage strain on the centre will be as one to eight by progression, so that one ton in distance from the abutting point is increased in its gravity to eight tons in the proportion of one foot to eight feet The set strain at each deflection, says Mr. Nolan, has now caused the Niagara Suspension Bridge to sag four inches from its former constructed catenary curve, the sine line being increased to nine inches at noon, while it was but five before, and this on a span of only 800 feet. He claims that the principle of suspension bridges has been superseded in Europe by the tubular bridge, and he submits a plan of such a bridge, with arches indestructible, of 500 feet span and 200 feet above high water mark.—*N. Y. Herald.*

Mobile and Montgomery Railroad.

The consolidation of the Alabama and Florida and Mobile and Great Northern Railroad Companies having taken effect on the 1st of May, 1868, no reports were made of the operations of those roads at the usual time; and this, the first annual report of the Mobile and Montgomery Railroad Company, is in lieu of the 16th annual report of the former, and the 10th of the latter company. The receipts from operations of the road for the year ending April 30, 1869, were as follows:

From passengers		$165,420 49
" freight		216,652 62
" express matter		14,867 42
" U. S. mail		18,600 00
" government transportation		20,000 00
" other sources		10,381 26
		$445,921 79
Expenses, viz.:		
Conducting transportation	$97,061 22	
Maintenance of way	106,732 06	
" cars	30,731 22	
Motive power	80,044 80	
Steamboat and ferry	29,525 58	
Government taxes	4,021 44	
		348,116 32
Leaving net		$97,805 47

—a fraction under 22 per cent. of the gross receipts. The president in his report says:

By the action of the stockholders of the Alabama and Florida Railroad Co., on the 10th of March, 1868, and of the stockholders of the Mobile and Great Northern Railroad Co., on the 13th and 14th of March, 1868, the consolidation of the two companies was agreed upon; and it was deemed advisable to begin with as little delay as possible to work them under one organization, which was therefore commenced on the 1st of May, 1868.

The consolidation was legalized by an act of the legislature of Alabama, approved August 5th, 1868, and in accordance with the provisions of the act, due notice was given, and the name of the Mobile and Montgomery Railroad Co. adopted on the 1st of October, 1868.

The receipts of the road from the 1st of May, 1868, up to the 30th April, 1869, were $445,921 79; and the expenses, $348,116 32—leaving a net income of $97,805 47; which is a much more favorable result than could have been expected. The outfit was inadequate to meet the demands on the road for transportation, and the Board was not warranted in contracting new debts until it could be ascertained whether the creditors of the old companies would accept the terms offered. Upon the success of the plan of consolidation depended the existence of the new company, and no progress could be made in arranging the debts of the Alabama and Florida Railroad Co. and the M. and G. N. with the preferred stock and bonds of the new company, as proposed, until authority could be obtained by an act of the Legislature, to issue such stock and bonds, and but little could be done until after the first day of October. To fully submit for your information what has been done, it will be necessary to report the condition of the two companies, as shown by their books on the 1st of May, 1868, and what is their condition now under the name of the Mobile and Montgomery Railroad Company.

On the 1st day of May, 1868, the debts of the two companies were as follows:

Alabama and Florida Railroad Company:		
First mortgage bonds	$300,000	
Estimated unpaid interest	85,000	
		$385,000
Bonds endorsed by directors	$83,000	
Estimated unpaid interest	32,000	
		115,000
Second mortgage bonds	$550,000	
Third mortgage bonds	300,000	
Income bonds	304,000	
Estiimated unpaid interest	200,000	
		1,354,000
Floating debt		375,000
		$2,229,000
Mobile and Great Northern R. R. Co.:		
First mortgage bonds	$38,000	
Floating debt	160,000	
Debt of City of Mobile	536,000	
		734,000
		$2,963,000

Of which $2,427,000 was bearing 8 per cent. per annum interest, and requiring a net income of $194,160 to meet it.

In settlement of the various classes of the debts of both companies, there has been issued $1,738,700 of Preferred Stock, and $109,000 of First Mortgage Bonds. The Preferred Stock is conditioned to pay eight per cent. per annum, provided it is made in the current year over and above all expenses and interest, but not otherwise; or, in other words, all that is made in any current year, over and above expenses and interest, will be paid to the Preferred Stock, until it pays 8 per cent., and any surplus in any one year, after paying 8 per cent. to the Preferred Stock, goes to the common stock, but there is no accumulation of interest on the Preferred Stock.

The debts now outstanding of every class, and in the names of the several companies, are as follows:

In name of Ala. & Fla. R. R. Co.:		
First mortgage bonds and interest		$385,000 00
Floating debt		14,510 57
Endorsed bonds and interest		115,000 00
Second and third mortgage and income bonds		94,800 00
		$609,310 57
In name of Mobile & G. N. R. R. Co.:		
First mortgage bonds	$38,000 00	
Floating debt	34,039 16	
		72,039 16
In name of Mobile & Mont. R. R. Co.:		
First mortgage bonds	$109,000 00	
Floating debt	213,673 18	
		322,673 18
		$1,004,022 91
From this deduct the second and third mortgage and income bonds of the Ala. and Fla. R. R. Co., outstanding, for which preferred stock will be given		94,800 00
And you have the sum of		$909 222 91

as the interest-paying debt of the company on the first of May, 1869, against $2,427,000 on the first of May, 1868.

Of the debt outstanding of $909,222 91, there is in the new mortgage bonds having 20 years to run, the sum of $109,000. Leaving yet to be arranged $300,222 91.

Our means to do so, are the new first mortgage

8 per cent. bonds for $1,141,000, remaining on hand of the issue of $1,250,000.

The first debts to be arranged are the First Mortgage Bonds of the Alabama and Florida and Mobile and Great Northern Railroad Companies.

The First Mortgage Bonds of the Mobile and Great Northern Railroad Co., which were originally issued for $200,000, are all in the possession of the company, with the exception of $38,000; these are nearly all held by parties who are known to the Board, and who will not dispose of, but hold them, to be settled by the company.

The First Mortgage Bonds of the Alabama and Florida Railroad Co. were issued in 1857, for $300,000. They were guaranteed by the Atlanta and West Point, and Montgomery and West Point Railroad Companies, and became due in 1867. Since that time $290,000 of these bonds have been taken up by the endorsing companies, and with the past due interest, now amount to about $375,000. They are held by the Hon. John P. King, of Augusta, Ga., as trustee for the two companies. A satisfactory arrangement has been made with him, by which we are only required to pay by the first of July $50,000, and to pay on the first of July and January of each year, until the first of January, 1873, interest on the remaining $325,000, by which time the principal of the debt must be paid. This enables us to retain on hand that portion of our new mortgage bonds set apart for the payment of this debt, and to exercise our discretion as to the time of sale.

It will require, to provide for the cash obligations of the company between this and the first of December next, and to meet extraordinary expenses, as follows:

To pay John P. King, trustee, on account of the first mortgage debt of the Ala. & Fla. R. R. Co.	$50,000
To pay the first mortgage bonds of the Mobile & G. N. R. R. Co.	38,000
To provide for Floating Debt	200,000
To provide for increase of outfit and repair of road	100,000
Making the sum required	$388,000

And which we hope to be enabled to do by sale of a sufficient amount of the first mortgage bonds. If we can succeed in doing so, the company will be entirely clear of a very large portion of the floating debt. The first mortgage debt of both the old companies will have been satisfactorily arranged, and the only debt remaining unsettled will be the bonds of the Alabama and Florida Railroad Co., endorsed by the Directors of that company, and which now amount, with past due interest, to about $115,000, and which we feel confident can be settled on very satisfactory terms.

The ready acquiescence of the holders of the second and third mortgage and income bonds of the Alabama and Florida Railroad Co. in the plan proposed for relieving the company from its hopelessly embarrassed condition, has been very gratifying, and we hope by the close of the coming Railroad year they will be remunerated by dividends on their stock. It was the only plan by which the creditors of that class could save any thing, or the interest of the old stockholders of the road be preserved. A past due interest debt of upwards of $200,000, and its accumulation at the rate of about the same sum annually, would have forced the sale of the road and property of the Alabama and Florida Railroad Co. to pay the first mortgage and endorsed bond debt, amounting, with interest, to upwards of $500,000, and have left but very little for any other class of creditors.

The total receipts for the past year have not been as large as was expected at the opening of the railroad year; indeed, they have been smaller in amount than in any year since the first opening of the line. The very short crop of cotton, showing a movement of 25,027 bales less on the road than in the previous year, will account to some extent for the decrease in receipts; but even with so large a decrease in the gross income, the net savings have been sufficient to provide for the payment of interest on the present debt of the company.

Considering the consolidation as nearly perfected, and the financial affairs of the company being now in a manageable condition, steps will be at once taken to thoroughly repair the road and increase its outfit.

The credit of the entire line has been improved, and we now enter upon a new railroad year in a condition which we hope will enable the Board to improve every department of the road, before its close.

The future of the company, we think, is very encouraging. The speedy completion of the South and North Alabama Railroad from Montgomery to Decatur is placed beyond all doubt, and the opening of it to Lime Kiln, on the Selma, Rome and Dalton road, may be relied on as early as April, 1870. Some increase of business on your road, we hope, may come from the Western Railroad, connecting Montgomery with Selma, to be completed within this year, and if any road in Alabama pays a dividend to its stockholders, yours must, for it now has a smaller debt per mile on it, (only about $7,500,) than any other road in the State, and with only a gross income of $750,000, and expense of $400,000, a net income would be left of $350,000, which would pay interest upon the debt $100,000, and a dividend of 8 per cent. upon both preferred and common stock.

The company have 21 locomotives, of which 9 are in good order, 6 in running order, 4 in shops for repairs, and 2 waiting general repairs. Four have been contracted for to be delivered in September. The rolling stock consists of 6 first class and 5 second class passenger, 3 baggage, 3 express, 101 box, 47 platform, 6 ditching, and 31 pole and hand cars. Ten more box cars are in process of construction, to be delivered very soon. About 75 freight cars should be purchased before the Fall trade commences. At least 60,000 cross ties are required to cover de preciation.

The following is a consolidated statement of the condition of the Mobile and Montgomery, Alabama and Florida, and Mobile and Great Northern Railroad Companies, May 1, 1869:

Liabilities.		
Preferred 8 per ct. capital stock of Mobile and Montgomery R.R. Co.		$1,738,700 00
Common capital stock in name of—		
Mobile and Montgomery R.R. Company	$1,020,800 00	
Alabama and Florida R. R. Co	179,700 00	
Mobile and Gt. Northern R. R. Co.	71,300 00	
		1,271,800 00
Debts due in name of M. & G. N. R. R. Co.—		
First mortgage bonds	$38,000 00	
Floating debt	34,039 16	
		72,039 16
Debts due in name of M. & M. R. R. Co.—		
First mortgage bonds	$109,000 00	
Bills payable	157,583 54	
Floating debt $85,674 89, less $29,585 25 due M. & M. R.R. Co. on open account	56,089 64	
		322,673 10
Debts due in name of Ala. & Fla. R. R. Co.—		
First mort. bonds and interest	$385,000 00	
Endorsed bonds and interest	115,000 00	
Second mortgage bonds.	40,500 00	
Third mortgage bonds .	46,000 00	
Income bonds	8,300 00	
Floating debt	14,510 57	
		609,310 57
Total		$4,014,522 91

Assets.		
Cost of 164 miles road bed, and all appurtenances thereto, from Montgomery, Alabama, to Tensas		$3,429,717 39
196 passenger and freight cars		141,037 99
Car factory, materials, tools, &c.		18,884 28
21 locomotives		214,000 00
Machine shop, materials, tools, &c.		45,461 98
Depot buildings, machine shops, section houses, etc.		99,201 40
Machine and car shop supplies on hand		5,002 00
Roadway materials on hand		10,371 00
Steamer Sumter		11,000 00
Steamer St. Elmo		31,789 86
Cash on hand		8,557 41
Total		$4,014,522 91

President.—Charles T. Pollard.

Vice President.—L. M. Wilson.

Directors.—Charles T. Pollard, George Goldthwaite, John W. Durr, Walter H. Crenshaw, Wm. A. Ashley, Wm. D. Dunn, L. M. Wilson, I. M. Muldon, John Reid, Jr.

Eng. and Gen'l Sup't.—G. Jordan.

Secretary & Treasurer.—J. J. Beasley.

Quincy and Nebraska Railroad.

To the Editor of the Railroad Journal.

Sir—I have just read in your paper that the Common Council of Quincy, Illinois, have voted $250,000 to the above Railroad.

This same city of Quincy, Illinois, has formerly assisted many of its railroads with its bonds, and its own wealth and prosperity has been largely increased thereby, but it is well known that for many years it has been ungrateful enough to forget to pay the interests on such bonds.

To "be just before you are generous," is a maxim quite out of fashion in that city, and it behooves all capitalists to bear that in mind.

P.

London, July 23, 1869.

Pittsburg, Mt. Vernon, Columbus and London Railroad.

At a meeting of the stockholders of this company at Orrville, Ohio, on the 27th ult., the following gentlemen were elected directors: Wm. M. Orr, J. Harpster, R. C. Hurd, G. A. Jones, Samuel Israel, Charles Cooper and Thomas D. Messler. At a subsequent meeting of the directors, R. C. Hurd, of Mt. Vernon, Ohio, was elected President. We are informed that the "amount of stock required along the line of the road is nearly all subscribed, and the new company feels quite confident of perfect success. The completion of this connecting link from Millersburg to London will open up a new route from Pittsburg and Cleveland to Columbus and Cincinnati, through the great coal and mineral fields of Wayne, Holmes and Knox Counties."

☞ The Commissioner of Internal Revenue has decided that where persons purchase old rails, re-roll them and then sell them to railroad companies, they are to all intents and purposes manufacturers of new rails, and as such liable to the special tax of two dollars upon all such sales in excess of $1,250 per quarter, under section four of the act of March 31, 1868.

☞ The Indianapolis *Journal* says it is proposed to extend the Indianapolis and Peru Railroad to Angola, the county seat of Steuben County. The distance from Peru to Angola is estimated to be about eighty miles on a direct line, through the counties of Miami, Wabash, Whitley, Noble, DeKalb and Steuben.

American Railroad Journal.

Saturday, August 7, 1869.

Stock Exchange and Money Market.

Money has been in quite liberal supply and generally easy in price, since our last, on the basis of 5@7 per cent. on call and 7@9 per cent. per annum in the discount form. The city banks, as well as private lenders, have been making freer advances, and have added nearly a million to their loan and discount averages, while they have had their deposits increased about 2¾ millions and their legal tender reserve about 1⅞ millions. They reduced their specie average about 2¼ millions. The U. S. Sub-Treasury closed the week and month with a cash balance of $96,621,590, as against $84,592,816 on the 1st of July. Of this balance, $77,383,685 were in coin or coin certificates, and $15,000,231 in currency. The general balance includes transfer accounts, bonds purchased and not stamped, scheduled and forwarded to Washington, being purchase of 28th and 29th of July. Assistant Treasurer Butterfield has made an important reform in the manner of reporting the daily transactions of the Sub-Treasury. He now gives separately the exact amount of the gold and currency receipts, payments, and balances, each day. The reform began on Saturday. The coin in the ownership of the Treasury Department at the close of July was $66,405,770, and on private deposit, in the Treasury vaults, $36,725,840, making the aggregate coin reserve on the 1st inst. $103,131,611 against $110,202,713 on the 1st of July 1869. The currency reserve of the Department at the beginning of August was $23,381,654, against $37,097,819 at the commencement of July. The U. S. Sub Treasury closed on Tuesday with a coin reserve of $77,994,936 and a currency balance of $15,362,498. The coin reserve in the Boston Sub-Treasury on the 1st inst. was $1,322,782, or $19,503 less than a week previous.

The specie reserve of the city banks according to the latest return is $27,871,933, against $20,502,737 same time last year. The city bank deposits are now $196,416,443, against $228,104,867 week ending Aug. 1, 1868. The legal tender reserve amounts to $56,101,627, against $73,638,061 same time last year. The circulation now stands at $34,068,677, against $33,957 305 same time last year. The loans are now $260,530,225, against $279,311 657 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $102 409,248 a day, against a daily average of $93,975,840 the preceding week, and $118,554,690 the week ending with July 17, 1869. The current week's exchanges average about $108,550,000 a day. The city banks, last week, reported a loss of $2,207,491 of specie, with an increase of $2,794,183 of deposits, and $1,829,765 of legal tender notes. They increased their loans, $888,336; and reduced their circulation, $42,1 21.

The city bank exchanges on Wednesday were $103,507,190, and the resulting balances, $4,231,107.

National Bank notes to the amount of $219,640 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $316,820,670, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $17,037,860, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,659,260,) an actual circulation at this date, of $299,782,810. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $343,307,200; and for the public deposits, $21,504,500—making a total of $364,811,700. The Treasury Department last week redeemed and destroyed $343,816 of worn and mutilated fractional currency, and issued $92,626 of new. The outstanding amount of fractional currency on the 1st of Aug., was $31,030,300 against $32,062,528 on the 1st of July.

The U. S. Sub-Treasury receipts, week ending with July 31, were $10,794,473, including $2,388,449 from customs duties; payments, $11,312,906, including $1,256,836 of coin interest; balance at the close of the week, $96,621,590, against $96,079,045 at the close of the preceding week, showing an increase of $542,445. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $1,258,798, including $299,645 from customs, and payments, $599,615, including $224,738 of coin interest. On Tuesday, receipts, $993,419, including $554,000 from customs, and payments

$678,084, including $121,758 of coin interest. The balance at the close of business on Tuesday stood at $94,192,874, including $15,362,498 of currency, and $77,994,935 of coin against $98,226,186 a week previous; and $95,559,102 on July 21, 1869. The aggregate receipts of the office in July were $88,513,855 including $16,502,046 from customs; aggregate payments, $76,502,624, including $17,384,486 of coin interest.

The outstanding amount of coin certificates on the 1st of Aug. was $36,725,840 against $30,489,640 on the 1st of July. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $563,937 and retired $2,262,449 through the receipts for customs.

Government revenues have been on a somewhat reduced scale since our last, but yet very liberal for the Summer season. The excises, last week, yielded about 4¾ millions; customs at the port of New York, $2,388,449, and at the outports about $775,000 (in coin) more, making the grand total income for the week equal to about $9,099,742 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 23 millions. In July they amounted to precisely $21,587,000 against only 16 millions, same month last year.

Gold has been more abundant in the open market, and has been in less confident speculative demand at from 138⅜ to 136⅝, closing on Wednesday at 135⅝. The export drain has been light, checked by the increased offering of foreign exchange, and the depression in the price of bills. The customs inquiry has been moderate, averaging about $400,000 a day at this port. The customs receipts here in all July were $10,502,046 against $9,565,594 in July of 1868. The coin interest disbursements averaged about $210,000 a day, last week, and were up to $17,384,486 in all July. Government will market two millions of gold, in the current month of August, according to the announcements already made. One of these millions were disposed of on Thursday, the 5th inst. The specie exports on Tuesday were only $50,000; on Wednesday, half a million.

The following is the statement of the New York Gold Exchange Bank for the week ending Saturday, the 31st day of July, 1869:

Average am't of loans and discounts	$1,528,594
Average amount of specie	649,451
Average amount of deposits	1,386,249

The customs of the port on Wednesday yielded $578,000. The U. S. Sub-Treasury disbursed $230,876 of coin interest, on that day.

The customs revenue at the port of Boston last week was $329,891.

The customs demand for Gold last week, averaged $398,075 a day; thus far, this week, it has averaged $426,822 a day, or equal to a weekly aggregate of $2,560,932. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $19,469, and since Jan. 1, $9,767,172, against $4,065,006 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $75,425,595, again $66,470,956 same time in 1868. At San Francisco, from Jan. 1, to July 15th, 1869, $4,085,421, against $4,385,731 same time last year.

The exports of specie, from this port, last week, were $631,765, against $735,592 same week last year; total, since Jan. 1, 1869, $21,926,506, against $59,638,157 same time last year. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $1,256,836, and since Jan. 1, 1869, $62,997,887, against $59,065,580 same time in 1868. The specie exports from San Francisco, from Jan. 1, to July 16, 1869, were $22,439,532, against $21,780,419 same time in 1868. The *Alaska* from Aspinwall delivered $65,833 of California gold, here, on Monday.

The U. S. Treasury receipts from customs at all ports from July 1, to July 31, were about 16½ millions.

Foreign exchange has been in better supply and less request at rather easier rates. Bankers' prime sixty day bills on London closed on Wednesday at 109⅝@110⅛, and on Paris to 5.18¾@5.13¾; sight bills on London to 110⅛@110⅝, and on Paris to 5.13¾c.@5.11¼. The offering of produce bills has been fair this week. The week's exports of domestic produce have been to the currency value of $3,934,358, making the total since Jan. 1, 1869, $108,890,473, against $99,079,580 same time last year.
